Nobody can predict something about China. Anyway the problem is not that one, it's that when the CW test will be abolished in the ITU-RR, there will be no more barrier for many hams to SPEAK on HF bands. No importance if the non-ham citizens are interested or not ...

Recently FRANCE was sentenced by the European Court of Human Rights about a right coming from the 29 July 1881 law about Press, allowing the french Minister of Interior to forbid and destroy publications in a foreign language published on the french territory. The Court considered that this absolute right was not compatible with article 10 of the European Convention about Human Rights allowing the liberty to communicate freely.

So, a wind a free communications blows in Europe ... CW will be a next target to shoot in that Court.

2002 is yet here, it's 1:41 a.m 01/01/2002, so I wish you a happy new year from FRANCE !

>I disagree, Jim. While what you say is technically correct, it is most
>certainly the exception to the rule.

Well, I've been told by several VEs that in the 1990-2000 time period the rate of medical waiver applications was about 10%. Some VEs said as high as 20%. That's a LOT of exceptions!

> Would you agree that during
>pre-restructuring amateur radio licensing, at least one ham has "bought"
>his/her way past the code?

I don't know, but I DO know that the vast majority of VEs cannot be bought.

>Of course, we know this because of the reported

>irregularities of late.

We do?

> Remember the Puerto Rico VEC fiasco of the early
>80's?

Nope.

>Heck, it could've even occurred when the FCC still did the testing. FCC
>personnel aren't infallible. (Isn't that right, Bert?)

Your point seems to be that some pre-restructuring hams may have cheated. My point is that many pre-restructuring Advanceds got their licenses without cheating and without passing 13 wpm.
>
>My point is that these scenarios are the exceptions, not the rule.

10-20% is a lot of exceptions.

>If we were
>to give the exceptions the same weight as the rule, then everyone's Tech plus
>or higher could be legitimately questioned.

Everyone's claim to 13 or 20 wpm can be legitimately questioned. In my case,
all questions are easily answered by a demonstration. Just like in August 1970.

> I remember seeing an
>advertisement

>
>Some would consider this some very prime real estate.

Oh yeah - that's one of the reasons I got the big E way back then. Another was
the fact that it was cheaper for me to get the Extra than to build a 25 kHz
calibrator so I'd know where the subbands ended.

You are correct - _Kotko v Briney_ was a 1971 Supreme Court of Iowa
case. The interesting sequel was that the looter later had to go to
bat for the farmer to keep him out of bankruptcy long enough to get
the damage award paid.

To us westerners, all states between Pensylvania and Nevada
blend into one.

Maybe in some faiths but not in ours. We hold that the duration is
"..for as long as both want the marriage and its benefits to last".

There is far more religious ("canon") law about what a valid vs.
invalid divorce is than about what a valid vs. invalid marriage is,
and a serious scholar of religious law studies divorce law before
s/he studies marriage law.

We believe that marriage is not a jail.....

After you have done the 459 miles it takes to get 'Welcome to Wyoming'
you would be forgiven if you blended it together. Some years ago the
Game, Forestation, Parks, and Tourism Commission (no kidding) came up with
the infamous Nebraskaland, Where the West Begins slogan complete with the
traditional oxen, covered wagon, hardy pioneers etc heading into the sun.
Some of the locals had a case of the tights with the grand poobah thereof
and came up with a bumper sticker of their own.

It featured the same oxen but near death from exhaustion, a covered wagon
with four wheels going in five directions, pioneers that looked like
Snuffy Smith heading into a blazing sun with the caption: Nebraskaland,
Where the East Peters Out. Closer to the truth.

Besides most Nebraskans came on the train after a Kunte Kinte Klass ride on a steamship paid for by a railroad and were kicked off the train. The covered wagons ran only about 6 weeks a year on the Oregon trail at any given point, were rarely out of sight of each other, and the largest cause of death was being shot in the back when the idiot behind you with Grandpa's old percussion cap rifle left it in full-cock and hit a bump. Phil, you are now living among the progeny of the survivors of that bit of idiocy -- be careful!

Dick, Bionic Klutz

Still done that way for most rolling stock. Both cars and locomotives are often
not owned by the RR itself, even though they have the RR's logos on them.
>
>Railroad attorneys, including one Abraham Lincoln, were among the best
>lint-pickers, gnat-strainers, camel-swallowers, loophole pullers, and

Hence the name. PRR's Hq was always in Philadelphia. But nobody around here
said "Pennsy" or "PRR" - it was always just "The Railroad".

VCR alert: The local PBS station is going to show a new special on the PRR
mid-January. Hopefully it will make the rounds.

>Lincoln convinced a court that a low railroad
>bridge across the Mississippi was not really a hazard to navigation
>because the owners could put hinges in the smokestacks.

You mean they can't?

>He was from
>Illinois but with that performance he deserved Philadelphia.
>
PRR didn't cross the Mississippi anyway.

PRR was the first true mega-corporation, the first billion-dollar company, and
the first with widespread use of many engineering innovations (steel rails, air
brakes, Janney couplers, cab signals).

True story:

Back in the '80s the classic GG-1 electric locomotives were still running. Probably the best example of what the PRR could do. After 1968 they were painted in various awful schemes by the RRs that inherited them (Amtrak, Conrail, NJDOT). A group of railfans banded together and raised money to restore one to its former glory. GG-1 4935, the very last one built, was fixed up and painted in the original Tuscan red and gold pinstripe scheme. Old stencils that had been hidden away for almost two decades suddenly showed up in the shops so that the logos and lettering would be as they were originally.

A special train was commissioned for the "first" run of the restored 4935 originating in Washington Union Station. Vintage private car 120 was on the rear, with its classic open vestibule. Speeches were given from the rear platform of car 120 in classic whistle stop fashion.

The last speaker on that day was one Nelson Bowers, who had a major role in keeping the project moving forward through the various bureaucracies and red tape. He thanked all who had helped and concluded with the following:

"And now, after much hard work and dedication, we have one GG-1 locomotive restored to its proper condition, as God and the Pennsylvania Railroad intended".

The crowd went wild.

Then there's the story of Upton Station..

Larry, sometime when you are suffering from Terminal Boredom find
something on Myers-Briggs Personality Type and let it flow. You may have
encountered it learning to be a fixture in Human Refuse.

To oversimplify, it determines a classification on four binary scales:
a. Inner vs Outerworld Focus. I am a wierd Outerworlder but barely. E
or I
b. Information Inhalation: direct serial sensory or parallel big
picture. I am a picture thinker which is called an iNtuitive as opposed
to a Sensor.

c. Decision basis. Thinking or Feeling which actually does vary between sexes. We both tend to be strong Ts with an aversion to calling a manure pile a fertilizer storage facility.
d. And how does one go about daily existence? Plan, method, closure or open-end, casual, and adapt to anything. As a Judger or Perceiver in their nomenclature. I am a classic P

So I am an ENTP. Would not presume to guess at E or I in your case but the general population odds favor E. Suspect an S in the second, a T, and more than likely a J.

So I am an ENTP and for the nonce think you might be an ESTJ. You are more common.

Concentrate on my NP and your presumed SJ tendencies. In a job, you are the classic administrator where I am the classic theologian and neither of us is all that people-oriented nor in my case have much of a clue what it even means other than to be what in my HS days was called a Fenwick, the 'good guy' who would not complain if you pissed on his blue suede shoes. There is a big diff between a theologian and the parish priest. Diffs we have had to deal with with varying degrees of success in varying circumstances.

As it happens, EN types tend to be more common in Academe where we flunk out the SJs at an alarming rate until we get a job and get canned by the SJ people as useless overhead. Such is what makes the world spin. What is really funny is that to be say the chief engineer, we have to put on the SJ hat and be a pest to those ENs who have not yet discovered that the SJs do have a point, the money for your paycheck does have to arrive in the forseeable future. Brian Kelly got to serve this role as did I which is why we tend to cynicism about the great digital future.

A fairly small group are NFs who have a major adjustment problem in the real world and tend toward what techies call Arts and Seances. Can't say if Rick is on that path or not.

It does make for a rather interesting pattern in University design that I have seen repeated on a number of campuses. I will use Nebraska/Omaha as an example. The hard science people are in the northwest corner, the Arts and Seance people are on the East side with the teachers college in the northeast corner, the jocks are on the south, and the library, student center, admin and the business school are in the middle as a buffer zone. The Engineers, IT freaks, and technowizards are across the park learning Arabic, Mandarin, and modern Japanese. C.P. Snow's two cultures on a grand scale.

So don't get too bent, Larry. Just imagine what Rick's next faculty meeting must look like.

LOL! They must've been calves, cuz I still can't see how he got 'em in
'ere> I can just see it
now; old car going down the road mashed down to the axles, bumper within
inches of the
ground. Springs broken. Tires rubbing the fenders. Maybe the deputy,
meeting this car
with "cows" in it, thought they spiked his coffee at the diner, and said to
himself, "I'm NOT
gonna say a word to anybody about this because they wouldn't believe it!"

IT is still very funny. And I believe people will try anything once.

Makes a lotta sense. Note that in the above I wrote "most ceremonies".

Rewrite all my references to "most Christian ceremonies".

Works for me!

But the state will grant a divorce for anyone - even those who have made a contract with no escape clauses.

I don't think the VEs will let you take the General written without
having successfully done the Tech first.

When you do attend a test session, take all the tests. It doesn't
cost more, and who knows, you might just pass them all. AFAIK,
they don't have "unsuccessful completion of exam" certificates.

It isn't that bad, Jerry. Say something like 250-400 max for each heifer in a six passenger car and they did not bring any luggage. Probably made one or two ride in the trunk.

What amazes me is the amount of racket he had to have made getting them in. Who needs the phone, just open the window at the county jail. Can't believe the deputy wasn't there watching for most of it.

But with the meth freaks and their well-known paranoia a deputy is well-advised to pick his spots for any kind of bust.

I don't know how they do it today. When I obtained my first tickets (novice, general, extra in 1962, 64, and 66), you had to pass the code tests before you took the written tests (at the FCC). Later, after I dropped my tickets around 1981 or 1982 and then took my tests in 1993, I took the novice, technician and was either in the middle of the technician or general written exam when we were asked if anyone wanted element 1-C. So, I took the exam papers with me and took the 20 WPM code test and then went back for the rest of the written exams. Is any order necessary today?

They clearly state and repeat the terms up front. How often do you see the CC&Rs posted on the front door of an available house, or clearly defined in the realtor's flyer?

When my YL and I moved into our current apartment, we had to hound the management to get an actual copy of the restrictions; the sheet we were supposed to sign referred to the rulebook and a few strange exceptions, but didn't include any specifics. According to its text, posession of a cell phone or cordless phone in the apartment would be grounds for eviction, but on examination of the actual rules, it was found that only antennas actually anchored in place, or extending beyond our apartment are restricted. Therefore, all my antennas are technically stored, since they can easily be picked up and moved.

>wishing to be married. It's that simple.

Moving out is a hell of a price to pay for something one was given no
notice of prior to moving in. Finding, financing, and moving into a
new house isn't like buying a different brand of toilet paper, you
know.

Answer the door naked. If it doesn't work the first time, try asking
your local butcher for some particularly identifiable parts, and have
one with you next time.

I got them kicked off the property several times at my old place.
After management had raised hell with the $cientologists jumping the
gate to put their flyers on all the cars and doors, letting any other
group proselytize would have gotten them in some legal hot water.

Depends on who you're asking. While I like the idea of having a stack
of full logbooks, I'd generally prefer one interesting 20-minute QSO
to a couple dozen swap-calls-and-reports-and-move-on contacts. That's
why I find the IRLP so darn interesting.

Now, for playing with a QRP rig and seeing what it'll do, I can find
out more from 20 minutes of callsign-and-RST than from chatting with
one guy, but then, I could find it out from more interesting QSOs with
all those stations too, it would just take longer. I'm 25, and the
licenses are good for ten years each, so I don't see a lot of reason
to get in a rush outside of contesting or the occasional
barely-above-the-noise contact where exchanging much more would be a
hassle.

I'm not even sure any of the clubs anywhere near me even have a fixed station. Most don't own any real estate whatsoever, and if they have anything resembling a station, it's a van or trailer with no permanent home.

TX Penal Code
9.42. Deadly Force to Protect Property
A person is justified in using deadly force against another to
protect land or tangible, movable property:
(1) if he would be justified in using force against the other
under Section 9.41; and
(2) when and to the degree he reasonably believes the deadly
force is immediately necessary:
(A) to prevent the other's imminent commission of arson,
burglary, robbery, aggravated robbery, theft during the nighttime, or
criminal mischief during the nighttime; or
(B) to prevent the other who is fleeing immediately after
committing burglary, robbery, aggravated robbery, or theft during the
nighttime from escaping with the property; and
(3) he reasonably believes that:
(A) the land or property cannot be protected or recovered by any
other means; or
(B) the use of force other than deadly force to protect or
recover the land or property would expose the actor or another to a
substantial risk of death or serious bodily injury.

Going hand to hand against someone trying to rob you is considered too
dangerous, and given the rarity of recovering stolen property, that
rarely enters the picture except in cases of something that's just too
obvious for them to get far with it. (The only case that comes to
mind under that exception is the guy who had his 10ft tall fiberglass
cow on a trailer stolen repeatedly - it was always recovered within 48
hours...where in the hell would they hide it, and what could they do
with it that wouldn't result in being seen?)

Not too uncommon if the person was one of the local Sheriff's least
favorite customers. IIRC, one guy was determined to have run himself
through an industrial chipper-shredder.

The only real evidence in favor of that determination was the marks on
the inside of the chute from when he tried to pull himself out,
showing that he was definitely alive when he went in.

Maybe it would be easier for you if you read what you wrote and THEN
read what I wrote. My point was and is that your suggestion to move is
often not an option at all. Many folks can't do much about where they
live. If someone becomes interested in amateur radio and finds that
there are prohibitions on any type of antenna, it would present a huge
obstacle to the enjoyment of amateur radio.

Kim, that simply does not take place often. If it does take place, you
have to be paid for the taking of your land. Often a landowner is paid
far more than he or she paid for the property. CC&R's are not put in
place by government.

> Do you have a point, Dave?

Let me suggest once again that you take the time to read what YOU wrote
and THEN read what I wrote. It may save us both a lot of time.

If a neighbor objects to an antenna or supporting structure, that is
pretty much too bad. I may not like the neighbor's paint, lawn
furniture, landscaping, Winnebago or decorative items. He did not
obtain them for my enjoyment. I certainly don't put up an antenna or
refrain from doing so for the neighbor's convenience.

Among my long lasting memories of 6m operation from West Africa will be the FD stations from France appearing on my CW operating frequency, inquiring on SSB, "Coo Air Zed?". My French is rusty so at first I thought they were simply asking, "Who is calling me?". It was obvious that no one was calling them. I corrected my translation to mean, "What is that funny beeping noise?".

"Speak on HF bands" will soon become the same as speaking on the VHF bands for the poor pathetic victims of this Euro-slavery. There is certainly *some kind of wind* blowing in Europe.

My house is "L" shaped, so I can look out of a window and see who is at the
front door without them knowing. I've often cranked up the stereo and not
answered the door, just to see their reaction.

Ah, but here's the rub: In many situations the deed restrictions are not
signed. In my case, the deed itself describes the specific property and who
owns it, then refers (in fine print) to another document that is kept at the
county seat. If you want to see the actual deed restrictions you have to ask
for them ahead of time - they are NOT part of the deed itself, except by
reference.

Right you are! Since the states regulate auto inspection, registration, etc.,
the states should exempt personal repair of autos, not the feds.

>Then fix it right the first time.

You never lived in an older (pre WW2) house, didja, Joe? Most of them were designed back when labor was cheap. They tend to need lots of painting and other time-consuming maintenance. Doing even minor jobs becomes a big deal because nothing in them is predictable or standard. Often you find serious code violations and unsafe conditions that have to be fixed NOW. Supplies for old houses are often made of unobtanium.

If "they don't make 'em like that anymore" there's usually a very good reason!

Exactly. How often do you even see mention that they exist? Mention "CC&R" to
many homeowners and they have NO idea what you are talking about.

I had to specifically request them, and it turned out that there was a page and
a half of fine-print boilerplate deed restrictions applied to all of the houses
around here. Which houses were all built between 1949 and 1951. Nothing against
the kinds of antennas I want to put up, so no big deal. But I can't have a
garden shed with a poured foundation.

To get the General license, you have to pass both the Technician and
General written exams as well as the 5 WPM CW test. You'll be
expected to pass the Technician written exam BEFORE you are allowed to
take the General written exam...

Hmmm, I don't know that I am "against" them altogether. I support any kind of sensible expectation. For instance, if a CCR stated that I wasn't allowed to keep pigs or chickens (as mine does) and, if I am not planning on keeping pigs or chickens--or if it wouldn't seem reasonable to keep pigs or chickens (middle of town), then I can go along with that. I think that is reasonable to expect from people who move into homes in the middle of town, or who move into homes without benefit of a good, long distance between them. But, CCRs that restrict such things as fences or fence-types, etc., I do have a problem with. I think a fence of any type should be able to be put up--regardless of how someone else thinks it looks.

Accidents happen and I think most people are aware of that and can yield. However, for a neighbor to plan on having a friend over for the benefit of using their driveway and garage to help the friend with repairs? No.

That's why I used the term "generally" above. There are other reasons, but
one of those is to protect "us" from having to deal with each other.

>
> > We've become

reasonable
> way.
>

Well, my idea of what a piece of property should look like may be different. I don't think it is reasonable for my neighbor down the street to have his scrapyard. If you live here, you may think differently. I also think it's pretty dumb for a city to worry about grass that is over a certain height. I like the look of tall grass. Yeah, it's a fire hazard, but let's pick apart how many other fire hazards that go un-cited by cities.

> confronting him.
>

Well, that's a good point. To everything there are probably exceptions. Actually, Jim, I am not telling him how to live. I am requesting from the county that they tell me what the limitations are. Then, I will either choose to live within their definition, or I will ask my neighbor to. I have said from the beginning of this that people need to live "within the law" on their property.

>
> Suppose the county says "We know - he's technically in violation of a few
> things. But someone must file a formal complaint before we can take any
> action". Will you file the complaint?
>

Heck, probably not. I'll just go down the street and let him know that he is violating the laws and expectations of agreements for this area, and ask

that he consider that while he makes his noise and dirties up his yard. This particular issue is not worth much more than that for me. Now, if he started having fires; or, even better: let's say my insurance company shows up and says that because of our proximity to him they are going to have to raise our insurance rate. That's a good one. What do I do? I go down the road and ask him if he wants to pay the extra insurance, or if he wants to voluntarily keep that from happening, or if he wants a citation from the county. I don't plan on moving.

We've got an ATV antenna, a dual-band VHF/UHF antenna, and mounts for a dipole (don't ask me for what bands, it's my husband's), and an Alpha Delta DXCC on the 70' tower. We've got some kind of HF yagi to go up on top to replace our ruined 10M quad, but haven't ever put it up yet.

On the 20' pushup is a Antron. On the other two pushup poles is UHF/VHF, actually one is decommisioned.

Cliff (my husband) has every intention of building a skyloop to play with. It's been one of his ham projects for a few years now, ... LOL

As Jim said, a CCR is a different animal because it can be stealthy.
However, in a HOA situation, as I noted above, that *should* be known about
prior to move-in. Right? I mean, I've never had to deal with a HOA
situation, so I don't know--I presume one is knowledgeable of an HOA in a
neighborhood prior to move-in, aren't they? I have heard folks talking on
the radio about HOAs being implemented after move-in. That would be
rough...time to build leadership skills to the hilt on that one, and take
the lead in a very sublime neighborhood contract--if any at all.

A couple of observations:

Observation #1) Every ham enjoys Federal protection of their
right to erect a TV antenna. Haven't heard any hams protesting
that protection. Several hams here have protested the idea of
extending that same protection to amateur antennas.

Observation #2) Protest or support of the idea is split right
down "party lines" here on rrap.

With all kind wishes,

de Hans, K0HB

Is it that, Joe, or is that it is legal to shoot only if you are under
threat of being harmed? I am not sure it is legal to shoot to keep someone
from getting away...?

Dave, could you *try* to have comments without the insults? My point
exactly. And, if you get interested in ham radio after you've moved into a
neighborhood or if you're kid gets interested, and there are restrictions
prohibiting the erection of antennas, then you either have to make the
decision to move or deal with what ramifications there are. There's all
kinds of what ifs to be dealt in situations, Dave. How many in life should
we accommodate?

I *think* the debate here is for people who *cannot* put up antennas or
refrain from doing so, Dave.

So? Not my problem if someone enters into such a serious amount of money
spending contract and doesn't know all the rules. I know that sounds cold,
but I'll ask you the same question I asked Dave. There are all kinds of
what-ifs that enter into life situations. How many accommodations should be
anticipated and prepared for? I didn't know when I got my truck on lease
that I was going to have to increase my insurance, because I didn't read far
enough into the contract. What line do I get in?

Kind of assumed you might be an Amateur. Two meter repeaters are on 600 kHz separation so it is shorthand for 146.25 in, 146.85 out. This is Suburban Radio Club's machine where I hung my hat in my St. Louis days. I lived off Telegraph Rd south of 255 so I know about the Great Reavis Barracks Road r.f. site. For some reason, Channel 2 always was a pain in the drain.

When I bought my present house and asked for a copy of the deed restrictions
the real estate agent had no idea where they were located. After a few days,
he mailed them to me. Just about the only things prohibited are live stock
and mobile homes.

Suggestion:

When you make an offer to purchase on a piece of property, place a
clause in the agreement or offer to purchase which basically states that
there are no restrictions
or Deed Restrictions which prohibit antennas and if there are, then the
offer
is automatically void. This allows the deal to be killed before you get
into a
bad situation. Usually, the closing attorney or the more than likely,
The Real
Estate Agent will want to make sure before proceeding, that is, get you
a copy
of the CC&Rs out of the Courthouse. Always use the escape clause to
prevent
finding yourself with an unusable property.

It's true, Dave. I knew an apartment owner ham in Tucson who
rented the adjacent vacant field for his antenna farm.

I saw the numbers on the Mailgate.org site, and thought they'd
be interesting to the group. I assume that they are automagically
calculated, as opposed to someone making tick marks on a cell
wall. (Now that sounds like a delicious punishment for someone
like Lloyd.)

With all kind wishes,

de Hans, K0HB

If someone is stealing a bicycle that your kid left in the open
front yard, you would be well advised to think twice before
shooting the perp in the back as he pedaled away.

However, if someone has broken into your home, you could
rationally justify a fear of bodily injury or death.

Actually, the debate, as originally started by Larry, was a paranoid rant about the FCC selling off the amateur radio spectrum. He thinks that the ruling means the beginning of the end for amateur radio. Notice that he's been conveniently absent from the debate since making the original post.

I have a Texas concealed carry permit. We were taught that using
deadly force on someone in a publicly accessible driveway where
only property is involved can cause more civil problems than
the property is worth. Even if it is a justifiable act under
criminal law, civil law may have a different take on it. The
cost of defending oneself in civil court may cost more than
the property is worth.

Hi all! I'm an Italian "young" amateur radio (21y.o.) and I'd like some
informations about repeaters in that HF band: which are their frequencies
and their "shift" (more or less how many kHz). Are they all in USA or in
other Countries too?
Thank you very much for your replies

It is an "in" abbreviation for tea time. Woger looks forward to tea
time with his friends each day, because it is a time when they can
relax, hold their pinkies high, and discuss the hair styles of their
other friends who were stupid enough not to show up for tea.

He thinks that law enforcement people also engage in such activities,
even though the rest of us know that only CW operators and ARRL officers
are similarly inclined.

Those that I know of are all 100KHz, xmit low. Some commonly heard ones here are 29.520 in, 29.620 out; 29.530 in, 29.630 out; 29.540 in, 29.640 out; 29.550 in, 29.640 out. See the pattern?

>Are they all in USA or in

Some groups may allow it, but obviously for element credit only. However, due to the fee structure of some VEC's, taking the General test first then filling in the Technician element may require two testing fees EVEN IF taken at the same session. Taking the elements in the normal order doesn't have that effect.

There is no order on which of the code vs. written tests is taken first.
However, there is generally an order as to the written tests themselves (and
back when there were multiple code elements, an order to them as well).

You didn't say if you temporarily surrendered your written test materials
during the code test, but IF you DIDN'T and tried to pull a stunt like that
with the VE team I test with, your written test would have been graded "as is"
at the time of the code test.

Is that why Polly the Shitting 14313 Parrot was
such a hatefull, vindictative old cur when he
was still on the radio? Had to be somethin.
No wonder he hanged out with billyjerk.

Guys, there is alawless element out there and nothing in this thread
can control it. Let the FCC deal with it and read about the fines
given out. Enough said.
Len

Watch out Kim, Larry and the other guys might make up an SAT test
style analogy:

Kim's call is to ham radio as Kim's neighbor's junkyard is to Kim's
neighborhood.

:-)

I'd think that "freedom of the press", aka in the USA as the "1st
amendment", is a lot more important than if a morse code test
is needed or not for getting a ham license. Who cares if someone
publishes a paper in Afghanastanian? You don't have to buy a copy...

I had some fool tell me that I couldn't do this or that on my property a while back, I tried to be polite to him, and to work with him be he insisted on being a real PITA. So I made a point, legally, my property is zoned as farmland, and since the town I live in has grown to include my property, they asked me if I wanted to be rezoned, and I delined for just this reason, as farmland I am not under as strict zoning laws. So my neighbor who wouldn't calm down, he got a real reason to complain, and there wasn't a thing he could do about it from a legal stand as I was within the law.

This applies to a friend of mine in Napoleon Oh. he is legally blind, and his only true joy in life is his radio shack. He moved into a trailer park where thye have a rule that says no visible antennas. Of course he signed the contract w/o consulting us or a lawyer, and when he realized what he did he was upset. But we figured out how to get him back on the air, or so we thought. We built him a shed to store his bicycle and lawnmower in, and we put an underground conduit from the trailer to the shed to run the coax through, and placed a small simple groundplane in his shed. it wasn't outside OR visible. His neghbor decided to file a complaint with the owner, and they tried to force him to remove it. He called me, I got a friend of mine who is a lawyer and we contacted his trailer park owner and told them they would be in violation of their own rules, as the antenna in question was inside and not visible, and that we would be happy to bring equipment to assure he was not causing interferrence. At the same time I contacted his neighbor, and told them that if they complained anymore, that he would in turn file a formal complaint about them parking their cars in his parking spaces for days at a time.
Thus the problem ended.

If you do not like what I do with my property,don't look. As long as I am not doing anything illegal (drugs, prostitution,ect.) it is none of your business.

Been there done that won the fight, one fool came onto my property to see if my car I was rebuilding had valid tags, he was trying to get me into trouble, it had legal tags and he went to jail for trespassing.

>Conrail, NJDOT).

One of my favorite photos is the one that I took of the power
swap at Harrisburg (PA) in 1974 where the diesels were cut off
the Broadway and the black-painted G (Amtrak 910, ex-PRR 4910)
was backed on for its run to NY.

It wasn't the first time I rode behind a G (I "commuted"
between NY and Washington several times in the mid-1950s and in
the late 1970s) but it was the most memorable.

The slight-of-hand trick that they do in Philly today with the
train running backwards from NY pulled by an AEM-7 comes nowheres
near that.

>"And now, after much hard work and dedication, we have one GG-1 locomotive
>restored to its proper condition, as God and the Pennsylvania Railroad
>intended".

Amen, brother. I grew up near the Long Island RR yards in East New
York (Brooklyn) and saw LOTS of electric power bustling around. The
G is a holy object.

The joys of a pluralistic society. The "contract" does not bind the
civil authorities' actions.

I could not get a religious divorce until the civil divorce was
final.

OTOH, my brother in Tel Aviv, where there is no civil marriage or
divorce, went through innumerable hoops to get a religious divorce
to which he was clearly entitled, and a year and a half later when
he wanted to remarry he could not get a civil marriage license in
the US because the religious divorce court in Israel was still
dragging its feet (not enough "grease" on the wheels, it seems).

>CC&R's are not put in place by government.

But they are enforced by state courts. In _Hotz v Rich_, an amateur
antenna case in California during the early 90s, we argued that such
entanglement invoked the provisions of PRB-1 as "state action". The
trial court bought that, but the California Court of Appeal for
District One (San Francisco) did not although another (non-antenna)
case in the Fourth District (Los Angeles) had accepted that argument.

Nah, I'm not talking "lucky" apartment owners. And, I actually stated a mistruth. I don't *know* the hams of which I speak, I have heard people talking to them on the air. Many are also QRP operators!

I honestly don't recall if they held on to the exam papers at that time or what (they probably did, but that was in 1993 and I don't recall). I did not take 1a or 1b - I simply took 1c. I do recall taking both the amateur extra and the commercial telegraph on the same day in 1966 at the FCC in Buffalo. Frankly, although I had to drive 60 miles to the FCC office, I preferred it. There were no questions then as to whether someone had passed the test, failed the test, or simply cheated.

ANYONE thinking the FCC IS, or is LIKELY to do anything with any serious degree of dedication and
aggressiveness to "control" or in ANY way address the issue of CB lawlessness is living in a

DREAM WORLD!

The likes of Riley Hollingsworth are doing precious LITTLE in the direction of "CB crackdown" - and
about all you see at best, is perhaps one such FCC case per month - and THAT only occurs if the FCC
is taken by the hand and forcibly LED to the offender by a Ham or government/commercial interest who
has already done all the footwork FOR the FCC...

I know of at least two hams who lived in an area that had antenna
restrictions. A dipole in the attic is all one used to get his WAS. It took
a couple of years, but he did it.

from studying for my license I understand that an unlicensed person can talk on the air with the licensed person being at the control point of the radio. Just how does that work? the licensed person does the calling then turns it over to the unlicensed person?
The reason I am asking, I have a friend who has invited me over to hang with him in his shack, and said that I could talk on his rig.

Absolutely legal. As long as the control operator is present, someone else can have at it. I believe you could do the calling - just as long as the control operator (licensed) is present. Interestingly enough, a codeless tech can apparently use a 10 meter port on linked repeaters. We have such a system here in Rochester, NY, and I've yakked with Australia with it. A lot of DX comes in at times. The codeless tech is responsible for his signal (say at 2 meters - I use one of the 440 ports myself, but there are ports on 6 meters, 2 meters, 220, and 440 as well as the 10 meter port). The control operator of the repeater system (including the 10 meter port) is responsible for the signal at 10 meters (where the codeless tech can't operate directly).

I am dead serious about this, I want to know too. The ham in the CB
newsgroup are always telling us not to try power on FRS. I think they
are jealous of what we have achieved on CB! Clipped limiters! Echo
mikes! VFOs to slide onto ham freqs! 60 KW mobiles! I bet we can do
the same or better with FRS given a bit of time.

>houses are often made of unobtanium.

Actually, I did. It's like owning an old car; you don't just change
out the part that happens to be broken at the moment, you go over it
with a fine-tooth comb and find all the problems. If you replace all
the wiring in one shot, it's a hell of a lot cheaper than doing one
outlet at a time. Same goes for plumbing, floor joists, roofing, and
doors. You don't just sit around waiting for something to break, you
overhaul the whole system as soon as you find a problem.

When I bought my second house in California in 1977 (a private sale that did not involve real-estate agents on either side) I spent several hours at the County Recorder's office to verify that no CC&Rs attached to the property, a tract home built in 1960.

As a further note, a title search, required to obtain title insurance, will turn up easements and CC&Rs and they will be listed in the property description.

The home we were selling was built for us in 1968 in the same general neighborhood and had CC&Rs. The one relative to antennas stated: "No radio or TV aerials of an unsightly nature shall be erected". I asked my mentor in radio tower litigation, the late Ed Peck, K6AN, what that meant and he said: "It means that you can put up a triband beam if you so desire".

That's been my attitude ever since.

>No, but I imagine the county will be able to tell me.

The county planning and code enforcement folks can tell you "over
the counter" what the property is zoned for or if there are any
ordinances regulating the activity but they cannot - and should not
- tell you if there are any CC&Rs or easements attached.

That info is usually found at the County Recorder's office (which is
in essence a nig library) but you have to do the reaearch yourself or
hire someone to do it for you.

Even after you find the information "the county" won't interpret it
for you nor enforce it for you. You would have to institute a suit
in court to force compilance with a deed easement or CC&R limitation.

IF you have standing to do so. If not - you're out of luck.

We went through this before.....

If they have a real hardcore and deep pocket to get you, they can
hire a radio engineering srrvice with df capability to prove that
the radio signals were coming from that antenna. The FCC will not
go to bat for you in that case.

You're home free as long as the HOA By-Laws gave the officers the
power to grant such a waiver.

If not, and (in California) if it wasn't done as a result of a
resolution adopted at an open meeting, the officers are open to a
lawsuit brought by any other member of the Association voiding the
waiver.

If they are incorporated by reference they are legally part of the
deed. Same thing with contracts and wills that incorporate "external"
documents by reference.

Fixing it right also means looking around for other possible problems
that the current issue might indicate.

There are five basic systems in most houses; electrical, phone,
water/sewage, foundation and structure. (Structure and foundation
being somewhat linked, of course. Depending on the house, there may
be other systems as well.) If you find a problem somewhere in a
system, you should look at the entire system, and repair or replace as
needed to prevent further problems. If an outlet catches fire, you
should start at the service entrance, and check all the wiring, not
just replace the old worn out wiring to that outlet. If your doors
don't close right, you should look at the entire structure to
determine if you need to replace a joist or two, or if the foundation
is settling and should be shored up.

Restore a house the way you would restore a 1965 Stingray, and you'll
save yourself a lot of effort in the long run.

Depends on the situation, and having a cousin trying to make a name
for herself in civil law can cut the costs a *lot*.

Make it even a little easier by keeping an extra gun in the car, so
you can tell the cops that he had access to a gun after he broke into
the car.

All that is required is that he be in a position to turn you off if you violate the rules and therefore in a position to monitor you. You can masquerade as long as his bladder holds out.

You will encounter in Element 3 rules on 'third party' - and you is one - communication under the international agreements. In general, these boil down to observing the rules of the most restrictive country -- a British ham could not participate in the QSO with you on the rig because they do not allow third party communication, and never run a phone patch in pigeon Swahili unless you speak it and it has to be with a country we have an agreement with. Within the US we don't sweat third party a whole lot; protecting Ma Bell never ranked really high on the FCCs priority list.

True today when international calls are cheap. When I was in the Navy stationed on Guam Island, things were different. It was $4.00 per minute with a 3 minute minimum. This was in 1968 dollars on a sailor's pay (entry level as a recruit was something like $93.00 per month in 1967 as I recall). Those phone patches were a LOT more important back then. Reversing the charges from California or Arizona to New York was substantially cheaper than four bucks a minute! Barry Goldwater handled a bunch of patches back then.

at all.

I was referring to your proposal to give them CW privs ...
IN THE LOWER PARTS OF THE HF BANDS ... I asked
"Why not allow them modern digital modes as well (in those
sub-bands)?" THEN I observed that there also isn't a logical,
valid reason (other than S25.5, which will go away in 2003)
to not give them voice privs as well ...)
of the entry class license would be much wider.

> Your statements about "modern digital modes" seems aimed at
"encouraging" (or,
> more accurately, arm-twisting) people to use those modes by limiting
the
> majority of their HF frequency privileges to those modes.

I didn't suggest "limiting the majority of their HF frequency
privileges
to those (digital) modes" ... I merely observed that ALL you had
proposed to give them were expanded CW sub-bands when the
majority don't WANT to use CW.

Good show, the winds are beneath your wings.
>
>
If you have or have access to a half-decent HF reciever you might
consider copying "real cw" code practice off the airwaves. The ARRL
station w1aw broadcasts code practice sessions nightly and it's a
helluva lot of fun. Plus it would give you experience with real radio
operations. The Internet is fine but it ain't the real thing, if you
can copy 7.5wpm solid off the air you'll kick the crap outta the VE
code test grinning from ear-to-ear.

I did that for Novice in the 50's but only had
receiev in the 90s. Times change and no one
has ever shown that if you can receive at X you couldn't
send at X also.
<SNIP>

That will always be the case when additional privileges
are associated with "higher" license grades.

> >> >> Carl describes incentive licensing as "a dismal failure" and says

I agree. Where we differ is when the reward is
inconsistent with the requirements.

> >> Why is Element 4 "necessary"? Because the FCC says so?
> >
> >See my comment above...the test is the means to ascertain

test.

Not sure I agree, but I see where you are going with this (I think).

The questions, within subject areas, ARE at random. The anaolgy

>
> 1) Tech today is a big step for newcomers who do not have technical
> backgrounds. They get way too much VHF/UHF, and if they pass 5 wpm
> code get way too little HF/MF

But the number of hams that have been starting out via the Tech
has been significant since the majority of new hams since the

intro of the "nocode" tech have, in fact, taken the tech route.

> 2) General today is "about right" except the written test is mostly regs
and
> not technical enough

So you'd leave it alone or change it?

> 3) The privileges earned do not match the knowledge tested closely enough

I actually agree with that statement.

> 4) There is no experience requirement

Nor has there been for about 50 years...at least to the extent
additional privileges were involved with the higher
license being saught after.

> 5) VE qualification should be a separate issue

I totally agree on that.

> 6) Current system is a patchwork quilt of a system dating back
> more than 50 years.

Agree also as you have laid out. I think, however,
the "problem" becomes one of WHAT privileges
should be coupled to what requirements. I have
always felt that 1500 watts power was uncalled for
for just a tech license once the written test was no
longer the equal to the General.

> >> The big problem lots of ham have with the current system is that the

>
> Right now:

> 1) Give all Novices and Tech Pluses 200 W CW only on all nonphone General
> HF/MF bands, 160-10. (They haven't been tested on other modes for HF)

No objection on that.

> 2) Allow all "old" Tech Pluses to get Generals by a simple mail or online
> procedure, instead of forcing them to attend VE sessions.

I have no objection to that...BUT I wonder how many
haven't already done so. I'd bet almost everyone that
has even a passing continued interest in ham radio and
was still a pre-87 tech has already "upgraded" at a VE
session. I know everyone that participated on the local
Morris County RACES repeater has done so. The word
went out very quickly.

> 3) Resolve the 40 meter mess at WRC 2003 to get a worldwide exclusive
amateur
> allocation, even if it gives away spectrum. 7000-7200 worldwide
exclusive
> amateur is better for everyone than 7000-7300 in Region 2 and 7000-7100
> everywhere else. 7000-7300 worldwide exclusive amateur would be
wonderful.

That's a goal of WRC 2003 already.

> 4) Develop bandplans for all HF/MF that separate CW, digital and analog
> voice/image modes.

I see no reason to segregate digital from CW. How much of a "slice" would
each get in your solution?

> After S25.5 is gone:
> 1) Three classes of license: Basic, Intermediate, Full (change the names
if you
> don't like them)

I'd like Basic/General/Extra... But it isn't anything I'd loose
sleep over.

> 2) HF/MF bands split into subbands by mode and split again by license
class.
> (Some bands, like 10 and the WARC bands, may be split by mode only).

How would that differ from item 4 above.

> 3) "Basic" license test is simple 20-25 question exam on regs, procedures,
and
> safety. Very little technical and RF exposure stuff, main purpose is
to
> keep Basics out of trouble. Basics get 100-150 watts on HF/MF
> and 25 watts or so
> on VHF/UHF (determined by RF exposure limits). Modes are CW, analog
> voice, PSK31 and many of the other common data modes like packet.

Basics
> cannot be VEs, control ops for repeaters, or be club trustees.
> Basics get all
> VHF/UHF and about half of HF/MF spectrum. Basic is meant as the
entry
> level. Test content matches privileges granted.
>
> 4) "Intermediate" license test is more complex 50-60 question exam on
regs,
> procedures, safety and technical stuff. Mostly technical and RF
exposure
> stuff with some regs to cover expanded privs. Intermediates get
300-400 watts
> watts on all bands, all modes. Intermediates can be VEs after
qualification (see
> below), control ops for repeaters, and club trustees. Intermediates
get all
> VHF/UHF and about three quarters (or more) of HF/MF spectrum.
> Intermediate requires at least one year experience as a Basic.

I see no reason for the one year requirement at this point.

> 5) Full license test is quite complex 100-120 question exam on regs,
> procedures, safety and technical stuff. Mostly technical, with some
regs to cover
> expanded privs. Fulls get all privileges, modes, bands, etc. except
that
> Fulls can be VEs only after qualification (see below). Full license
requires
> at least one year (preferably two years) as an Intermediate.

I see NO difference between Intermediate and Full. Did you leave out a
higher
power allowance (e.g. 1500 watts)?

> 6) All licenses are 10 year and fully renewable/modifiable.

Agree.

> 7) Basics have six-character calls, Intermediates have five- or
six-character
> calls,
> and Fulls have four-, five-, or six-character calls.

I have no care at all about that. My K2UNK will
be my call until my key goes silent.

> 8) There is a separate 30-35 question test for VE qualification, open to
> Intermediates and Fulls, which allows them to be VEs.

Good, I fully agree.

> 9) Existing Novices become Basics, existing Techs, Tech Pluses, Generals
and
> Advanceds become Intermediates, and existing Extras become Fulls.

I'd have no problem...BUT I can hear the complaints
already from the "high power" operators of Tech,
general and Advanced suddenly loosing their power punch.

> 10) Experience requirement is not waived for existing hams to upgrade,
> but their time in existing classes counts.

OK (except I don't see a need for any delay between basic
and Intermediate.

> End result is a system that is easy to get into (Basic is envisioned as a
21st
> century version of the Novice) and has reasonable but meaningful steps to
reach
> full privileges. And the testing matches the priviliges granted.

Not a bad approach.

> The power levels are set about one S-unit apart. Perhaps current hams
would be
> allowed to use the existing power levels so nobody loses privileges.

If the "current" hams get "grandfathered" into the high
power allowed aspect, then they have no incentive
(especially the Generals and Advanced)

Cheers,

OK, now you're really tugging on my nostalgia cord.
My first car was a 50 Ford conv which had glaspaks. I
added a set of dual 97s on the engine, added a contenental
kit on the rear, dropped a 51 hood on it, 49 ford grill trim
and a aftermarket grill trim filler piece. Tubular grill......

>could not use a radio??

The issue was that the CC&Rs attaching to the house restricted amateur antennas to "below the eave line" which we were claiming was unreasonable, Jimmy being one of the more prominent amateurs who handled H&W traffic in and out of the area during the 1989 Loma Prieta earthquake.

In spite of a good case put on by a trial team consisting of two litigation lawyers, two commmunications lawyers, a full professor of radio engineering at Stanford University, the head of communications for the Western Region of the American Red Cross, and the Assistant County Assessor, all active hams and all working pro bono, Da Judge just didn't like the concept of a 75 foot tower, which the "CC&R Sheriff" lead complainant couldn't even see from her house.

He didn't order Jimmy to use 2-meters or forbid him from working HF. He just stated his uninformed and off-base opinion on one way for Jimmy to do his thing while still being hobbled by the restriction.

Jimmy got sick of the whole thing, sold the tower, and had another heart attack shortly after.

Sorry to say Brian,
You got hooked by our resident forging troll.
The real Scott Unit 69 goes by Upplus@Hotmail.com
Not this one with the extra "S".
Please note that you can complain about this
to hotmail, here is an e-mail I received yesterday
concerning these posts:

Hello S3Buell,

Thank you for writing to MSN Hotmail.

I have checked the account that you have reported and found out that it has
been forged. The individual is forging a Hotmail address suggesting that
the message is associated with Hotmail.

We have actively pursued legal action against many of these spammers who
are forging addresses using the Hotmail domain and would like to thank you
for taking the time to forward the message you received to our Abuse Team.
Should you receive any other unsolicited e-mail with the Hotmail domain name
in either the header information or the body of the message, please forward
it to abuse@hotmail.com so that we can investigate each instance.

We encourage you to visit the following links to learn more about spam,
forged message headers, and how to complain about e-mail abuse.

The Anti-Spam HOWTO:
http://www.cauce.org
http://www.bluemarble.net/~scotty/forgery.html

So if this does bother you, you can do what is
described above, if not , life goes on.

plugs!!!)

Odds are by time anyone complained, the "tail light bulb"
or windscreen wiper would be changed...BUT, there are
indeed, condo/homeowner CC&Rs that prohibit such
things as changing the oil and/or doing anything
that resembles auto repair (changing brake shoes, spark
plugs, etc.) in your driveway. NOTE-I mean YOUR driveway,
not one that is shared.

> >- Should CC&Rs that prohibit the color, type and design
> >of the homes exterior be premted on first amendment basis?

to
> choose from is reasonable.

You are correct as to what I intende to mean...BUT that choice
may also be limited to avoid having two homes with the same
color immediately next to each other.

> >- Should CC&Rs that prohibit pets be preempted?
>
> Depends on the pets and other regulations concerning pets, like noise
> ordinances governing barking. No pets means no goldfish or hamsters, btw.

True, the point is that there are many different aspects to CC&Rs.

> My township has a serious leash law - a dog found loose can cost its owner
a

at-home
> activities are not reasonable. Same with restrictions that make such
activities

> impractical or extremely limited.

But they do exist and are enforced. Many "senior" communities prohibit children living with grandparents...and the owners can not sell except to a person or couple over 55.

> One of the real problems I have with CC&Rs is their stealthy nature. In many
> localities it requires serious research to discover if they even exist. While
> some states have disclosure laws, such disclosure is not universal.

IF you write the contract demanding FULL disclosure then your attorney had better look for them AND the attorney for the selling party had better make sure there aren't any being hidden. Such CC&Rs MUST be on record either with the deed and/or via some form of association rules/regs.

What can happen, is over time, the original "association" simply ceases to function if there are no common grounds that need to be cared for by the collective responsibility of the homeowners in the subdivision. That could even happen where common grounds are voluntarily turned over to the municipal (i.e. city) for ownership and care. If there is no association, the ability to enforce CC&Rs becomes difficult and must be taken on as a neighbor against neighbor effort.

Cheers,
Bill K2UNK

The Amish as I understand it generally are allowed to raise hell in their late teens and the parentage hope to hell they come to their senses and return in one piece to carry on.

A '50 Lincoln was the height of coolth in my early teens followed by a 49 Mercury. One of the latter got into a bumper clanger which did not do any body damage but about 412 pounds of lead fell into the street from the nose-and-deck job. Looked like it been attacked by metal moths and the owner did not look real happy.

A flathead as I recall was about 3.8 liters, the size of my Mopar screaming banshee. Wasn't all that big.

I learned hi-speed driving in an Austin-Healy 100-4 based on a tractor engine as were the 240Z and TRseries. There was an exhaust note that might as well have been wired directly to the old gonads. Understeer right up there with a garbage truck but golly that was fun. One of the oddities of driving in Nebraska is that the section roads often have a jog in them to get lined up with the survey on the next range. I happened to go into a 35 mph corner at something well in excess of that, went into a farm lot with its entry right where an escape route should have been, thru a shed fortunately with both doors open, turned around in his yard, went back thru the shed and on my way and didn't do more than scare a few chickens; almost got me going to church again.

Yet many properties with CC&Rs have exactly that type of
prohibition. One fairly well publicized case a few years back
involved a subdivision with CC&Rs that prohibited parking trucks
in the driveway overnight (cars were OK). When one neighbor
bought a new pick-up truck, the legal conflict that followed
eventually got national media attention.

I have done just about everything you can to a vehicle
in my driveway (including removing and rebilding the
engine) because there are no CC&Rs on my home.

contact
> my county authorities about it.

If he is ONLY breaking CC&R rules, the county won't
care. If he is violating county zoning, land use and/or property
maintenance laws, then the county could step in. there
is a difference. CC&Rs are a strictly CIVIL matter between
two private entities (i.e. a homeowner and a homeowner association,
or between two homeowneres) whereas the other is a government
action (i.e. the county) against the individual property
owner.

<SNIP>

> blood to boiling.

CC&Rs are the rules that HOAs enforce. The two generally coexist.
An HOA is created by the developer when the subdivision is built.
In rare cases, a group of existing homeowners could form their
own HOA, but they could NOT force those that didn't want to
join to do so, nor could they impose their rules on homes that
they don't have participation from the homeowner.

True...AND, the real estate agent should also be well aware
of such things. If I were looking for a new home today, I'd
be sure the contract with the real estate agent stated clearly
I MUST be informed of ANY/ALL such CC&Rs or the
deal is off.

Cheers,

1. - One person's mess is anothers beauty..
2. - Noise at night can probably be a noise or nuisance violation (city
or county law)
3. - Runoff, if any, could be environmental...BUT you need
to prove it.

> > How do you know he's in violation of anything? Have you researched th
> > deed to his land? If yours is unrestricted except for pigs living there,
> > his may be just as unrestricted.
>
> No, but I imagine the county will be able to tell me.

You'll probably need to file a complaint. As to CC&Rs, the
county doesn't care, they (the county) don't enforce CC&Rs.
the county enforces laws (land use, ordinances, etc.)

<SNIP>
> Well, that's a good point. To everything there are probably exceptions.
> Actually, Jim, I am not telling him how to live. I am requesting from the

The ONLY reason you or anyone else didn't see it (CC&Rs)
before you signed is because you didn't look for it. They are
NOT hidden from anyone that knows enough to (1) ask for
them and (2) demand them of their real estate agent as
well as their title search company.

If you live in a home that has no CC&Rs today and their is no
HOA, you can NOT be forced to become a part of an HOA just
because some other residents want to start one. I don't know what
you've heard on the radio, but un;ess your deed expressly allows
for creation of an HOA, then you have nothing to worry about...as
Phil Kane has aptly stated in another post.

That law gets you off the hook for criminal charges but does
not protect you from a civil lawsuit where you have the burden
of proving your innocence.

> protected or recovered by any other means."

Here's a quote from "The Texas Gun Owner's Guide" by Korwin & Lockwood.

"Some experts feel that use of deadly force in a property crime, which doesn't involve a threat to life or limb, would be difficult or even impossible to defend in court. Shooting an escaping thief in the back creates a risky legal defense. Many of the precedent-setting cases are old and may not reflect the current state of jurisprudence. Some Supreme Court decisions suggest that the use of deadly force in property-only crimes, or to stop a criminal who is fleeing once the crime has ended, may not be justifiable. Civil liability is not necessarily removed by being cleared of criminal charges."

"These and other factors make reliance on this law quite risky and not recommended."

Nope, I made money but being glued to the terminal for six
hours a day is not my cup of tea. Also it is very frustrating
when the DATEK server goes down while I'm trying to sell
and the stock price is tumbling.

I enjoy teaching in the GED program better than day trading.
During slow times, I can access my news server from work.

I see--and he used the field for planting trees, then cut up the trees
for logs. Now go back to sleep.

I don't recall you writing "(in those subbands)", just the part about "modern
digital modes". With no specification as to what those modes are.

> THEN I observed that there also isn't a logical,
>valid reason (other than S25.5, which will go away in 2003)
>to not give them voice privs as well ...)

Only AFTER I specifically asked about such voice modes.

>of the entry class license would be much wider.

Have you seen the ideas for "Basic/Intermediate/Full" licenses, posted in this
thread at least twice?

It is interesting to note that your signature line about NCI talks about the
future and survival of amateur radio in the 21st century, yet I see no
comprehensive plan for what US ham radio licensing should be like in a
post-S25.5 era. I've seen a few general comments with a heavy bias against what
hams actually do today ("No setasides for legacy modes!" "50 year old SSB
technology") but a detailed plan? Nope. Zip. Nada.

If S25.5 is gonna disappear in less than 2 years, the time to think about what
will happen afterwards is now. What's needed is a detailed plan that will get
widespread support from hams and which doesn't cost the FCC too much work, yet
sets the stage for the growth and future of the ARS. The UK is doing it - but I
don't agree with some of their ideas. Without a plan, folks like N0MHS and W5YI

may get their way and we'll have a US version of the "Foundation" license.
>

Yes, you did. That would be the effect if you don't include voice modes. You only talked about analog voice modes after I asked about them.

>I merely observed that ALL you had
>proposed to give them were expanded CW sub-bands

Not me. Mr. Plourde, Mr. Speroni and some others. I expanded on the idea.

>when the
>majority don't WANT to use CW.

How do you know that? Have you interviewed them in an unbiased way?

If one looks at actual mode usage by amateurs, the majority don't want to use "modern digital modes", either. They want analog voice (FM, SSB). In a "free market of modes", FM dominates VHF/UHF and SSB dominates HF/MF.

I don't see a single violation in my neighborhood. I looked closely, too,
because if they existed they'd be a big help if I ever wanted out of a
restriction.

>I bet there
>is more than one home in your neighborhood with a garden
>shed on a poured foundation.
>
Nope. Not one. Zip. Zero.

People put pressure-treated timbers on the ground, then put the garden shed on
that. It's not "permanent" and therefore not a "foundation" and the shed is
therefore not a "structure". Radio and TV antennas attached to the house and
trees are OK if they can be removed, the house restored to its previous
condition, and if they do not have their own "foundations". Thus no
freestanding towers but the house can look like a porcupine.

In some states, yes. The same is true of CC&Rs - if all parties involved agree
on how to change them, it's often no big deal. How often do ya think THAT
happens?

But if one party doesn't agree, it can turn into a long and costly legal
battle. There may not be much joint property left to distribute.

Point is, most Christians get married "til death us do part", so for them
getting a divorce involves getting the state to preempt provisions of a private
contract. Getting out of an anti-antenna CC&R restriction is asking the FCC
(the feds) to preempt provisions of a private contract. Same thing in different
clothing. And there are precedents for both situations.

Of course. But the buyer may not get a copy of the referenced document unless specifically asked for. Or they may not get a copy until closing. How many people are going to walk away from a closing because of a CC&R discovered at the last minute?

> Same thing with contracts and wills that incorporate "external"

Yup.

Point is ya gotta read everything twice and also retain the services of a competent real estate attorney.

Here in the PA area, local station WWDB used to be all talk. One of the rare high points of that swamp was a show by one Russ Miller, devoted entirely to real-estate subjects from minor repairs and maintenance to legal matters like these. Properly disclaimered, of course. But very useful.

>73 from Rochester, NY

While you are correct in that a Technician operator can legally use
the remote base feature of a VHF repeater to utilize HF operations,
technically, there must be a control operator on duty for the 2 meter
repeater - someone who is responsible for ensuring that the repeater's
remote base operation is done in adherance with the class of the
repeater's licensee - or that of the control operator. It can get
pretty complicated... Suffice it to say that there has to be someone
available who is capable of "pulling the plug" (even if done remotely)
whenever the remote base feature is turned on. Of course, technically
there must be a control operator available on all repeaters at all
times the repeater is available, but we know THAT doesn't always turn
out to be the case...

I remember this incident. It was in the Chicago area, and the guy had
something like 20 citations that he wasn't going to pay. How did things
finally turn out?

That reminds me of a ham who had his shack in his attic. He had a hole in the roof through which a mast went. He had a steering wheel mounted on the bottom of the mast with which he pointed his beam. I don't know how he prevented leaks when it rained.

Maybe he just lived in Phoenix. :-) I once saw a similar installation.
A waterproof external sleeve attached to the mast and fitted over an
internal sleeve that went through the roof and was waterproofed at
the roof interface.

I am, but only since February of... last year, and I don't have any
two-meter equipment. I thought you were referring to other spurs from
channel two. What is the G.R.B.R. rf site?
I've heard that interference again, and I think you must be right about
channel two. It's not real clear, but there's a sort of undercurrent of
buzzing that could be picture modulation. When I throw in 6db of
attenuation, it cuts the spur out completely.

Most houses have HVAC, too.

> If you find a problem somewhere in a
> system, you should look at the entire system, and repair or replace as

Nice idea, particularly if you have an actual fire. But in many cases
that's not what happens - the problems are more on the order of "fuse
blows when you run the coffee perc and the toaster oven at the same
time".

> If your doors
> don't close right, you should look at the entire structure to

Priorities, my friend, priorities.

> Restore a house the way you would restore a 1965 Stingray, and you'll
> save yourself a lot of effort in the long run.

Ah - but would you try to use the '65 'Ray for your ONLY car while
restoring it?Or would you have another car for the practical stuff and
fix up the classic
as a second car?

I agree that the ideal way to deal with an older home is to do the "This Old House/Hometime" treatment, where you simply do what needs to be done all at once. A guy up the street from me is doing just that - he bought the last beat-up house in the neighborhood and is fixing it up. It'll be great when he's done.

Trouble is, the fixer-upper has to have the time and resources in big chunks, AND often has to live somewhere else while the job is going on. That's a LOT of resources all at once.

Add to this two-career families and kids and pretty soon it's a no-go for most folks. The "little boxes made of ticky-tacky" are popular for just this sort of reason.

Even after the work is done, the maintenance issues remain unless you do major upgrades. Older houses tended to have lots of woodwork inside and out, which means lots of painting and repainting. Plaster/lath walls are more of a headache than drywall, etc.

End result is that older homes, if they even exist in the area, are not always a realistic solution. I lived in a 1923 house for 20-1/2 years and grew up in an even older one.

Harry Habig K8ANV (SK) of Cincinnati was the inventor of the delta loop antenna. Harry lived in the same house on Beldare Avenue where he was born early in the century. He cut a hole in the roof and had a three inch mast running through it. On top was a 20m three element delta loop. The attic end was rigged to a geared down washing machine motor. The whole shebang turned about two r.p.m. The entire house seemed to shudder when it stopped. Harry had a built up block on the roof side with a bearing mounted on it. The outdoor side had the rubber end of a common toilet plunger as a rain boot.

Modern ops often use the a CV joint boot from a front wheel drive automobile as a weather boot.

We dedicated almost all of our vacation time over eight years to working on this place. The main part of the house is a log cabin blacksmith shop from the mid-1840s. The big addition wasn't put on until 1976. You should have seen the heating/cooling contractor who was installing the furnace and central air when he found that he'd have to go through a log wall to access the kitchen. He really did not want to fit that piece of ducting. My neighbor came up the hill with some long drill bits, a Sawzall and a small electric chain saw. We had the opening for the ductwork cut in about ten minutes.

I love the place *now*. If I had it all to do again, I'd not have bought a house which I would have to rebuild myself. The antenna farm is, however, worth it.

I can't leave now, Dick. I want to find out how this serial with the
let-them-go-mobile and QRP apartment ops trouncing the big guns turns
out. It is starting to remind me of the guy I met at a local club
meeting who was a self-described DXer. He regaled me with tales of his
Antron antenna at thirty some feet and his Magnum 250 amp--a 250 watter
which *he had modified* to run 1500w output. I'm guessing the
modifications required an outboard chassis bigger than the orginal amp.

Yup! Yup! Yup!!

I think ole KA4MUJ (sk) was right when he said these people had "a disease".
Can't get it out of their system. It's all they LIVE FOR which means we have much
more radio fun to look forward to. I still miss the Mike and Judy show however.
When Raincoat Charlie would get in there and talk about "4x D-Cell vibrators"
and such, it was like live comedy theater you'd pay $35.00 a seat for downtown
right out of your speaker for free. It can only get better in 2002. When NR5T and
EVE get in there it's a 3-ring RF circus. So all you SWL's get tune in to 14.313 USB
for some daytime and weekend radio fun.

The licensed person does NOT "turn it over" to the unlicensed person. The
licensee must remain in control. This is called "third-party traffic."

Not quite: Correct that in addition to the no-code technician licensee coming into the repeater/remote base on VHF that there must be a control operator for the repeater itself, you are incorrect that the reason for the control operator is to ensure operation with the repeater trustee's license class privileges. It's the CONTROL OPERATOR's privileges that are in use, not the trustee's. The no-coder is effectively a "third party" on the control op's license on the HF side of the transmission. The repeater trustee's license class is not relevant here.

A *couple of years* to work WAS??????????

I think that just reinforces how idiotic this FCC ruling is.

On a November Saturday this last fall, I worked WAS and all
Canadian provinces in less than 6 hours. And that would
not be considered a "great feat" among most big station
owners. I'm a "Joe Tribander and wires" on a city lot.
A "big gun" station would likely have done it in half that
time.

A *couple of years*?????? What more evidence do we need that
CC&R-crippled federally licensed Amateur Radio Service stations
need some federal protection -- at least as much as TV-watching-
couch-potatoes already enjoy from the FCC.

With all kind wishes,

de Hans, K0HB

Troll. You suckered me once (as someone pointed out).
At the risk of being suckered again:
Anyway, if you know how to do this stuff, you can
study to pass the ham writtens. Clipped limiters are not
a feature with SSB or AM, but work fine for FM after
filtering. Echo mikes degrades intelligibility of your voice.

Suppose I put a diplexer (that the right term for a passive circuit
that routes different segments of the spectra to different devices)
so a TV set gets fed the VHF spectra, and an HF rig gets
1.8 to 30MHz. Thus the TV antenna *is* a TV antenna, but
also has a secondary use. Of course the diplexer will have to
keep the HF linear out of the TV tuner....

There was a case in San Diego, CA about a half dozen years ago or
so where the CC&Rs prohibited parking "trucks" in the condo garage,
and the court held that the fairly-new pick-up with a good-looking
camper shell, no advertising, and with passenger vehicle license
plates, used as a family vehicle, was not what was intended to be
prohibited by the term "truck".

That might indicate that the spur is happening in the front end
of your radio. A trap at channel 2's video carrier in the antenna feedline
should then help. Doesn't have to be a deep trap, 6dB ought to do it.

Using it for a non-protected purpose will negate the preemption even
if simultaneously used for a protected purpose. That question came
up in connection with an interactive video system where the set-top
box sends signals back to the program source.

Conclusive evidence that the mixing is in your front end, not a
transmitter spur.

Hans, with all due respect, perhaps it would behoove you to find out how
much time was spent on the air. Maybe this person only got on the radio a
few minutes at a time, eh?

The power to regulate commerce would not seem to apply to non-commercial
items. That's probably why a congressional mandate is cited as a
requirement.
```

By the same token, Kim, it might behoove you to get on the air and compare a QRP rig on an attic dipole with Henry 4K Ultra into a 4 element mono-bander at 100+ feet during a DX contest - in order to get a better feel for what these fellas are trying to say to you.

Well Mr., HAMburger, you got suckered by a forging troll again.

Not that this message does NOT say groups.google.com in the
organization, and that my IP address does NOT come back to AOL.

So now that you've seen a real message from me, you can stuff
that echo mike up your ham ticket. I have had enough ham snootiness
to last a lifetime, and at this point will never get a ham ticket
and I will persuade others to stay away. Remember, you are only one
ham, but if you are the first one that a non ham sees, you are what
the non ham expects from all other hams. Thanks for putting the ham
fraternity back into perspective for me.

>time.

On that same November Saturday I worked 48 states and 6 Canadian provinces in a little less than 13 hours of half-trying. The states I missed were Wyoming and Alabama, and I missed them because I never heard them. Hawaii and Alaska are the most difficult states from here in EPA, but they were worked with a little trying. I'm sure if I applied myself a bit more I could have done a WAS.

The setup here consisted of a QRP transceiver adjusted to 5 watts output and a homebrew coax-fed inverted V with the apex at 35 feet or so and the ends at maybe 15 feet. This antenna uses coax-cable traps to permit direct operation on 80 and 40 meters, and a homebrew tuner permitted operation on the other bands.

This was my first serious WAS attempt with this QRP rig, and I'm still learning how to get the most out of it.

>A *couple of years*?????? What more evidence do we need that
>CC&R-crippled federally licensed Amateur Radio Service stations

Dick you are like the boy who cried wolf, every post you claim are forged
some are from the original poster are you drinking again, or did you forget
how to set up Mad Boris Flush.

It's hard to turn in a ticket I never had. No 3 series call for me.
I might be in grid FM29, but no N3xxx or Wx3xxx call for me.

Keith:

This is called Third Party operation. The licensed person is acting
as the control operator for the station, and is responsible for its
proper operation...including what you say. You can actually operate
the transceiver -- push the buttons, turn the dials, and do all the
talking -- including giving your friend's call sign. He just has to be
present and keep you from doing anything wrong -- like operating
in a manner which exceeds his privileges.

Krell:

I didn't say that the only meaning of the FCC's ruling was an imminent
spectrum sell-off. However, the FCC obviously doesn't see any need to
protect a radio amateur's right to establish an effective station on his
own property -- on their own initiative. They'll do it if Congress
forces them to, but somehow, I think that's a bill that would have a very
hard time getting to the floor, much less passing. This whole thing
circles back to the fact that amateur radio doesn't have much of an
economic impact -- at least, not enough to overcome it's nuisance
value to those who don't understand us.

Bob:

So Kim lives in a no-class, redneck neighborhood. There's a lot of that going on here in Delaware, which is one reason why I've been reluctant to buy property. I could end up with a nice house planted next door to somebody who buys a piece of ground, plants a trailer on it, and lets their teen-aged kids run around on 4-wheel ATV's. I have a couple of friends who've had their property rendered virtually unmarketable based on what's going on next door. The only way out of that scenario is to live in a development where the CC&R's tell you not only how many times an hour you can sneeze, but which hand you have to hold the Kleenex in. All I want is a 48-foot tower, a 4-element multi-band Yagi, with a 4-element 6-meter Yagi, and a couple of dipoles. There's nothing "unsightly" about that, compared to what you'll find on virtually every "county" road in this state. Certainly nothing that would reduce the value of adjacent properties. I just hope Kim likes the property she's on now, because if she's living next door to a junkyard, all she'll ever be able to get for her property is a hard time!

Yup, originally came from the Mercury Turnpike Cruiser, hence the name.
That was the one with the rear power window slanting in rather than out.

Don't see too many Insights in the Marvelous Midlands.

Jim: I fully understand the difference between station set-ups. I also fully understand that on a 25W Radio Shack 10M mobile, through a Wilson 1000 magmount antenna, on top of a 1996 Saturn SL1, I spent one Saturday and talked to nearly every state in the United States, including Hawaii. I missed something like North Dakota and one other...maybe Kansas. I haven't done that once with my husband's Yaesu 890FT-AT with 300 watts out and a horizontally polarized beam--and no stupid remarks about having to point the beam in the right direction (not from you, Jim, but from others).

I am a proponent of experimentation, and it is through experimentation that we learn such things as that QRP can get around the world, and can rack up some pretty amazing log files. I understand that a "Henry 4K Ultra into a 4 element mono-bander at 100+ feet during a DX contest" can do better most of the time. I also understand that a QRP rig can do it some of the time. I am also a discerning ham--and appreciate more the patience, hard work, and diligence one must have to do it with QRP. Big watts make the trip easy.

I didn't see, and still don't, any reason not to. Are you insulted, Dave,
by the fact it can be done? Or, you just don't believe it can be done? I
just don't quite understand your refusal to believe that it can be done.

Yes, we do like where we live, Larry. My husband and I did not buy our
first land as an investment. I moved enough with my dad in the military all
my kid life. This will be home until, well, until whenever. There is a
chance I'd leave it if something happens to my husband. I'd be just as
happy then in an apartment watching the maintenance men do the outside work
and having them repair whatever inside that I can't. And I can repair a
lot.

This land will come up for development, as the rich folks who move to the
country and like living on top of each other are just over the hill from us

now. Can't wait 'til they see the junkyard...heh heh

Tuned just right, and echo mic beats the heck out of the power limitations on CB... tuned just right means where there is no echo, just ever so slight reverberation.

Hey man don't be worried. What did we do when chs 1 thru 23 got
crowded? We MOVED ON UP. And what did we do when 23 thru 40 got all
messed up with idiots? We MOVED ON UP AGAIN. So what if the freeband
gets trashed with idiots? We just MOVE ON UP to escape the mess.
Truckers are leading the way....

It would seem that the FCC already has its own perception of what it takes to effectively carry out communications. How are they not protecting the right to establish an effective station? All they've done is define what is necessary to carry out communications. Hams can still put up temporary or hidden/indoor antennas if CC&Rs prohibit permanent structures, and they can still have an effective station. Nothing has changed.

>requirement.

It's long established law that all communiucations are interstate in
nature, and that The Congress has the power to make legislation
affecting any communications and to delegate that power to the FCC
under the commerce clause. What the layman sees as "non-commercial"
use of radio is in fact interstate commerce.

The Congressional mandate on the OTARDs was done to make it crystal
clear that the FCC was to exercise pre-emption over CC&Rs. The FCC
didn't do it on their own - it was in the era of Reed Hundt who
didn't blow his nose without White House or Congressional mandate.

Your original statement: "I know apartment owners whose logs will
rival even the best of antenna farms."

From there we went to: "I don't *know* the hams of which I speak, I have
heard people talking to them on the air. Many are also QRP operators!"

No Kim, I not only don't believe that the logs of apartment owners whose
logs rival even the best of antenna farms, I'm quite sure that your
statement is false.

While I do believe that you have heard them having QSOs of some sort on
the air, I refuse to accept that apartment dwelling QRPers are a match
for the "best of antenna farms"

It is true that those with inadequate antennas and who run low power
made it into my logs from some of my African operations. It is not
nearly so much how well they did as it is that the big dogs had their
time, made their QSOs and went off to find new prey. It also has to do
with my patience in pulling a puny signal out of the noise. Please note
that these apartment dwelling QRPers can get into some fairly rare logs
on the upper bands. When it comes to 160, 80 and 40m, they aren't even
in the game.

Chill out, D. Of course you can 'turn it over' to a third party and let him run the rig while you sit back and watch. And do nothing, so long as he doesn't screw up.

Ah, Really? My daughter and her husband lived in a new subdivision with all wires and cables buried underground where the CCCR said "no additional transmission lines of any type may be installed".

>What are your Amateur Radio goals for 2002?

Great question, Ryan.

Here are some of mine (in no particular order):

- Get workshop and station properly set up and in order.
- Fix up antenna system with better materials, new coax, etc.
- Add some options and mods to K2 #2084
- Build kit or homebrew 100 W amp for same
- Sell off about 50% of ham radio parts/material inventory (that's a BIG job!)
- Set new personal best scores on FD, SS, and other contests.
- Attend a local hamfest or two
- Get BMI (body mass index) under 23 so I'm in better physical shape for all of
the above

Will they all get done by December 31 2002? We'll see!

The rights to regulate interstate commerce. Radio is interstate commerce, and has been recognized as such since the early days of broadcasting. "Commerce" doesn't just mean commercial stations but all radio.

I think you mean you had to send and receive at 5 wpm for the Novice......;-)

>Times change and no one
>has ever shown that if you can receive at X you couldn't
>send at X also.
><SNIP>

It's been shown many times. When you hear a licensed amateur with a terrible
fist, it's clear that the person passed the receiving test but can't send worth
a hoot. FCC just didn;t want to be bothered by sending tests, plus they require
subjective judgement and an examiner who knows da code. End of story.

>inconsistent with the requirements.

The point is that making a person pass additional technical tests to use
subbands is even more of an example of "jumping through hoops" as the code
tests were claimed to be. Yet Grand Poobah Carl supports 'em. In other words,
it's OK to make hams jump through technical test hoops to get more privs.

>has been significant since the majority of new hams since the
>intro of the "nocode" tech have, in fact, taken the tech route.

The Tech took over as the entry level long before 1991. A major reason is 2
meters.

The point is that the number of new hams hasn't grown with the population since
the 1970s.
>
>> 2) General today is "about right" except the written test is mostly regs

>additional privileges were involved with the higher
>license being saught after.

Not true. Until the early 1970s the Extra required 2 years as a General or
higher before they'd lket you near the test. Then it was one year, then zip.
>

No one is guarenteed *any* freedom in the use of an automobile. Well,
maybe one: you're allowed to use your automobile on private land that
you own (subject to CC&Rs, of course :-).

Ownership of an automobile doesn't signify the right to use it. In fact,
the federal government has little or nothing to do with who has the right
to drive automobiles -- that's left up to the states.

The old saying goes that driving is a priviledge, not a right. And it's a
right that is not guarenteed and one that can be taken away at a moment's
notice. Other uses of an automobile are governed in different ways, but
none are, I believe, guarenteed.

Sean.

Interstate, undoubtedly. With regard to 'commerce' and the Amateur Service,
the FCC's opinion would seem to be at odds with yours.

Reed Hundt's departure seems not to have made much difference in this
regard. He who has the gold still makes the rules.

That's the reality Dick but in the minds of us '50s city kids well
east of their neighborhood like myself they were held in awe as
stalwarts of purity and steadfastness to their lofty principles as
scewball as those were by our measures. They were not at all known
then for any loosy-goosey behavior especially by the pubescents
amongst them.
>
>
As we usually did on Friday nites us Aldan Borough Ugly Five
hellraisers piled into Tommy Mau's bleating & popping red '51 Ford
convertible and off we went to The Well, a weekly high-school level
dance held at the Irish-American Club in Terminal Square. Major
big-burg rail & bus transit hub, kids from everywhere lookin' for
action.
>
>
So one nite four broads showed up which we'd never seen before. They
were huddled in a corner looking kinda confused and outta place but
man they had bods to kill for, they were stumbling around on 4" spikes
and they smelled like and were painted like Saturday nite Paris ladies
of the night . . "OK guys, we got fair prey here, it's time to FEED.
Tally-ho . . !"

>
>
I landed on the dark-haired but otherwise Kim Novak lookalike. I quickly noticed a buncha oddities abt her. She talked kinda funny for one, had a bit of an accent and twisted her nouns & verbs here & there. Couldn't quite figger it although I'd heard it before. She didn't know the music or cool dancing and she had a helluva time with the spikes. I finally told her to kick the damned things off, I pitched my penny loafers and we danced all night barefoot. No way anybody could get a 0.005" shim between us toes to noses. For hours. Whew. Talk abt a rigid digit generator.
>
>
I asked her where she wuz from but she pointedly and coyly deflected the question several times, drove me nuts. Eventually I got me a hunch. I'd had a wood shop teacher name of Edgar Strykker from upstate who taught me some bits and pieces of Up County Dutch. I tossed a few of those at her and she didn't even notice I'd shifted languages. That was the end of her game. Holyshit, an Amish girl fer chrissake! Culture shock, could not believe it. Kept it to myself.
>
>
When the lights came up at midnite she looked me in the eye and and purred something like "You know where I'm from and what I am . . " Dumbass Walt Kramer asks if "we" can take them home which was the mandatory maneuver after a dance back then. Visions of getting laid in the back seat, yeah, sure, of course. I'm biting my tongue and giggling to myself, this is gonna be one helluva trip.
>
>
Vince Castle din participate, he wuz hot on a local redhead name of Corrine and they bailed out on a Media trolley and went on to have five kids. So it got down to Tom The Wheel, the other Brian in the group, Kramer and myself and the four Amish broads. 'Cept I was the only one who knew they were Amish.
>
>
"Can you drop us off in Birdsboro?" "WHAT the HELL is a Birdsboro and where izzit?? asketh The Wheelman. "'Bout 50 miles away out the PA turnpike dumbo." sayeth me. I'd been there earlier at the Boy Scout camp outside Birdsboro. Off we went, one of my more memorable drives in the country . . Eight-pack of scrambled hormones in a '51 Ford convert bumping along on it's aft axle for an hour and a half. Nope, she wuz not packing falsies, they wuz real .38s.
>
>
We crested a hill on the far side of Birdsboro 'way out in the middle of nowhere at 2 AM or so. "Let us off here!" Huh? OK . . Poof, they were off down the hill and disappeared into the darkness. Got me another hunch. There was a barn at the bottom of the hill under the only street light within a couple miles. "Hey Mau, shut the frigging

engine off, kill the lights, coast halfway down the hill, park it and
shaddup."
>
>
Maybe twenty minutes later four very proper Amish girls popped outta
the barn complete with their ankle-length gray skirts, starched white
bonnets & aprons and big sewing baskets. They trundled off again,
right outta the tourist guides and never to be seen again. Yeah,
they'd told their parents they'd gotten together for an Amish "sewing
bee" that Friday nite allrighty . . More like a zipper-yanking bee
with some "English" bad boyz from the city.
>
>
Lotta illusions died that nite.
>
>
Roll forward maybe forty years later and I'm in a family restaraunt
sorta joint in Intercourse PA for lunch doing a legenadry Up Country
meatloaf. In those parts an open seat at a table is an invitation to
sit. An elderly Amish farmer did. I related the whole tale and he's
grinning from ear to ear. "You people have always had a hard time
understanding that there is no such thing as a 16 year old Amish
virgin, ain't?"

>.
Don't particularly remember the Lincolns except that those
self-propelled barges needed Coast Guard nummers on their bows,
fuhgeddit. The Zephyrs were kinda cool though. The Mercs were where it
wuz AT in that group.

There were flatheads and there were flatheads. The original was a
135in^3 (2.2 Liter) mill which I think first showed up in the '32
A-Bones, 60Hp or something like that. The '50s versions were 289s (4.7
Liters) which kicked out around 100Hp. Don't skewer me too hard, it's
been a LONG time. My 440 in^3 Mopar beast on the other hand wuz an
ovehead valve 7.2 Liter abomination. They're all now non-discussions,
today it's in the computer chips, revs and o'head cams, no comparison
wrt the lame cubes/Hp ratios of yesteryear.

If it ain't a V-8 noise I doan wanna hear abt it. With a few notable
exceptions. Back in my airborne daze I got close up and friendly with
mills like the 1,500 Hp Allison V-12s in P-51s and the thundering
round-engine Pratts in the assorted Naval birds. Man, when the stick
'n pedal jocks firewall those suckers for takeoff even today ya get
RELIGION, to hell with just the gonads coming to attention.

Jeeesus! Yeah, I think most of us got hardcore reality checks one way
or another. Mine came the midnite I was "doing" a guy and his brand
new 'Vette side by side on West Chester Pike. I wuz a length ahead in
second doing maybe 70 when all of a sudden there was a huge bang and a
shower of fireworks on his part. I got off the pedal and he did
beaucoup 360s past me sparks everywhere. His whole drivetrain was
scattered all over the Pike, I think I ran over his driveshaft. He
finally came to rest INSIDE a freaking Laundromat. Plowed right thru
the front window & the line of washers. He got out and looked OK so I
got the hell outta Broomall real quick like. Went home and diddled the
Vibroplex on 80 and rethought my whole life.

Here are some numbers to think about. These are the number of unexpired
FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of January 1, 2002:

Novice - 40,155 (decrease of 9,174)
Tech - 234,319 (increase of 28,925)
Tech Plus - 85,438 (decrease of 43,422)
General - 138,657 (increase of 25,980)
Advanced - 86,546 (decrease of 13,236)
Extra - 97,995 (increase of 19,245)
Total - 683,110 (increase of 8,318)

Right. Lining-out a restriction is about as effective an exemption as
refusing to sign a citation for a moving violation. Changing home owners
restrictions usually require a 2/3rds vote of the homeowners. And it's
nearly impossible to get that many homeowners to even return a
self-addressed stamped envelope with a check mark on it.

I realize the original post was a troll, but this was a GREAT reply, it was exactly what I was thinking.

By the way, the Ham Bands are "free" too, the FCC doesn't charge me a dime to use them. All I have to do is take a test. And while some places charge to take the tests, our club (BARC, Birmingham Amateur Radio Club, http://www.w4cue.com) underwrites the cost, so you can walk into one of the test sessions and take any test for free.

And I get to operate without worrying about the FCC looking over my shoulder, or worrying I'll get caught! Heh.

Obviously on 10 meters when the band was wide open at the peak of the
sunspot cycle. You got a log of that operation?

> I haven't
> done that once with my husband's Yaesu 890FT-AT with 300 watts out and a

> some pretty amazing log files.

This has been known for a while. Back in the '20s 8GZ/W8GZ, Loren
Windom, worked Australia from Ohio using a fraction of a watt of power
output. Using a one-tube transmitter and a simple receiver.

"Amazing" is in the mind of the beholder.

> I understand that a "Henry 4K Ultra into a 4
> element mono-bander at 100+ feet during a DX contest" can do better most of
> the time.

No, it can do better ALL of the time.

> I also understand that a QRP rig can do it some of the time.

Yup. But 25 watts isn't QRP. It's more than an S-unit above QRP.

> I
> am also a discerning ham--and appreciate more the patience, hard work, and
> diligence one must have to do it with QRP.

Much of which is on the other end of the QSO.

> Big watts make the trip easy.

Only with a decent antenna, which is the whole point. Given a choice between the legal limit into a limited antenna and QRP into a good antenna, I'll take antenna over power any day.

In a few years or less the sunspots will be gone and the bands above 10 MHz will be usable for skywave propagation only during the day - if then. At night there will be times when even 40 meters is almost useless.

That's a common restriction, but it is usually interpreted to refer
to public utilities, of which ham radio is not.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

What a joke! Kevin Mitnick chooses to post this message on his website, http://www.kevinmitnick.com -- even though everybody who talks on the repeater in the Malibu Hills knows that N6NHJ is a known liar and thief. NHJ is a gun toting looney who recently tried to burn his ham radio license at a local Orange County, Calif restaurant. NHJ is the biggest snitch in ham radio history, something Kevin Mitnick use to believe was worst than being a *bin Laden* follower. NHJ snitched out ham Richard Burton. NHJ violates every Part 97 section. NHJ violates every ham radio code of ethics. NHJ has no honor...& cannot be trusted. NJH is backing Kevin Mitnick. What does that say about Mitnick's morals and ethics???

As John Markoff recently said about Mitnick, "The guy doesn't know when to stop. He has used up his 15 minutes of fame and is working on the next 45!" Aren't you all bored with Mitnick's shit. He now has another Mitnick Defense Fund. He plans to *social engineer* money out of the poor amateur radio hams so that he doesn't have to pay a cent of his own money for attorney fees. Mitnick is a cheap little creep who was so bad that he got fired from his radio show and dropped months ago from several writing jobs. Kevin, we all know your ghost writers have covered your ass for years. You can't write worth shit. Why don't we ask Jack Biello how many writing assignments he wrote for you.

The FCC may be taking a hard stand against you, and you may have paid some very heavy dues by serving more prison time than you deserved...but, the world needs to know what a whiney back stabbing bastard you are. You have been back on ham radio begging for remotes, begging for funds for your FCC Mitnick Defense Fund, and begging for attention which you don't deserve.

GET A LIFE, MITNICK! PAY BACK YOUR GRANDMOTHER FOR ALL THOSE THOUSANDS OF DOLLARS SHE GAVE YOU FOR PHONE CALLS WHILE YOU WERE IN PRISON FOR 5 YEARS. You took all her retirement money and squandered it on Prison Phone Time. It's time for you to growup!

All depends whose standards of "huamness" we use, Kim ;-)

> Oh, and I
> happen to know of a gal here who has an ARRL certificate for 45 wpm.

Cool.

> Ever worked KF9AS?

Nope. Not that I know of, anyway.

Speed is but one measure of code skill. I know folks who can zip along
at incredible speed - as long as the signal is in the clear. Others
are not nearly so fast but they can dig a signal out of the mud that
most folks can't even hear. Then there's the ability to put it on
paper, the ability to operate in tough circumstances, the ability to
keep track of what's going on, etc. Contesting and traffic handling
develop those skills. I've got a list around here somewhere....

Coupla FDs ago I had a 13 year old Extra show up in the CW tent. He'd
been an Extra a few years but wasn't a contest op - not that FD is
much of a contest, anyway. He could read 25 per easily but I hadda
coach him on what to send and when, how to keep the log, that sorta
stuff. After a half hour he was getting the idea. Give him a coupla
years and contests and he'll be pretty good. Reminded me of myself
about 30 Field Days ago.

Can you cite an example where conducting amateur communications was
considered a form interstate commerce? If it is considered as such,
then the latest ruling would seem a non-uniform application of the law.

That stinks. They seem to prefer Hondas, my eldest daughter nailed two
of 'em at the same time on the Pike in Edgemont with her Civic. Did
$1,100 worth of damage when the 1500GL was $5k. It gets worse a bit
north, New Hampshire loses an average of five citizens a year in
collisions with their 2,000 moose. Meese?

We're overrun with the damned Whitetails. My solution to the problem
is to start importing pairs of cats from Idaho. BIG cats.

Like no dirty word or business (pecuniary) messages. That
"no business" rule is actually there to protect the ham bands
from being taken over by companies wanting to avoid
phone bills. Also some countries don't like 3rd party
comms. Oddly enough, the bad ol' USSR didn't mind,
but England did.

Being present in a bed sleeping doesn't count. The FCC said as
much when ex KF4FZ(sp) operated 3rd party from another
ham's station.

Back in 1976 I had to send using their straight key at the old FCC office
in NYC. And the examiner was a black woman, not your stereotype
person you would have imagined. She knew the code.

A lot of what privs to allow to what level of license has to
do with what is easily enforceable. What frequency you
are on is easily observed at a remote FCC field site. How
much power is not so easily identifyable. Are you using a
kilowatt into a vertical, or 100W into a beam that happens to
be pointed their way? The FCC guy has to pay you an

inspecting visit. That costs a lot more than just sitting
at a desk playing with a radio dial.

Under certain circumstances QRP can work around the world. QRP doesn't
do very well on 160, 80 or 40m when it comes to working DX. The amazing
logs would come after toiling in the QRP vineyards for a number of years
or after you install the phenomenal antenna farm for use with your QRP
rig. Otherwise, the only time a visiting ham might find your log amazing
is when he remarks, "Amazing--you've been on the air for five years and
you're still on your first log book!".

I understand that a "Henry 4K Ultra into a 4
> element mono-bander at 100+ feet during a DX contest" can do better most of
> the time. I also understand that a QRP rig can do it some of the time.

I just came from an early evening CW pileup on 40m. The DX was
A61AJ and the calling horde must have numbered over a hundred stations
in the U.S. alone. QRP rigs don't break piles like that anytime.
If the propagation gods smile and if you have a decent antenna at decent
height, you'd have A61AJ in your amazing log....but only after the big
cats are finished with their feeding.

> I
> am also a discerning ham--and appreciate more the patience, hard work, and
> diligence one must have to do it with QRP. Big watts make the trip easy.

"Big watts" might make it easy but I'd rather have a hundred watts into
a couple of elements at 75 feet on 40m than have the legal limit going
to a dipole at 30 feet. Some of the guys with "big watts" and big
antennas are also hard working, patient and diligent. Their efforts are
directed toward building and maintaining their stations rather than
sitting in line to work a rare one.

>
>Great question, Ryan.
>
>Here are some of mine (in no particular order):

Ditto! :-)

- Develop a good fist, then...
- Crank up the speed
- Scratch build a 3 el. 10m Yagi
- Scratch build a 4 or 6 el. 2m quad
- Erect a Carolina Windom 80
- Erect a 10 - 80 doublet
- Set-up a nicely "organized" shack
- Get XYL to take Technician exam (Easy, she already wants to.)
- Get XYL to take element 1 (Not-so-easy, "it all sounds the same.")
- Join an ARC.
- Join FISTS
- ARRL 20-wpm Code Proficiency Certificate
- Add radar endorsement to GROL

Phew, I'm "tuckered" already...but I'll get 'em done. ;-)

OK I read more about it at
http://c2.com/~ward/morse/lecture.html

It says there you can make a spark transmitter with a neon sign
transformer. I might try it. The part I don't understand is why it is
illegal. If someone is hearing me on top of their communications isn't
it their fault? They are the ones with the weak radio if they can't
get over me.

>> time.....and may not be his last, either.
>
> Yes, I know about his "jistory". I also know that there has never been
>any allegation of misdeed as far as his Amateur license is concerned.

So where should the line be drawn? If he violates comm law but not Amateur Radio regs, he keeps his license? The law doesn't work like that.

>>>He screwed up, he know's it, he paid the price the courts put on him.

He's on probation. He'll go right back to jail if he violates it. He has NOT paid the price.
>>
>> He is totally unrepentent.
>
> So...Mr FCC Lawyer...Unless they drop to thier knees, wallowing in tears,
>begging you to forgive them and "pretty pretty please don't take my license".
>they are unworthy of submitting to your (or your successors) whims?

> A bit Napoleonic, aren't you?

All it takes is "Gee, I'm sorry, I made a mistake. Learned my lesson. Won't happen again."

Has he done that?

>>The FCC is doing what the law requires to yank this guy's privileges
>> to operate a radio.
>
> Was the FCC REQUESTED to revoke his license? If so, WHY? Has he
>perpetrated a NEW act against the law?

It's their JOB to enforce this stuff.

Seems to me that the real problem is that the FCC has been awful lenient for way too long. Now that Riley & Co. are trying to tighten things up, there are all sorts of complaints.

> was backed on for its run to NY.

Last time I was there they had a brunswick-green GG-1 on display at the station.

The original plan was to extend the wire to Pittsburg and eventually to Chicago - the end of the PRR system. WW2 ended that idea.
>
> It wasn't the first time I rode behind a G (I "commuted"

> near that.

Sadly. Electric loco operation is mostly limited to the Corridor now. Some of the commuter agencies bought AEM-7 types and matching cars because they cost less than an equal number of seats in MUs.
>
>>"And now, after much hard work and dedication, we have one GG-1 locomotive

Yea, verily. I don;t know how many survive. Only one P-5 survives - a boxcab in St. Louis, of all places.

> I grew up near the Long Island RR yards in East New
> York (Brooklyn) and saw LOTS of electric power bustling around. The
> G is a holy object.

The Sunnyside complex is amazing. Much of it has both third rail and overhead catenary.

The real hero of US RR electrification is the old New Haven. They pioneered high voltage AC when everyone else thought low voltage DC. The GG-1 is similar to an earlier NHRR design - EP-3, I think.

Most of the freight lines that were electrified have had the wire taken down. In some cases the cat poles are gone too. Sad.

The real villain in the electrification story is the tax man. Most people don't realize that RRs pay enormous property taxes. And anything they do to improve the property raises the taxes. The cost savings of electrification can be nullified by increased taxes from every burg a line passes through. Add to this the ROI that is expected, and it's a losing game. Oddly enough, nobody expects competing rights-of-way to make an ROI.

That's true. But he DID violate communications law - repeatedly. He has several convictions of comm law violations, not just one.

Although his license ran out in 1999, he is being allowed to operate until a decision is reached. There will be a hearing and other legal proceedings. The FCC did not "yank his license" - they are deciding whether it should be renewed.

The story is on the arrl website. Get the facts - all of them.

The moms who live with the things in Idaho have 30-.06s hung over
their kitchen doors and know how to keep their kids from becoming some
cat's lunch. But here in the I-95 corridor fuhgeddit, the yuppy broads
around here would go apeshit ballistic if a big cat wandered by and
don't even bring up GUNS fer chrissake.
>
>
We have at least one big cat around here which made a helluva media
stir maybe four years ago when the Wilmington Delaware PD made a
complete ass of itself trying to nail the thing. Sent SWAT teams out
with night vision gear, imported a $1,000/day Great White Hunter from
Idaho, whatta bloody hoot. They never even came close and he/she fell
off the media radar screen. The thing is still surfing the Brandywine
River area, once in awhile folk run into the gutted leftovers from one
of it's meals.
>
>
Big cats don't like people. People stand upright which the cats
interpret as being a combat mode. As long as they're not starving they
avoid combat scenes. No healthy big cat around here could possibly be
starving so the likelihood of getting tangled up with one is very
remote. But don't kneel down to tie the laces of yer sneakers when yer
out in the woods along the Brandywine at night . .

Dick:

Wow -- did you ever bring back great memories of my ute -- reading
all the car test articles and editorials by Tom McCahill! I was trying
to remember his name a few weeks ago, but couldn't dredge it up.
What brought it to mind was watching an episode of Motor Trend TV
on TNN, and hearing how Csaba Csere's name is really pronounced
by Jim Scouten! It's something like "Chubba Serie." Tom McCahill
had a writing style that brought a smile to my face with each and
every article, and I purchased at least one car based on his road
test results and personal opinion. I also liked the way he would
toss in comments on everything else from shotguns to shaving
soap. Mechanix Illustrated was a great old mag, and Tom McCahill
was a great writer!

What is the actual ratio of 1970 hams vs 1970 population
compared to today? The population has not been growing
anywhere like it used to (abortions, birth control, etc.)

<SNIP>

zip.

But being an Extra from (about) 1951 to 1967 did NOT garner
any additional privileges...hence no incentive. Given the
intro of incentive licensing (and special privileges for Extra),
what lead to the FCC dropping the 2 yr experience requirement
after continuing it for the 3 yrs between 67-70?

Did the ARRL petition for the change?

FCC unilateral action?

Cheers,
Bill K2UNK

Yet cities, counties and states can and do regulate interstate commerce in
the cases where companies engaged in interstate commerce must
comply with state and local building codes, tax laws, employment
practices, etc.

Just something else to chew on.

A hidden indoor antenna wouldn't constitute a "transmission line."
Indeed, it would seem that the FCC preemption for TV/Satellite
reception would mandate allowing a transmission line from the
TV antenna or SAT dish to the inside of the home.

Cheers,

Carried to that degree, it could also prohibit having additional
electrical wiring done in or about the home. I think, however,
the idea of a transmission line is fairly common to mean external
power lines or cable lines.

I'd go with Phil on that one.

Cheers,
Bill K2UNK

You know? Isn't CW also done in QRP? I'll get ahold of some of the QRPers
down here and see if they can shed some light on this discussion of how much
distance and how often QRP can be of any substance on the bands.

I didn't say I have an amazing log. I don't have a log at all...not into that.

To each his own, Dave. I'll see if I can get ahold of some of the QRPers down here. It's big around this area, I know that. The guys are always talking about the new rigs they are building.

So you really think that the nitpickers so common in HOA's would let you get
away with such a loose interpretation when they find out what *any*
transmission line is? I sure wouldn't buy a house on such shakey a basis.

Just my comments, I wouldn't probably buy one on that basis either.
Odds are the rules barring transmission lines also
probably have another specific section that bar antennas anyway.

Cheers,
Bill K2UNK

Define "installed." I doubt a temporary setup fits the definition.

>Existing cases/case law, etc.

Getting rules changed - none that I know of. Getting exemptions
from the rules - very few.

In California the burden of showing that the restriction or HOA rule
is unreasonable falls on the party wanting such a ruling. Before
1994 the HOA had the burden of showing that the rule was reasonable.

That's why we lost _Hotz v Rich_ on retrial - the standard changed
between the remand by the Court of Appeal and the retrial.

We turned one down just because of that and because it wasn't
as close to public transportation - the other "must have" on
our shopping list - as the one we finally bought.

As you say, Kim, to each his own. There may actually be a few guys
there who are as "into" poor antennas as they are QRP rigs.
One can buy a T-shirt which sums it up pretty well: "Life is too short
for QRP".

The Cornhuskers nee Bugeaters (really) got their plow cleaned by a Miami team no one including the Oregon Ducks was going to come close to. The mass suicide is scheduled for 10 AM to give the Clampetts in Pasadena time to catch the red eye.

Having coached the game, I don't like to see any team beaten like that but maybe now we can get to the reality that we run a classy, first-rate athletic program at a classless 5th rate state university. I know it is the purpose of state universities to ease the pain of living in the state and the function of the athletic program to entertain the taxpayers just as the high-school teams do. But Big Red fever is just plain ridiculous. Much prefer to watch Nebroma play Division 2, and beat the team that won the Div2 playoffs.

If your state hires a good football coach, put a contract out on him asapy for the benefit of your sanity.

Dick N&#65533;BK

You're at fault if your generating strong harmonics on a wide spread. If a person's radio is tuned to say 4Mhz and you build a sparkgap or arc transmitter with an intended frequency of 2Mhz but because your signal is full of strong harmonics then the radio tuined at 4Mhz regardless of filtering and cost, will pick up that harmonic and receive your interference. It's great there are laws and standards that prevent anyone from building a transmitter that transmits anywhere they please. All equipment that emits RF energy must be tested to get approval. The exception is with homebrew amateur radio gear but this gear must be designed so it does not cause any undue interference.
You can read about this on the FCC site or many other sites on the web.

The only time you would not be at fault is if you are tranmitting on your intended frequency (leagally licensed to do so) and the harmonics created a so low as to not cause interference. The if a radio has a poor frontend and they pick up your strong CLEAN signal then it's the fault of the other persons poor receiver or TV or whatever.

Now, Twatty, you'll have to continue to see that big black man, I doubt your parents want anything to do with you now that you've told them you are an AIDS carrier. That IS why you're so angry with your parents, isn't it? Or is it because they shuffled you from foster home to foster home because of all the domestic violence?

Then don't expect folks to accept your claim of a near-WAS under those conditions.

>> > I haven't
>> > done that once with my husband's Yaesu 890FT-AT with 300 watts out and a
>> > horizontally polarized beam
>>
>> How do you get 300 watts out of an FT-890?

>Well, you could with an amp,

Then it's the amplifier that's putting out 300 watts, not the FT-890

> but he's just clarified for me that it does 100 watts, not 300.

See how unreliable one's memory can be? Perhaps you worked 47 states that day in '96 - or maybe it was 37, or 27, or 17. Hard to know for sure without a permanent record.

>> > I understand that a "Henry 4K Ultra into a 4
>> > element mono-bander at 100+ feet during a DX contest" can do better most

>>
>> No, it can do better ALL of the time.

>Really?

Yeah, really. Ask K8MN - he not only works DX, he knows what is to BE DX. Real DX.

>> > I also understand that a QRP rig can do it some of the time.
>>
>> Yup. But 25 watts isn't QRP. It's more than an S-unit above QRP.

>Where'd you get 25 watts from?

You mentioned your results with 25 watts.

> It's my understanding that 5 or less is QRP.

Right. Been there, done that. Since 1967. My first rig was 6V6GT on 80 meters - 5 watts out on a good day. Not on a par with the Novice gallon folks by a long shot.

>> > I
>> > am also a discerning ham--and appreciate more the patience, hard work,

>>
>> Only with a decent antenna, which is the whole point. Given a choice
>> between the legal limit into a limited antenna and QRP into a good
>> antenna, I'll take antenna over power any day.

>Yep.

Which means that having effective antennas is essential to having an effective ham station. That's what Larry and others
are about in this thread.

>Probably why a good QRP station does well.

What constitutes "doing well" depends on experience and accomplishment. On Field Day, using a 100 watt rig and dipole at 50 feet, I can typically average 30 QSOs per hour and peak at 60 QSOs during a really good hour on 80. 40 or 20 CW. To many hams that is simply amazing performance (i.e., "doing well") but to any real contester it's not even in the game. And I don't claim that it is.

Look at the contest-winning and section-winning scores in QST or the ARRL website. That's the standard to use.

All numbers are rounded off - others are invited to post more accurate
figures:

US population:

1970 - 203 million
1980 - 227 million
1990 - 249 million
2000 - 281 million

US hams:

1970 - 270,000 (approximate, interpolated from other data)
1980 - 350,000
1990 -
2000 - 680,000

Couldn't have said it better. Speed doesn't mean squiddly, if you can't put it on paper at the receiving end. What Jim has described above are the qualifications the ARRL is looking for in A-1 Operators. I am proud to be a member of that group. This award transcends CW and is equally relevant to SSB and digital modes. If you are a member of the ARRL A-1 Operator Club, try and nominate at least one new member this year. Here's the link to learn more about the A-1 Operator Club. (note: You don't need to be a member of the ARRL to receive this award)

Ain't that the truf! I don't really have anything against Nebraska,
well maybe a little, but they were NOT the team that should have been
playing Miami. So the BCS treated the nation to a really boring game on
account of their stupid system. I didn't watch much of it, but tuned
back in the forth quarter in time to listen to the announcers pathetic
shilling for the BCS. About all thay could come up with was some
nonsense about being good for different conferences.

The best part of the game was watching the BCS take a nationwide and
well deserved spanking.

My viewpoint is that of a native Nebraskan a bit tired of Go Big Red as the Clampetts drool on their shoes.

It is interesting to note that the Division 2 playoff winner also did not win its conference, North Dakota won the playoffs but was second in the North Central Conference. So plugging that loophole won't help a lot. The problem the BCS had is to find someone to sacrifice to Miami. So when it was all said and done, who you played determined the sacrificial lamb and that is not entirely a bad idea in the long run of things.

Oregon, who the hell knows? Their schedule did them in. Colorado was a classic case of coaching getting you to the playoffs but talent being required to win them. It falls off pretty quickly from there. You do not coach speed and Miami has quick running out its ears.

And a lot depends on when and where. Do you only look at the last part of the season to get the best show in the bowl games? For that matter, do you select teams that bring money? There is no formula that will not produce the occasional stupidity.

Dick NBK

My position on the whole college football/bowl situation is that we return to the so called "bad old days" where you played a good season, and you went to a bowl. The better teams went to the bigger bowls, you know the drill.

The whole issue of playoffs is not a good one, from the fans perspective. Fans that follow the team will probably have to make a choice which playoff game they go to. The first games would probably be lightly attended, but that means that some people who would have gone to a bowl game would now stay home (keeping their money with them) and of course the loser team isn't sending any fans to the next level.

People try to compare it to basketball, where they do have a successful playoff system, but of course, thay have a lot more games, and during the week, not just Saturdays.

I say let the students be students, and not force them to entertain us any more than we already do. After all, thats what it is supposed to be about.

>Mr. M is out on probation. His sentence has NOT been fulfilled.

True. But is he otherwise complying with the terms of his probation? Has he violated ANY law that we know of?

So far, by his handling of the on-going license matter, it would appear as though he's doing things by the book...

>That's true. But he DID violate communications law - repeatedly. He has
>several
>convictions of comm law violations, not just one

Again true. But I reitereate my question about his conduct SINCE his sentencing and incarceration, including his probationary program.

>Although his license ran out in 1999, he is being allowed to operate until a
>decision is reached. There will be a hearing and other legal proceedings. The
>FCC did not "yank his license" - they are deciding whether it should be
>renewed.

And again...how has he conducted himself ON-THE-AIR? Failure to ID? QRM'ing nets? Broadcasting?

So far and since before 1999, it seems he's been doing it lawfully. No one has cited anything otherwise.

If he relapses, sure...Bust him hard! He's had his "rehabilitation" and reasonable second chance, ie: probation.

Otherwise, I thought this was supposed to be how it worked! Someone screws up...We "punish" them via the courts, and then we return them to society to be a "productive member".

But where is the enticement to "go straight" if we keep ON punishing after-the-fact?

>The story is on the arrl website. Get the facts - all of them.

I did...And from other sites too. He was a screw up. But is he today?

>What good would it do to take away his license while he's in the pokey?

What good does it do to take it now? He's been on probation for a while
and doing what he's supposed to do.

>So if they yanked his license then, he'd be off the air now.

Yes. And the action THEN would have been seen as part of the original
snetence and punishment.

To take his license NOW, while he's doing those things to reassimilate
into society, doesn't make sense.

>The issue is renewal of the license.

If not for his conviction, he would have otherwise been renewed. His
conduct under Part 97 has never been at issue. As far as I recall, it never
was before, either.

>Not "morality" but "character".

Point taken, but my question remains the same. Who in the FCC has been
appointed Character Police?

THAT was addressed in his conviction and subsequent "rehabilitation". He
was released on probation because he demonstrated certain conduct while
incarcerated, and has, as far as anyone can see, fulfilled the expectations of
the courts.

>So where should the line be drawn? If he violates comm law but not Amateur
>Radio regs, he keeps his license? The law doesn't work like that.

Why not? No one says the FCC HAS to pull (or refuse to renew) his
license.

I still contend that the FCC would benefit far more by saying "We'll let
him keep his license while he behaves..." rather than slam him for something he
did unrelated to his Amateur license.

That's an awfully big carrot...or at least it would be to ME, if I were in
his shoes.

>He's on probation. He'll go right back to jail if he violates it. He has NOT
>paid the price.

But he's complying with the terms of the sentence and his probation, is he not? His Amatuer Radio license was neer part and parcel of his conviction, was it?

>All it takes is "Gee, I'm sorry, I made a mistake. Learned my lesson. Won't
>happen again."
>
>Has he done that?

Does the law specify where he MUST? Isn't that tantamount to surrendering his Fifth Amendment rights if he did?

>>Was the FCC REQUESTED to revoke his license? If so, WHY? Has he
>>perpetrated a NEW act against the law?
>
>It's their JOB to enforce this stuff.

Still doesn't answer the question, Jim.

>Seems to me that the real problem is that the FCC has been awful lenient for
>way too long. Now that Riley & Co. are trying to tighten things up, there are
>all sorts of complaints.

And American jurisprudence, as I understand it, says you aren't supposed to be able to go back after-the-fact (conviction and sentence) and impose new conditions of that conviction and sentence.

I still say hold out that carrot. If he screws up again, slap him with it.

That looks good. But for a more meaningful comparison
we should strip out of the population numbers the kids
too young to likely get a license. How many 3 year old
extras are there? But ignoring this, a rough approx. would
be that the population increased by 1.38 times, and the
ham population increased 2.51 times. That would be
2.51/1.38=1.825 times faster. It seems that the ARS
is in fairly good shape in terms of growth over the long term.

No we're not and that is why it is so easy to tell the forges from the real me. If you note the headers I have no () around "Unit-69" and the faker does. I sign with "Chesapeake Bay" and the faker doesn't (he doesn't even know where it is). Also another sure way to tell the fake is that he obsesses about IP numbers. All you have to do is look for the TWO "s's in "uppluss" and you know you have tjhe GENUINE Scott.

Scott Unit-69

That was in regard to an ordinance.

The question was in regard to changing a HOA rule. Usually the
courts will find that the rule is unenforceable or unreasonable - as
they did for a requirement to have a Washington Palm Tree on the
front lawn of each home - rather than to order a specific
rewording/change of a rule.

Pack it with the suitcases and it's no problem. Pack it in the carry
on, and be prepared to unpack it and do all that explaining every time
you change flights.

True Jim, but you must remember that
Herbie lives for getting onto ham radio
and generating as much trouble on the
airwaves as possible. His stellar track
record of verbal harassment of the Maritime
Mobile and Intercon Nets for over 15 Years
prove that beyond any doubt whatsoever.

He may have had his wings clipped by
R.H. for now, but he will find a way to
get back on the air if at all possible.
This guy's a ultra right wing pariah
with OCD and up until now, a microphone.
Ham radio is his brand of crack cocaine.

I find that hard to believe. Councilmembers are the recipients of lawsuits
all the time to which a common defense via the township's attorney
is the normal result. It is almost impossible for anyone to sue and win
againt
an elected official on an individual basis. The exception comes in
for gross negligence and or criminal activity.

Cheers,
Bill K2UNK, former councilmember (12 years) Mt Olive Twp, NJ

Looks like the ARS has been growing faster than the
population. Population grew about 40% from 1970-2000
while ARS grew about 250%

Cheers,
Bill K2UNK

They're apparently a very low volume production model. This is a
heavily-populated area and I don't think I've spotted a half-dozen of
'em since they were introduced. I heard they're $20k, that's too much
bread for a commuter scooter for my taste, I'm not enough of a
tree-hugger to consider any such thing. The other scarce wheels is the
snake . . Dodge Viper? Now there's a real serious piece of road
machinery.

I don't think I was making said case, Jim. I said that I know of apartment owners (meaning apartment dwellers when I said it) whose logs would rival that of some antenna farms. Now, if you guys want to get so damned literal, "know of" and "some" are classifiers there.

However, just to make you feel better, I have heard on the air, hams speaking of other hams and to other hams who are apartment dwellers who have mighty impressive logs--by the sounds of it. I have never been a witness to said logs. I also know of hams who say they and other hams like them have worked the world--many times--with QRP. I, again, have not seen the logs of these said QRPers. And, I have heard of DX and Contest stations that have mighty impressive logs. I have not seen any of these said logs.

Shall I get in the habit of being so extremely definitive--or is all the hullabaloo for the sake of argument? Good grief.

Sorry,

In NC, if it is 2 AM and somebody invades your home, he's paid for. Just make sure you tell
the cop you saw something "glint" in the moonlight and you thought he had a gun. Just don't
shoot him in the back. It has happened around here several times, Homeowner went free
every time. Just about everyone of the perps were well known in the justice system, and the
legal boys don't shed a tear over their demise. Just before Christmas, a scumbag walked into
a store uptown for a little easy money. He became a little too fascinated with the sight of money being put in a bag. Storeowner whipped out a pistol and blew his brains out. Short
investigation, perp had a gun, DA ruled self defense, and case closed. Oughtta be MORE of
this.

Jerry

Not sure what case are you trying to make then. That antenna
restrictions really aren't that bad after all? I honestly don't know
what point you are trying to make, Kim.

I don't recall ever seeing such a post from Kim. Are you saying that you
can't make a long distance DX contact running 100 watts into an attic
dipole?

mu own personal experience is that if yo try to be open about
anything electronic, then those nice people at security
will try to be nice back but will then suggest you put it
in your checked-baggage.

then you have the problem of wondering whether you will see it again!

Yes, but it also looks like the big increase in the slope
of amateur growth relative to population came after
the no code tech license provided a more reasonable
entry point ...

Maybe you've forgotten what the misguided Ms. Walker claimed as if it
were gospel--the bit about "knowing" apartment dwellers whose logs rival
those who own the finest antenna farms.

Sure a guy with a 100w and an indoor attic dipole will work *some* DX if
the propagation gods smile and the pileup isn't too big. His logs will
rival those of the big guns only in his mind and perhaps Kim's. Kim's
statements do make it sound as if she lacks understanding of radio.

Naw Kim, that isn't my "snubbiness" (you may have coined a new word). That's just me attempting to clue you in. You don't have to take my word for things. In fact, you can retain your beliefs that apartment dweller's logs can rival those of the fellow with the finest antenna farm. One of the problems with that is that you'll look pretty foolish to anyone who really understands what it takes to get a signal from here to there with any regularity on any number of bands.

It isn't my "snubbiness" at all. You may call it my steadfast belief in what I've explained to you. There isn't any possibility of some people believing one view and some people believing the opposite view. There is only one correct position in this one. It isn't yours.

The idea that an indoor lash up is going to equal a big-league Sterba Curtain would lead to Vatican Radio stringing dipoles in St. Peter's rather than fight with the Italian government's 6V/meter radiation standard (WHO limit is 80) and VOA running out of the Capitol where an eye could be kept on them.

Everyone but Kim has this figured out, and for that matter has Kim figured out. Do us all a favor and do not orbit in ever-tightening circles around her.

I don't mind getting literal, especially when we can cut to the chase.
After all, you seemed quite literal when you said "finest antenna farms"
and not "some antenna farms". It has been pointed out to you by at
least four individuals that your statement doesn't hold water.

> However, just to make you feel better, I have heard on the air, hams

A '73 Vega must seem like a mighty impressive automobile to one who has
never seen another car.

I also know of hams who say they and other hams like them have
> worked the world--many times--with QRP. I, again, have not seen the logs of
> these said QRPers.

There are some QRPers working the world with some really massive piles
of aluminum placed at extreme altitude. The QRPers living in apartments
and using marginal antennas are only working the known world.

And, I have heard of DX and Contest stations that have
> mighty impressive logs. I have not seen any of these said logs.

Them maybe you do need to check out the ARRL DX Contest results or the CQ Worldwide DX Contest results. Both mags break scores down by power level.

> Shall I get in the habit of being so extremely definitive--or is all the
> hullabaloo for the sake of argument? Good grief.

The hullabaloo was caused by your highly inaccurate claim and subsequent attempts at defending it as factual.

Uhhh, Kim -- what's the difference between an echo and an "ever so slight reverberation?" Don't look now -- but an "ever so slight reverberation" is virtually a textbook definition of an echo.

>hidden/indoor antennas if CC&Rs prohibit permanent structures, and they can
>still have an effective station. Nothing has changed.

Yes, Krell, things have changed.

Take a look at my own station as an example. I live in a 3rd floor
apartment in a wood-framed building. The plumbing is all PVC/ABS,
so there isn't even a way to make an effective ground on a cold water
pipe. I use indoor dipoles for 20- and 10-meters, and a piece of wire
tuned with a digital auto-tuner, mainly for 30- and 40-meters, but it's
not very efficient due to a lack of a ground. I consider myself to
have a highly effective station, based on the fact that I can
communicate to most parts of the world on CW and digital modes,
on days with reasonable propagation. However, I am nowhere near
as effective as I could be with a tower of modest height (35-50 feet)
and a 3- or 4-element Yagi and a good all-band dipole. If I lived
in a typical new home in my area, there would be no way I could
have that "marginal" setup, and my "compromise" set up would
end up not being as effective as what I have now, due to the fact
that I'd be living two floors closer to the ground. In fact, about
the best part of my station would be the fact that I could most
likely establish an effective RF-ground -- if not decent antennae.

In my POV, nobody has a right to limit me this severely. I believe
that there is a world of difference in aesthetics between a well-
installed tower/antenna setup and having a 16-foot bass boat
on a trailer permanently parked next door -- or living next door
to a junkyard, as Kim does. Until this latest decision by the FCC,
I always thought ham radio was an activity which could justify
being treated differently, based on the public service capabilities
hams can offer to their communities. However, it now appears that
we're to be relegated to portable/mobile operation unless we can
afford a few acres in the country. This would seem to me to limit
the ability of the ARS to even maintain it's present numbers,
much less grow…and that will ultimately result in huge loss
of spectrum -- which is the FCC's true agenda.

If I have waded thru the bulrushes without losing my way, I think her
point is that a very slight reverb helps communication. Debatable perhaps
but standard broadcast practice for years. Like anything else it can be
overdone and on 27 MHz EVERYTHING is overdone. Unfortunately most of the
people who have it sound like W-I-N-O Wonderful Wino or a bad caricature
of it.

Never thought I would find myself defending Kim. I think I will go get
drunk.

Careful Dave. Carl holds you DXer types as the destroyers of amateur radio, along with contesters, rag chewers and W5TIT types.

He's the self proclaimed savior of amateur radio (according to his web-site)

Looking forward to working your with my 100 watts and my attic dipole (of course, the tower sits on my roof @ 40') and It have 40 and 80 m dipoles attached. And my logs would rival most.

Gotta run, having fresh sliced bacon for a snack. All this W5TIT talk has worked my up a powerful hunger for some ham products. W5TIT, the other OTHER white meat

sorry couldn't resist. Back to 6 meters, already in progress. If only the bans stay like this for the contest in 2 weeks wowie

dit dit

Building codes and other similar regs are safety issues. A ham license doesn't
give one the right to put up an unsafe tower.

Many of the other laws involve commercial operations and do not involve
personal stuff like ham radio.

The important thing is that it's regulation, not prohibition.

>- Erect a 10 - 80 doublet

No need for both. My limited experience with "carolina" Windoms hasn't been
good.

Do the 80-10 doublet, open-wire line, BALANCED tuner, save yourself a lot of
headaches.

Download Reg Edwards DIPOLE1 and DIPOLE2 programs and see what the impedances
look like.

US census data shows that the percentage of the population that are children has been dropping steadily since 1970. End of the baby boom, folks living longer, folks waiting longer to have kids and having fewer or nor nkids, etc., etc.

>But ignoring this, a rough approx. would

>2.51/1.38=1.825 times faster. It seems that the ARS
>is in fairly good shape in terms of growth over the long term.

Think about that the next time somebody says the sky is falling and we gotta make radical changes to license requirements in order to save ham radio.

In article <a15bmrrdq1@slb3.atl.mindspring.net>, "Bill Sohl"
<billsohl@mindspring.com> writes:

>Looks like the ARS has been growing faster than the
>population.

Yup. But while the growth in the population has been steady, ham radio's growth speeds up and slows down.

Here's a list of the US ARS population from the end of WW2 until today. These were obtained from callbooks, published FCC bumbers and other historic data, not interpolated. Numbers are rounded off.

1946 - 60,000
1950 - 90,000
1956 - 140,000
1963 - 250,000
1970 - 270,000
1977 - 327,000
1989 - 500,000
2000 - 680,000

>Population grew about 40% from 1970-2000
>while ARS grew about 250%

Which sez something about the need to make radical changes in order to "assure the survival and prosperity of ham radio" in the 21st century. Or about claims that ham radio is "dying". The 10 year license term thing in 1984 confuses the issue a bit, but those who claim the sky is falling aren't looking at the long-term numbers.

OK, Dave. Let me get the crayons out again. Regularity isn't a
consideration of mine when I say that I have heard hams speak of their logs
from within the confines of apartment and similar conditions. Now, that
their logs can rival that of an antenna farm doesn't surprise me at all. I
didn't mean for you to take it as "gospel" that I mean they will do it with
regularity. Yeah, I can believe it. Maybe you've been a "big *cough* gun"
for too long.

You haven't explained a thing, Dave, other than that you now wait with
baited cyberchips for my next words to be taken as gospel by you.

A log rivaling another log, to me, has nothing to do with how it got that
way, Dick. Indoor, outdoor, big, little, whatever. Unless there are way
more bullshitters on the air than I thought, there sure are a lot of hams
out there who have operated under major constriction and yet report loads of
contacts in far away places. There sure are a lot of hams out there who
chase DX (for whatever reason I'll never understand) and make the contact.
There are, in addition, loads of QRPers who report the same thing.

I've had setups like Larry's and I've worked a fair amount of DX
using SSB and a 100W transceiver. I once did Antarctica. So it
can be done using indoor stealth antennas. Of course having
the beams and towers would help a lot.

Larry, do you have a CATV outlet near the ham setup?
The outer shield of the CATV coax is usually grounded
and you might be able to use it as a ground. Combine that
with the electrical safety ground and that should help get
you a ground.

What would make you write something like that, Kim? Is your estrogen
replacement program now up for discussion? You made some claims which
```

defy the laws of physics. You got called on it. That you don't like it is too bad.

It is okay if you don't understand radio. You aren't that kind of ham.

Well, we wouldn't want to take everything you say as gospel, Kim. After
all, you may have meant that the guy with the fine tower and stacked
monobanders has been dead for a couple of years. That'd certainly help
to boost the score of the apartment dweller, wouldn't it.

> > It isn't my "snubbiness" at all. You may call it my steadfast belief in

Nope. That isn't the claim you made. No one else has stepped up to the
plate to make the claim you made. I won't even call *YOU* a liar. You
simply don't know what you are talking about.

Whatsa matter? No more ROTFLYAO?

Now how do you figure that from the above data, Carl? 'Specially without a
number for 1991? And how do you allow for the fact that the license term
doubled in 1984, which meant thaty from 1989 to 1994 there were NO expirations?

Here's a chart of US hams with annual growth percentages from the end of WW2 to
2000:

1946 - 60,000
1950 - 90,000 - 10.67% annual growth for 4 years
1956 - 140,000 - 7.65% annual growth for 6 years
1963 - 250,000 - 8.64% annual growth for 7 years
1970 - 270,000 - 1.11% annual growth for 7 years

1977 - 327,000 - 2.78% annual growth for 7 years
1989 - 500,000 - 3.61% annual growth for 12 years
2000 - 680,000 - 2.84% annual growth for 11 years

Note that the growth AFTER the dropping of the code test from the Tech is LOWER than before.

How about that.

Sorry, I am full woman here. Now, what claim have I made that defy the laws of physics: that I believe what I've heard when I hear hams talk about their logs--whose operation was out of either an apartment or similar situation? I didn't say a word about station setup, how long it took (I'd have no idea) for their logs to get that way, nothing--nothing--about station. ONLY that I hear of logs that will rival those of people who operate from the finest antenna farms. Now, either I am to believe that they are/were lying; or I am to believe that you just don't believe it. I don't believe they were lying--they may have been. The bottom line of this whole discussion is that the FCC, nor ARRL, need be requesting that--because "we" are ham radio operators--we be given some kind of special consideration for intervention with a CCR. I don't believe "we" as ham radio operators need to break the law by changing the law.

Doesn't say much for your thoughts of how "effective" you think that is. However, your comments are well noted, and I like to believe that we don't need the FCC, or Congress, to "help" ham radio by giving us special consideration on CCRs that we were too stupid to know about, read, and research before we signed with the dotted line.

Whether someone has a fine antenna farm, or comes up with other ways of operating, ham radio provides that those rare contacts can be had. I can't help but think of the analogy of CW vs. NO CW. If no (or little) CW is "dumbing down" the ham bands because it will cause a lack of "work" to get into the hobby; then what's that say for those who take the easy way out :^ and build their huge antenna farms? Be a real ham--do it with QRP, or attic installations, or do some *real* experimentation with rooftop wire configurations...

No? What, too hard?

One of the more hilarious examples of just what Brian is saying occurred when a family of beaver moved into a Milwaukee burb and built their lodge out of the local ornamental and blessed expensive shrubery. Hoo-hah.

On your car insurance, there are two coverages generally that apply to the car: Collision and what might be called Comprehensive or simply Other that is all else. In most of the USA, Collision is far more expensive but not always. Places like El Paso where the car can be beyond hope and reach in a heartbeat are reversed because of theft; in the Great North Woods it is deer and it sounds like you are about to join the frozen northland for Comprensive rates. Oddly, whacking a moose or being whacked by one is not a Collision.

Putting out doe permits is not the total answer unless the local Nimrods get over blasting mommy deer. A lot of states have found that adding two days to the main season, setting a minimum for does, and giving the two days to the blackpowder boys the first year it isn't met is usually effective. Like you I am ready for landmines and hand grenades.

The second ham licensed grew the ARS by 100%. Percent is probably not
the best way to look at things. Absolute number comparisons seem to
me to be more important since our limited resources can become
saturated.

Re the deer whistles, experience in the Northland is mixed to say the least. Had at least one friend swear all they did was cause the deer to look at you before jumping out in front of you.

Sounds like you got one on his way to somewhere else that ignored the road with you in it. Not a lot you are going to do about that.

In days of old, no longer, it made a diff whether you hit the deer or the deer hit you on whether you had a deductible (Comp often did not at the time) or not. Caused a lot of complaints not the least among adjusters who felt it was kind of silly to do a psychoanalysis on a dead deer.

Phew! You really are thick. Your claim was that you know hams living
in apartments whose logs rival those of hams with the finest antenna
farms. There. That was your claim. It cannot be right. It is wrong.
You don't know what you are talking about.

We can't tell if you are simply ignorant or perhaps gullible in
accepting the statements of other hams who are perhaps deluding
themselves because they've never seen the logs of those who have the
"finest antenna farms". For you to persist in the face of strong
evidence to the contrary is simply incredible.

> > It is okay if you don't understand radio. You aren't that kind of ham.

It would take a real air head to climb to the top of the pushup mast
supporting her Antron and bleat, "I'm ignorant and proud of it!"

Simply not true, Kim. You didn't claim that hams who are apartment
dwellers have as much fun as those with the finest antenna farms. Cough
all you like. Your ignorance is showing.

It's also about reading and researching a property
> before one is stupid enough to buy into it and then say, "OH BOOHOO, look,
> here's something I missed and that I just can't live with."

Finding a home without restrictive covenenants is becoming increasingly
difficult for those who live near cities. That is a reality. The
covenants are often arbitrary and prevent the land owner from enjoying
the use of his land. This is a threat to the growth of amateur radio
and to the participation in amateur radio of many of those already
licensed. That you are incapable of seeing that is pathetic.

It's a valid indicator if you are looking for trends.

> Absolute number comparisons seem to
>me to be more important since our limited resources can become
>saturated.

Then lets look at absolute numbers:

1977 to 1989 (all US hams take code tests, no code waivers, 5 year licenses still expiring): Growth of 173,000 in 12 years. Average 14,416 per year

1989 to 2000 (code waivers in 1990, nocodetest license in 1991, no expirations at all from 1989 to 1994): Growth of 180,000 in 11 years. Average 16,363 per year.

If the average dropout rate is 2.5% per year then the switch to 10 year licenses caused a "bubble" of 12,500 licenses per year from 1989 to 1994.

Is there any indication that our resources are saturated?

The plastic plumbing makes for no ground at all, Kim. See any problems
with using CATV shielding as a ground for ham gear?

Oh, that would depend on what you expect out of ham radio and ham radio operators, of whatever number.
If you want ham radio to be overpopulated with W5TIT's the all is more than well.

It Marconi was the first ham, tell us - who was the second? How did he know?

> Percent is probably not
> the best way to look at things.

Especially since it causes discomfiture to your stated position.

> Absolute number comparisons seem to
> me to be more important

Right! Get those numbers up, the heck with any and all actual qualification!

> since our limited resources can become
> saturated.

Well, that tells us you've been somewhere besides on the air lately. Our resources are anything BUT saturated, in fact are at risk of being lost as abandoned for lack of interest - that is from actual on-air use. Entire HF bands are nearly vacant. VHF and UHF are even worse. You can count on the fingers of one hand the total number of contacts being made at times on some of the OPEN HF bands.
Saturated? By all the codefree Kims? Not a chance.

> radio, along with contesters, rag chewers and W5TIT types.

I *have* stated the personal view that "hard core, stomp-em into
the dust DX/contest types don't present the best amateur practice"
... for example, it's just plain rude when the pileup continues calling
long after the DX station has already (tried to) respond to a station.
(I remember reading in the ARRL operator's guide many years ago
"listen before transmitting," " be courteous," etc.)

Having said that, I've worked, as of this moment, since upgrading
just about 3weeks ago, 72 countries, 40 states and all but one
Canadian province (Labrador), using 100w and either a multiband
dipole at 20 feet or a ground mounted trap vertical ... all without
EVER calling "CQ" ONCE. (Just to counter previous assertions that
the first thing I'd do upon upgrading would be to start "shouting CQ
DX" :-) I'm sure that some will criticize me for having a bit of fun
with my new privileges ... tough.

I don't recall "bad-mouthing" rag chewers in general ... there's nothing
wrong with conversation ... however, some of the incessant banter
about the problems of aging ... well... gets old :-)

I don't believe I've ever made a comment one way or the other
regarding "W5TIT types" ... as far as I'm concerned, W5TIT
is simply another callsign ... an arbitrary combination of letters
and number, which uniquely identifies a particular station/op ...
if anyone else wants to make a big deal about that callsign,
leave me out ... I'm not interested in the incessant argument
about such inane subjects.

73,

And jump right back out again if the 15% renewal ratio of the codeless Tech is any indication.
May not necessarily be bad but it is an effect that needs to be recognized. I have no objection to the present Tech if it is detuned to be the bread-and-milk ticket it was always designed to be or a relatively simple entry ticket -- it let a lot of us OTs wander around and learn by breaking things. We differ slightly on the All-privilege ticket which is not going to guarantee competance but should probably guarantee experience which is really what the code tests did. And the privilege of giving exams should be 2 years minimum.

Careful there, Dick. The original tech class is now grandfathered
into general class. We HF generals used to have a lot of respect
for the techs who dared to experiment with VHF/UHF.

Uhhhhh Dick, the ARS is the 'United States of America Amateur Radio
Service'. Was Marconi licensed as a US amateur radio operator?
Do you know who was the first amateur radio license issued in the
US? Do you know who was second?

> > Percent is probably not
> > the best way to look at things.
>
> Especially since it causes discomfiture to your stated position.

What makes me uncomfortable is that one is 100% of one and one is
0.000147% of 680,000. It reminds me of the time my company cut
everyone's salary by 10% and then later increased everyone's
salary by 10%. The company said we were back where we had been
but it wasn't true.

> > Absolute number comparisons seem to
> > me to be more important

>
> Well, that tells us you've been somewhere besides on the air lately. Our resources
> are anything BUT saturated, ...

Uhhhh Dick, you are the one who said hordes of CBers and freebanders
are invading ham radio. You cannot have it both ways. If "our resources
are anything BUT saturated" then the CBers and freebanders are NOT
invading ham radio and increasing the ham population by lowering
the hoop that hams must jump through is probably a good thing.

I would certainly prefer W5TIT's in ham radio over more Dick's.

Your phrase, "the all is more than well", reminds me of
my three year old grandson who said, "one leg is both the
same".

Dave, maybe I'm naive but I just don't see anyone holding a
gun to your head (or anyone else's) to force them to buy a home with
restrictions!

Sure, it might be less convenient to find a home without
them--it may not be in "quite" as desirable a neighborhood (one reason
the restrictions probably exist in the first place), but that's a
trade off you make when you insist on certain requirements in a home.
For instance, if you want a home with three bedrooms, three baths, and
a large yard, you may not be able to afford to live in as exclusive a
neighborhood as if you wanted one with only two bedrooms and two
baths. That isn't unjust restriction--it's fair trade.

The FCC isn't letting hams down by not forcing neighborhoods
to accept ham antennas--it's allowing the residents to set their own
rules. If you look carefully at most restrictions, it isn't the
existence of an antenna that is banned (they can't--that DOES
violate the FCC ruling on home entertainment antennas), only its size
(it would be easy to defeat a restriction that was based on use not
size in any court--i.e., you can ban a 40' tower, but you CAN'T ban an
antenna for amateur use if an equivalent sized one for TV use is
permitted--that's discriminatory regulation). I live in an area with
just that kind of restriction and do quite adequately with a flag-pole
antenna (most neighborhoods DO permit a flag-pole with a US Flag,
which makes a great 18' to 27' vertical) and an MFJ Super Hi-Q loop on
the roof (about the same size as my legal DirecTV dishes and thus not
subject to limitation) that handles 10m-40m--according to both
experience and printed reviews it does just as well as a typical 40m
antenna system, and does so in a fraction of the space. I also have
antennas on my car (which restrictions CAN'T prohibit) and a small
2m/70cm antenna on my roof that isn't even noticeable from the street.
That may not be optimum, but I didn't buy my house with the thought in
mind of setting up an antenna farm--for that I would buy a home on
acreage in the country.

Frankly, ham or not, I can see some of the objections. A 40'+ tower topped by HF beams CAN detract from the appearance of a neighborhood from a non-ham perspective. The people who live there bought, in part, because their neighborhood DID have such restrictions--why do you feel it fair to deprive them of the right to live where there are NOT "unsightly" antennas simply because you choose to move to their area? It isn't discrimination to want to live where the neighborhood maintains a specific appearance. For myself, and most hams, that's not the kind of neighborhood we want (I bought this place knowing I would ultimately sell it and move where I could have an antenna farm), but that doesn't give us the right to demand that others agree with our interests.

As Cecil (and others) have pointed out, you agree to those terms when you sign the purchase contract. Failure to learn about them prior to the sale isn't a legitimate reason to complain that they exist--it's incumbent on anyone who signs a contract of ANY nature to know the specific terms and restrictions applicable to that contract. Anyone who buys a house without a careful examination of the title and a search to insure no objectionable restrictions exist, frankly deserves what he or she gets--it's no more excusable than signing a credit contract without knowing the interest rate, repayment method, or term of the contract. Fools do NOT deserve protection from themselves.

Perhaps a few FCC officials think the spectrum could be put to better use,
but I doubt that this is a hidden agenda of the Commission as a whole.

Never use a CATV cable sheath as a transmitter rf ground.

RF ground is RF ground. Always separate unless one likes rf current
flowing all around the house.

Just like teaching a pig to whistle, the result is poor and you
annoy the pig.

Actually, there's a way to get a mezzo-mezzo electrical ground.

As most electricians find out the hard way, it's not the
conductivity of the pipe that makes the ground, it's mostly the
conductivity of the water therein. A dry metal pipe has much lower
conductivity than one filled with water.

Connecting to a metal fitting tied into your system might work as an
poor-quality electrical ground.

Do not rely on it for an RF ground - in fact, do not rely on ANY
"ground" for that purpose unless you know EXACTLY where it goes,
what it connects to, and how long it is. Your "ground" may become
your "antenna".

But that is EXACTLY what the law allows - the preemption is
use-based, not size-based. The intent of the legislation is very
clear, and absent any consitutional violation, the courts look to
the intent of the legislation.

>Frankly, ham or not, I can see some of the objections. A 40'+
>tower topped by HF beams CAN detract from the appearance of a

Dialog:

Phil Kane, then W6VQM: "Ed, what does "of an unsightly nature" in
my CC&Rs mean?" (1968)

Ed Peck, K6AN, noted DXer and the dean of ham tower lawyers at the
time: "It means that you can put up any antenna that you want.
"Unsightly" is unenforceable."

(Ed went on to mentor me to do ham antenna litigation before he
passed away.)

>it's incumbent on anyone who signs a contract of ANY nature to
>know the specific terms and restrictions applicable to that contract.

And to be able to recognize when a term is unreasonable or can be
ignored because it is umenforceable.

That's where competent legal advice is mandatory.

Even dacades after _Shelley v Kramer_ one can write a racially
discrimibatory clause into a sales contract or set of CC&Rs. It
just can't be enforced.

From: "Richard McCollum" rmccollOMA@worldnet.att.net

>And jump right back out again if the 15% renewal ratio of the codeless
>Tech is any indication.

I think there are a number of factors. Many who entered as codeless techs did not jump out; they moved on and upgraded.

I would not have progressed very far in ham radio without the help of my Elmer, W1BNB. When the large influx of codeless techs occured, there were a lot more hams entering ham radio than available (or willing) Elmers.

Too, I have to wonder what the effect of the social factors of some small number of hams publically berating these newcomers for not being good enough to be "real" hams.

I just got finished reading a QST magazine and I get the impression that the whole damn amateur radio hobby is not encouraging to CB freebanders. I don't see one article about high power linears or freeband DX or radio mods to get 25 to 32 mhz transmit coverage. Don't you guys know you have to be nice to us and treat us with respect or we won't get our licenses and then your hobby will die? Who can I write to about this at the ARRL?

Glenn Baxter, K1MAN, is sending this notification. I don't know what he is trying to prove save for wasting his breath. I mean, who cares??
.....
.....

Subject: Re: Broadcasting

AMERICAN AMATEUR RADIO ASSOCIATION (AARA)
INTERNATIONAL AMATEUR RADIO NETWORK (IARN)
K1MAN BULLETIN SERVICE
FULL INFORMATION AT www.K1MAN.com

"AARA is your alternative to ARRL. We sponsor IARN, which is the most experienced amateur radio emergency communications organization in the world."

This is Glenn's claim. He cannot verify it and Who Cares??

"K1MAN bulletins have been heard world wide since 1987. Like W1AW, K1MAN transmissions are perfectly legal under FCC rules. Like W1AW, good amateur practice requires publishing a transmitting schedule and then sticking to it. It is far more disruptive to do otherwise."

And maliciously and deliberately interfering with ongoing QSO's is not "disruptive"? Is not rude? Is not ILLEGAL? And Glenn has the anabashed nerve to mention "good amateur practice"?

"Hams can be very childish and territorial about the use of amateur radio spectrum. Our surveys show that about 1 ham in 10 is against both K1MAN and W1AW one way bulletins. We are sure there are also those who are against contests, nets, etc. This is OK! There is plenty of room for everyone in our Amateur Radio Service. If you have a problem with this, try another hobby; you are probably not cut out for big time Amateur Radio."

Yes, Glenn. You can be "very childish and territorial about the use of amateur radio spectrum." Your surveys are just that....YOURS! No need to use the plural "our", Glenn. MY survey shows that 6 of ten active Amateurs are against the K1MAN broadcasts/intentional interference and my survey is just as valid and likely more accurate than yours. The comment, "you are probably not cut out for big-time radio" is laughable. And what makes you, Glenn, think that you are "big-time radio"? Your silly ego aside, I have news for you. The only thing "big-time" about you is the constant pain-in-the-ass that you are.
Perhaps you should try another hobby. It is quite obvious that you are not

cut out for Amateur Radio and hopefully Riley will make that point painfully clear to you, sooner rather than later.

"An experienced ham knows that if you are trying to talk to another station per a sked, you might have to QSY one or more times during any given hour. If you don't know this and practice this, you are not am experienced Radio Amateur."

You are not talking to another station, Glenn. You are maliciously interfering with good Amateur operators and you do so several times daily. It is YOU who should practice QSY'ing. One must therefore surmise that you are, in your own words, "not an experienced Radio Amateur."

"Actually, our amateur spectrum is UNDERUTILIZED. The commercial guys are drooling over our spectrum and would love to divide us and conquer us. They love to see us squabble and act like babies. There are even evil persons in the FCC (dressed like good guys) who are very subtly promoting and documenting amateur radio disruption under a long term private plan to assist commercial interests take as much amateur spectrum as possible. A primary function of AARA is to warn you about this frequency grab and to expose the corruption that exists within the FCC. Corruption is nothing new in American politics, and if you don't think that our amateur radio spectrum is worth billions upon billions of dollars, you are very naive."

Here we have Glenn's agenda in a nutshell. He's a conspiracy theorist. He thinks Riley is a government agent in the pockets of Big Business. Glenn....ever look up the definition of "delusional"?

"So, join the fun. Listen to K1MAN on 14.275, 7.224, 3.975, and 3.890 MHz. daily and also call in (207 495 2215). See www.K1MAN.com 73!

14.275 MHz. USB and 3.975 LSB at 1:00 AM to 2:30 AM;
3:30 AM to 5:00 AM; 6:30 AM to 8:00 AM; 4:00 PM to
5:30 PM; and also 8:00 PM to 9:30 PM. 7.224 MHz.
LSB at 3:30 AM to 5:00 AM. High fidelity amplitude
modulation on 3.890 MHz. at 6:30 PM to 8:00 PM.

(All times are in Eastern Local Time - In winter add 5 hours for UTC)
Join the fun! Get your unedited viewpoints on the air! 73 de K1MAN"

What "fun"? The real fun will begin when Riley comes knocking on your door! Go, Riley! Go!

The vanity program does make a history of the Codeless Tech a little hard to write but we see here the one's who did not upgrade. My guess is that the renewals you see are those who did obtain it for largely bread-and-milk reasons. Those expiring are no longer with us, a fact for which you seem to have two hypotheses, both of which hold them blameless and unload on the OT community.

The available Elmer shortage if correct tends to imply sheer chaos when the licenses become codeless which is a point I tend to agree with. I have argued here that the point is not whom to exclude or standards but rather how one absorbs newbies in any large number into a hobby with long standing traditions and practices. It is not the hobby to fear for but the bright souls who easily pass the new exams and are kind of left there scratching their butts. Roast no newbie before his time! Politics and 20 meters ain't beanbag. It is useful as hell for the newbie to have a friend -- and you have to hand it to Bert for lining up a battalion of them -- but at the very least having the time, inclination, and if need be (I think so) the requirement to simply listen for a while is worth consideration. It is always useful to ask which side of a firing squad

one is volunteering for.

The willingness of the OT community, and it is nice to remember we are still in the 13wpm days for this discussion, was a result of a fraud: selling the Codeless Tech as the entry-level license for Amateur Radio. It was left to the OT community to deliver a message that was about as popular as creamed pork chops at a bar mitzvah: ye shall know the truth and the truth will make you work. As a practical matter, a new CT was going to take up the gauntlet in the first 6-9 months or so or he was not ever going to do it at all. So one was encouraging for a while and ultimately wrote the man off. If indeed your shortage argument holds water, what else would one expect the OT community to do except triage?

This had its sociological effects to be sure. We have all seen the classic Lifer Codeless Tech who becomes the resident genius in virtually everything, joins every group in existence, makes a pilgrimage to the OM's grave, and shows up at Dayton as regularly as the face of doom. We have seen an equally large number show up on the freeband. I have my opinions but let us leave it at that; some do not like the message and denial mode is generally not a thing of beauty. And having some fugitive from 27.555 regale the group with DXploits would not exactly win the Dale Carnegie seal of approval. They were misled but it was not the OTs doing the misleading. That some got a little bitter about it, joined NCI, and dedicated their lives to iconoclasm -- destroying Morse wherever it was found -- is simply one reaction to being told that you really do not own the Brooklyn Bridge.

The problem after 25.5 goes away is not the same problem that this was but it could very easily have the same effect: marching newbies thru like the four lines at Lenin's Tomb. There will undoubtedly be those who will write the same accounts that when dissected have the old Babushki doing the mile in 3:30 while crying for Evita, I mean Nikolai.

It seems to me that a lot more honesty with the outside world is in order here.

Who cares indeed. So why are you spreading joy and happiness across a
half dozen groups?

Neither the topic nor the writer deserve this much, particularly a bozo
who doesn't know his own name.

One of the reason the ARS exists is that we can do backup emergency
comms. There's enough of us so when the big hurricane or whatever
happens, enough of us with usable equipment survive to provide the
comms. Even if only 5% of ham stations survive, that would be enough.
No government agency is going to overbuild their systems by 20 times
as that is awful expensive. So they give us spectra to play with on
off times so we buy/build our stations and have fun. Also presumably
enough are tuning about on our transceivers looking for some interesting
DX to find that distress call. Only thing is that station with the antenna
farm and linears is most likely to lend assistance. That's fine by me,
I don't need to be a hero if someone else can do it better. But if
noone has antenna farms anymore....

Actually, there ought to be less of "this," but, in general, I am in favor of the individual's right to defend his life/property with the threat and/or actual use of deadly force. Having said that, I believe that that deadly force should be used only when it is absolutely clear that a life-threatening situation exists. I am also a firm believer in having the firearms proficiency required to be able to hit a guy in the shoulder, versus the head or chest. Trust me, if I get a guy in the shoulder with a 230-grain slug flying out of the barrel of my .45 at almost 600 mph, he'd WISH he were dead, if he didn't actually end up that way! At any range within my own apartment, that would be an easy shot for me. However, my goal in life is to never have to do any such thing. The problem I have with you is you sound like you are ready, willing, and eager to shoot an intruder in your house.

Bob:

Actually, what they do is build a muscle car with a Pinto-sized chassis, and drop a Pinto body on top of it. There's nothing in the original Pinto chassis/running gear that would endure the high torque of a big, fully-blown V-8 running upwards of 750 hp. What you see hurtling down the track is a custom-made car that looks like a Pinto, but is far from it. Same as the NASCAR cars that look like Fords, Chevies, Dodges, etc. but that's just because the custom-manufactured fiberglass body shell is made to the same basic shape. All they have is the car manufacturer's name on them, and money behind them.

Or use a balun on the antenna so you don't have any common mode
RF currents on your feedline in the shack. A w2au balun or just use
about 20 loops 1.5 feet across of coax with some ferrite material to make
a 1:1 balun. See http://www.geocities.com/wa2ise/radios/ham.html

Ah...the old refrain "you are posting anonymously, you coward." Is that not
what you imply, Dick?
Maybe you like spam. It may be the only email you get. As for me? I prefer
to keep my real name and email address anonymous due to the lack of quality
that some of these posters have and all of them are Hams.
So there you have it, Big Dick. How I operate is my option, not yours.

They've been doing that for years, lotta deer in the park but they're
not the same deer which are doing the Petunias five miles from the
park. I suspect that they could wipe out every deer in the park and ya
wouldn't notice the dent. Pun intended.

Cows & pigs are not "natural"???? And yuk. Stuff tastes terrible. Last
time I tried it I thought I was eating an old shoe and yeah, it was
cooked "right". Maybe when they come up with a Black Angus Whitetail.

The annual number of big cat attacks on humans is miniscule compared
with the number of attacks on humans by their own and their neighbor's
dogs. I'd be a damned sight less concerned abt a mountain line roaming
the neighborhood than I would about a loose Pit Bull.

Can't hurt. I learned a long time ago to keep the speed down when
cruising the back roads via my eons of boonies commutes around here. I
wuz on winding hilly Providence Rd. one nite passing Ridley Creek Park
and caught something moving in the limit of my right side peripheral
vision and hit the brakes. The dude behind me damned near rear-ended
me and got all over his horn. We rounded the curve and there had to be
six-eight of the stupid things right in the middle of the road just
standing there staring at my headlites. Din hear his horn again.

Roger,

You cannot be a member of BARF, if you have received
warning letters from Riley! I thought you already knew this?
Sorry, I cannot accept your application for BARF membership.
However, if you have $20,000 I will rent you my QTH.

Stow the arbitrary and distasteful stuff, Carl. What you are basically saying is that if you make something easy enough that people don't have to know much to do it, folks will flock to it. It is an interesting concept. My last visit to a local club meeting pretty much confirmed my impression that we are headed toward an amateur service where not many folks know much about radio. I'm not saying that the folks there weren't pleasant. Most of 'em are simply lost in the fog.

Did you sit around for hours arguing with those who did know and tried to enlighten you or did you clam up and absorb the information?

One of the things I recall about my first few years in amateur radio is that I knew I didn't know very much. I listened to just about anyone who had something to teach me.

Truer words have never been spoken. If you present yourself under
fraudulent pretense, the best you can hope for is (are) fraudulent
responses so the whole effort of disguising your email identity is an
exercise of a clown in a transparent changing booth.
There's little purpose in being a crocodile (all mouth and no ears) when
registering posts on Usenet., If what you have to say is relevant
there's no overcoming need to fear spam if you take even the novice
approaches of NOSPAM in your address. Simply shouting shit with your
ears plugged puts you into the category of yammering old cat-women
pushing shopping carts in the middle of a one-way street
Apart from the lack of adapting the same uzenet approach as the
grown-ups, one can only consider you as a kid who snuck into Mom's
bedroom to mess with the computer.
For that reason alone I'll not use my favorite bad words with you lest
there be some law in your area about mouth-whipping stupid pre-teens..

Oh, my. Aren't we a hoot? Now humor me if you will. Just what the heck is
the bottom line you were attempting to convey?
Name-calling aside, what is your point?
Using no-spam in an email address is so easily thwarted. Is that what you
propose I do? My...how mypopic.
Should I use my call sign? Is that "macho"? Do so if you wish, but gird
yourself for the dedicated stalkers that will look up your call sign and
flood your home mailbox with magazine subscriptions, junk mail and other

sorts of deviltry.
Your choice of words is interesting, though for the most part grammatically rife with errors. You might wish to seriously consider a remedial course in English Composition 101.

You just keep paying attention to the admonitions in the ARRL "How To
Operate" pubs sweetums and we'll see who whacks who in the pileups and
contests. Go for it, less QRM and more confirmed for me, dit-dit.
While yer at it tell the Dallas Cowboys to get polite because it's
only a game.

Good point Squig, glad you brought it up. TAPR has been futzing with
some FHSS boards since 1997 in their thrust to get FHSS running in the
902-928 Mhz ham band and they still ain't there. Given your assorted
chunks of bluster about your "leading edge technical accomplisments"
in this general field and your widely broadcast "thoughts" wrt to
these kindsa modes being the "future of ham radio" I find it rawther
odd that nowhere in the TAPR website is there any mention of any of
your contributions to their effort. Care to comment on this peculiar
state of affairs??

Well, thank you for pointing out that correction, Hans. It's not that I didn't understand, though. More that I missed the part about the plumbing. I should pay more attention to the full text of what Larry posts...er, maybe.

You know what's pitiful? The holder of a callsign like W5TIT is considered by some folks (we won't mention names :o) to be vulgar, degrading, or take your pick of any other you'd like.

But, the behavior of those people is quite OK. I have to be a good little girl on ham radio; but they can be what they are any time they wish. I snicker....

Oh, I forgot to answer your question.

I wouldn't know. The extent of my basic knowledge of grounding ends at knowing that copper plumbing will work in a pinch. I've never had to know, and only know that by osmosis. I have a yard that I just bury a copper rod into. One CBer I used to know had a ground wire going out to the lake he lived on...go figure, eh?

Yes, and no. Those of us who aren't ashamed of what
we post have no problem identifying ourselves. The rest
of us should go to newusers and read the netiquette FAQ.
If one does not understand the simple concepts stated there,
one should probably not be armed with a computer.

> Do so if you wish, but gird yourself for the dedicated
> stalkers that will look up your call sign and flood your

That's bull. I've been appending my crudely de-spammed
e-mail address and call sign to my USENET posts for over
ten years, and the little spam that I receive is the result of my
having a domain name (the address is different). It's funny
how anonymous cowards come up with all sorts of reasons
to justify their childish behaviors. Sorry, it just won't wash.

Man, the "big guns" sure do get pissed off quick, don't they?! ROFLMAO....
Do you DX/Contest types realize how much your attitudes are a turn-off for
enthusiasts of ham radio, and probably a certain turn-away for anyone who
might get interested and then listens to such chest-thumping? Bad side of
ham radio, that chest thumping.

Statement: I can't stand the color yellow.

Response #1:
You are too stupid to realize the value of the color yellow.

Response #2:
(Includes more reference to the stupidity comment) and adds: Your low-class, trailer trash living life-style is a huge screen to your ability to see beyond the single color you've chosen to master life with.

Response #3:
(Includes more reference to the stupidity comment, but drops the low-class comment because it made absolutely no sense) and adds: If you would take the time to read and understand, you would know that the color yellow is important to the very nature of our society.

Response #4:
Will keep all of #3 and add: What color yellow are you talking about? Be clear and concise in your communication and maybe you'll be able to play with the adults.

And, so it goes... :)

OK, Mark. Call the shots the way you see them. If it makes you feel better
to call names, go for it. Maybe that is what it takes to make you feel
better about yourself....perhaps you feel a need to do this to bolster your
self-image.
I, in the meantime, will continue to carry on as I have done for so many
years now. Your input is inconsequential. Your name-calling is even less
relevant.
I hope you feel better about yourself in the morning.

523. Re: Victims of W4AMP

Somewhere along the line the original thread of this post was "lost".
W4AMP is probably pleased that the jist of the conversation was steered away from his infamous and malicious acts over the past few years.
Do not forget for a minute that AMP is two-faced and has a malicious streak.
He is not to be trusted in any way, shape, or form.
He will be your buddy one minute and the next he will be jamming you. He is an accomplished liar. He will accuse others of stalking while he stalks others with spam, anonymously sent magazine subscriptions, false bills of lading and more. He will present himself as a victim while all the while victimizing others.
The mark of a Psycho....suffering from mental problems....

I should refrain from responding to this tripe, but it is late and I rather
enjoy toying with the mentally inept.
Mmmkay. Gnight.

My "troll" obviously bore results. You could not resist responding, could
you?
And speaking of "balls", you of all people are hardly adept at describing
same.

OK. I will tell my mommy to turn off my account with the express intent of
not bothering you any further.
Also, given the impression that you are yourself rather juvenile and
somewhat limited in your ability to express yourself, I will cease making
you look like the fool you are.

Less than 1% of the spam I get daily comes to this address. (or any
of the variants) Most of it comes to my Yahoo address that I haven't
sent anything from in months.

>Should I use my call sign? Is that "macho"? Do so if you wish, but gird

My call sign is listed with my home address. Everything else goes to
a P.O. box. All of the 'personalized' junk mail (stuff to "Current
Occupant" and "Resident doesn't count, since they obviously haven't
looked anything up) ends up at the post office.

Yes, I call a spade a spade. And the little spam that I have
received is a simple *fact* after a thousand posts over more
than a decade. Your "fear of spam" smokescreen is weak.

> If it makes you feel better to call names, go for it.

Huh?

It is a shame that you refuse to learn from others.
I have learned much from these groups over the years.
Have you read the new users FAQ?

It is your choice to continue to ride your bicycle on the
wrong side of the road, but others will think ill of you for it.
I would have e-mailed you politely and privately,
but you didn't have the decency to provide even a
de-spammed address. Even Joe Mama does that!

Markie...you made my point so eloquently! You "would have emailed me"? That was my point exactly. You would have spammed me....that is what unasked-for email is.
You stated, " I would have e-mailed you politely and privately"....
Markie....Markie....get a grip. You have NO business emailing me either politely OR privately.
Markie...do yourself a great big favor...bend over and take a good, long look at yourself.
See that big old brown eye staring you in your face?
That is Mark Walsh in the flesh.

Instead of answering me here (and worsening the signal
to noise ratio), you could have e-mailed me. I am sorry
to the others in this group that there are those who make
a mess of the USENET. This is like using a linked repeater
system (with many listeners) to talk to the guy just down the road.

> You stated, " I would have e-mailed you politely and privately"....
> Markie....Markie....get a grip. You have NO business emailing me either

So you (and I) make a mess of the newsgroup instead. :-(
By extention, you then have no business responding to my post.
Gosh, what happened to the days when all hams were good
people and good communicators? Like most in this group,
I am proud of who I am and what I have done for amateur radio.
Let's try get this group back to amateur radio. Good night all...

And then NASCAR's Bill France owns a few tracks where sheer survival is
questionable and kills a few drivers. Right up there with gladatorial
games except the Romans did not plant land mines in the Coliseum.
Whatever else it may be, NASCAR ain't racing.

>> > > population. Population grew about 40% from 1970-2000
>> > > while ARS grew about 250%
>> > >
>> > > Cheers,
>> > > Bill K2UNK

Let's look at what happened more closely. Here's a summary:

US Hams:

1970: 270,000
1980: 350,000
1989: 500,000
1990: 514,000 (interpolated from 1989's 500,000 and 2.84% growth rate)
2000: 680,000

It has been shown previously that the growth rate from 1977 to 1989 was 3.61%
but that it dropped to 2.84% from 1989 to 2000.

Combining with population figures we get:

Year - US population/annual growth - US hams - % hams

1970: 203 million 270,000 0.133%
1980: 227 million 1.12% 350,000 0.154%
1990: 249 million 0.93% 514,000 0.206%
2000: 281 million 1.22% 680,000 0.242%

US hams as a percentage of population increased 0.021% in the '70s, 0.052% in
the '80s and 0.036% in the '90s.

So the growth SLOWED after the introduction of code test waivers and the Tech
lost its code test.

>> > Yes, but it also looks like the big increase in the slope
>> > of amateur growth relative to population came after
>> > the no code tech license provided a more reasonable
>> > entry point ...

NO. WRONG. Just the opposite:

1980 to 1990: 0.206/0.154 = 1.338
1990 to 2000: 0.242/0.206 = 1.175

In other words, the percentage of the population that had a ham license
increased 1.338 times during the '80s but only 1.175 times during the '90s.

The "slope of the line" DECREASED "after the no code tech license provided a
more reasonable entry point ..."

And we have not allowed for the effects of the change to 10 year licenses,
which does not begin to show until 1989.
>>
>> ...especially since the Novice license, the class really intended as
>an
>> entry level license, was done away with. It stands to reason that,
>if

>arbitrary, and distasteful (to many) barriers to entry, those who
>were interested, but disuaded by those unnecessary barriers
>will "jump in."
>
Except that's NOT what happened, according to the numbers. Growth DROPPED
during the '90s, compared to the '80s.

If anyone has more numbers, please post 'em.

And some were victims of the actuarial tables, as they
entered ham radio late in life after being kept out by the
code barrier for many years (years during which many
could have been good, productive hams ...)

> I would not have progressed very far in ham radio without
> the help of my Elmer, W1BNB. When the large influx of
> codeless techs occured, there were a lot more
> hams entering ham radio than available (or willing) Elmers.
>
> Too, I have to wonder what the effect of the social factors of
> some small number of hams publically berating these
> newcomers for not being good enough to be "real" hams.

I personally know of some who felt " I thought this was going
to be nteresting and a nice crowd of people, now I find out
hams are a bunch of ***holes. I don't need to put up with this
crap from idiots of this caliber ... to hell with it."

Unfortunately, I believe we lost quite a few folks who were and
would have continued to be good hams because of the bad
behavior/attitude of superiority which was foisted upon them by
some other hams (individuals, who IMNSHO, are NOT good hams).

I saw evidence of this at a summer picnic of a local ham club summer
before last ... there was a table with a bunch of "CW Olde Fartz" who
sat there bitching about how "the techs aren't REAL hams" and a
couple of tables of techs ... all of whom were well-behaved, both in
person and on the radio, and greatly resented the abuse the CW
Olde Fartz were tossing at them.

In fact, one of the guys at the first table, (a CW DX "I'm superior"
type) who wrote a column for the club newsletter, wrote an totally
outrageous anti-tech rant, which caused such a fuss that he was
forced to abandon writing his column ... which was no big loss,
since most of the time it was focused on what a great DXer he
was and how the best DX clubs were "by invitation only" and
didn't accept anyone with less than an Extra license.

This sort of "I'm superior, you're a piece of crap" attitude
(inflation
of self-importance) has no place in ham radio. I've passed the
Extra, and the reality of my professional experience is that I know
a lot more about radio technology than many hams, but that doesn't
make me "better" than a newbie tech ... just more experienced.

It doesn't give me, nor do other examples of experience or skill give
anyone else, the "right" to berate, insult, and degrade other hams.

Highly doubtful Carl would associate with non technical hams, but we'll
give him this one ;-)

>
> In fact, one of the guys at the first table, (a CW DX "I'm superior"
> type) who wrote a column for the club newsletter, wrote an totally

>
> This sort of "I'm superior, you're a piece of crap" attitude
> (inflation
> of self-importance) has no place in ham radio. I've passed the
> Extra, and the reality of my professional experience is that I know
> a lot more about radio technology than many hams, but that doesn't
> make me "better" than a newbie tech ... just more experienced.

Here we go. I read a bunch of Carl's google stuff and noticed the above
pattern. If history is correct, he'll start berating people by posting
his resume of jobs , followed by a complete list of equipment that
99.99% of amateurs would have unless they have a job that requires it.

See, DX types can brag and be assholes according to Carl, but when Carl
does it, it's OK. YES IT'S HIS OPINION and he's entitled to it, I grant
you that, BUT he's no better then the DX types he hates,.. And by the
way Carl, your google postings show, for the record a profound hatred pf
DX, contest and rag chewers. According tor many posts ing the past,
only those that follow Part 97 to the letter of the law IE: the techno-
experimenters, had any business being hams. If fact, to paraphrase you,
"lawyers and doctors and regular people who do no experiment, do not
deserve amateur licenses because they fail to follow Part 97's example
for maintaining state of the art experimentationn."

>
> It doesn't give me, nor do other examples of experience or skill give
> anyone else, the "right" to berate, insult, and degrade other hams.

Gee, what a great statement from one who seems to live for berating,
insulting and degrading other hams

Sorry Charlie, you just lost your argument based oin this statement
alone

Why are codeless hams more likely to cause "chaos" than
coded ones? I don't get that one ... please explain.

> I have argued here that the point is not whom to exclude or
> standards but rather how one absorbs newbies in any large
> number into a hobby with long standing traditions and practices.

Heaven forbid that some of those "long standing traditions
an practices" might actually change a bit (after all, ham radio
must, for all time, remain ever as it was, right?) NOT!

This is not to say that everything would/should be turned
upside down over night ... but like everything else, ham
radio will have to accept *some* change over time in
order to remain relevant ... otherwise, it will ultimately go
the way of the dinosaurs ... unable (unwilling) to adapt to
changing conditions, thus unable to survive.

> It is not the hobby to fear for but the bright souls who
> easily pass the new exams and are kind of left there
> scratching their butts.

This still seems to presuppose that the exams are, in
fact, "easier" than those "back in the good old days."
I don't buy that ... and I think it's just an excuse used
by some old timers to assert that "newbies got a freebie,"
"newbies aren't *real* hams," etc.

As far as newbies "left there scratching their butts" goes,
so they may make a mistake or two as they learn ... how
many old timers could HONESTLY state that they NEVER
made a mistake when they were newbies (or can actually
remember accurately back that far, rather than conjuring
up a convenient, nostaligic "happy days" version of the past?

> Roast no newbie before his time!

Why roast them at all? (Unless of course they demonstrate
repeatedly that they are simply intent on being disruptive ...)
Let's just welcome them and help them (nicely and politely,
not insultingly) to learn the "ins and outs" ...

> This had its sociological effects to be sure. We have all seen the

> found -- is simply one reaction to being told that you really do not
own
> the Brooklyn Bridge.

OK ... now, let's set things straight ...

1st ... NCI's membership does not consist of "classic Lifer Codeless
Tech(s)," as you imply ... most of the NCI Board are Extras or their
national equivalents thereof ... and the membership consists of a very
broad mix of all license classes. Some of those who have been most
supportive in terms of financially supporting the organization are
long
time, 20 wpm Extras ...

2nd ... NCI's members are not "fugitives from 27.555.

3rd ... NCI is not "dedicated to ... destroying Morse wherever it is
found" ... NCI's objective is SIMPLY to eliminate Morse TESTING
requirements on a global basis ... we do NOT have any goal
WHATSOEVER of getting Morse usage banned or restricted
in any way.

You seem to feel that, Morse will "be destroyed" unless everyone
is forced to learn it by regulatory fiat ... that doesn't project a
very
confident view of the value and desirability of Morse ...

If it can be done, a spammer can (and will) undo it.

>
>
> That's bull. I've been appending my crudely de-spammed
> e-mail address and call sign to my USENET posts for over

Well, goody for you, Petunia! The rest of us have had diametrically opposed experiences. I've been hanging around Usenet since it started, and never felt the need to disguise either my email address or my identity until the thundering hordes showed up on the Internet during the middle 90's. Just recently, I made an announcement via a moderated announce newsgroup and the spam immediately began (since it was a disposable email address generated JUST for the announcement, I know how the address was obtained by the spammers).

> ten years, and the little spam that I receive is the result of my
> having a domain name (the address is different). It's funny
> how anonymous cowards come up with all sorts of reasons
> to justify their childish behaviors. Sorry, it just won't wash.

Sorry, Petunia, your so-called "reasoning" doesn't wash either. The spamming is only part of it; the other part consists of stalkers.

Example: Two hams who have regularly posted to the rec.radio.amateur hierarchy in the past have harassed other posters by doing such things as calling their employers (even phoning Hawaii in one case), their neighbors, or their ISPs in an attempt at slander. One ham who still posts here under a pseudonym had to obtain a court order in an attempt to put a stop to the harassment. Another has had similar harassment by a non-ham, and is currently experiencing telephone calls and calls by "investigators" to his neighbors, again for the purpose of slander.

The standard response at this point is "take it to the police" or some such other nonsense, but the experienced harassee soon learns that there is actually very little relief to be obtained that way. I don't have

enough patience here to tell you about the failure of a court order to protect at least one ham from stalking. As with all things, an ounce of prevention is worth a pound of cure, and the best way to deal with the creeps who now hang out on Usenet is to never give them the opportunity to stalk you in the first place. The two people currently stalking hams IN THE REC.RADIO.AMATEUR HIERARCHY are both convicted felons.

Nice, eh?

> Mark Walsh ***** mark@die.spam.die.km6xu.com ***** http://www.km6xu.com
-----------------------^^^^^^^^^^^^

Hahahahahaha! Continue to dream on, Petunia.

P.S. You need to learn the realities of true anonymous posting (which this is not). Any law enforcement agency can obtain my true identity by contacting my ISP with a subpoena. A truly anonymous post, such as those made through a mixmaster chain, cannot be traced.

BOLOGNA..you have painted a broad picture of your complete dislike, nay, hatred of the aforementioned groups as they have no need for licences because they rarely if ever experiment as per your beloved Part 97.

> Having said that, I've worked, as of this moment, since upgrading

With a homebrew transceiver? Probably not. With a home brew trapped vertical? Nah, probably either a Cushcraft or possibly a Gap. That seems the antennae of choice for the appliance operators.

By the way, according to google, it wasn't that you were going to call CQ, cause it;s doubtful most DX types would respond to someone who has vilified them so much in the past. It wASA that wou were gooijng to take you license, buy some store bought gear and start chasing DX,mstates, counties, IOTAS and such. A sure enough, it's exactly what you did. No experimentation needed, just plug and play.

Just remember Carl, always use your lass twp when calling the DX net-meister and remember if you can't work em on 14.247, you really aren't that smart.

Welcome to the DX world, I know I'll be listening for you. Keep smiling and keep experimenting. The amateur world needs more consumers like you.

>
> I don't recall "bad-mouthing" rag chewers in general ... there's nothing

I guess as long as they experiment it's OK?? ;-)

OH..BTW, my AT&T 900 mhz phone has crapped out for 5th (really) time.
Since you designed the circuitry, can I send it to you. The morons at
their repair department keep telling me that the transmitter seems ok,
although there's a possible intermittent short?? Seems the 1st time,
they forgot to solder the antenna leads....

Gee, must be great working for a company (jn some convuluted corporate
chart) that takes your product and puts it into another product therebye
assuring that your product won;t or can't work.

GL on the bands. Remember, you need at least 104 confirmed before tou
can apply for DXCC. And I would advise you to stay away from clubs
where you superiorty to the others won't cause any more problems. Talk
to Bill. I think AT7T might still have a club. They coudl meet in the
Bedminister facility. Plenty of meeting rooms there

That's NOT what I'm saying at all, Dave ... I don't view the current system as "dumbing down" ... and I don't view the impending elmination of Morse testing as a "loss" ... you keep asserting that "It's too easy to get a ham license." I disagree ... I don't think it's "too hard" but I think it's "just about right" except for the continuation of Morse testing, even at a 5 wpm level.

Again, my view is that the license is a permit to "learn by doing," not a graduation certificate.

> It is an interesting

There are clubs and there are clubs ... some are very technically oriented, others are more general, and some are purely social in nature ...

As for your comment that "Most of 'em are simply lost in the fog.", by whose standards? (yours presumably) ... I can't really judge what that means, because, other than knowing that you think that codeless hams are inherently unworthy, I don't have a clear view of what you see as being "lost in the fog."

As someone else said ... "Roast no newbie before his time." I qualfied that with "Why roast them at all (unless they repeatedly demonstrate that their intent is to be disruptive)?" Better to help and guide them than to berate them in an effort to drive them

away ...

You have no idea of what other activities I'm also engaging in.

I never said I wouldn't chat with interesting people around the
world or otherwise use my newly-earned privileges ... what I
said was that the (past) lack of HF access precluded me from
doing experimentation there. That restriction has now been
removed and I'm free to do other things as time permits.

Understood ... however, there are times when it seems no
matter where you tune you find the geriatric complaints theme
is prevalent ... and yes, I know ... there's that button (on my
transceiver it happens to be in the upper left corner) which
```

turns the thing off ... I use it when I can't find anything
interesting
to listen to or participate in (actually, I usually just turn the
volume
down and leave the rig on in the interest of keeping things at
a constant temperature to eliminate any warm-up drift.)

> The Steven Hawking net meets on 21.440 at 0100z.

Really? Cool ...Hawking is a REALLY smart guy ... I'll
have to check it out some time to see if you're just pulling
my leg ...

Trouble is, if the perp moves 5 inches fast, you either miss or get
him in the chest. If you aim at the chest and he moves 5 inches fast,
you still hit him somewhere.

Response #5:
All of those negative comments about yellow are true, except they really
apply to the color blue, you clueless, yellow-hating loser. We should
only allow people who truly understand yellow to participate in our great
hobby. The blue lovers are destroying it!

What model phone do you have? I didn't design the phones,
nor do I work for the company which made them ... I designed
major parts of a chipset which was used in certain FHSS
cordless phones. If it's not FHSS, I didn't have *anything* to do
with it ... if it is FHSS, I designed the chipset and a "reference
design," but not the product which (the other company) put into
production.

That's EXACTLY the point I was making ... it shouldn't be
a question of brute-force "who 'wacks' who" ... but rather
a question of operator skill (which is not related to how
hard they can "wack" others) and other factors ...

You seem to espouse the brute force "stomp 'em into
the dust" philosophy ... I'm disappointed ... I thought you
were a better operator than that.
```

> Hey Squiggy, wasn't it YOU who got into the ultimate inanity in this
> NG awhile back, something abt you pushing for allowing
> frequency-hopping spread-rectum comms on 20m??

Both Garry Coffman and I postulated conceptual designs
for digital systems that, in the 150 kHz from 14.000-14.150
could handle at least several 10s of thousands of 20 wpm
Morse equivalent QSOs with virtually NO QRM or congestion.
(something well beyond the capabilities of Morse technology)
The proposed technology was not FHSS ...

> state of affairs??

Frankly, I find the TAPR effort to be an unnecessarily complicated
approach to FHSS which will result in significantly higher cost than
necessary with little practical benefit and a lack of adoption by few
other than the TAPR development team. As a TAPR member, I'm
appalled at the amount of member funds which have gone into this
particular porkbarrel sinkhole ...

Kim,

You're absolutely right ... the "big guns" and "I can beep real
fast, so I'm vastly superior to you" types don't realize how their
attitudes are a turn off for "mainstream" radio enthusiasts (nor,
I'm sure, do they CARE).

It appears that their egos and self-worth are SO wrapped up
in their own misguided views of what ham radio is all about
that they can't risk the vulnerability posed by even considering
that there might be other (horrors, possibly even better) ways
than theirs.

Yeah, I think the latter is the key. I don't really have a problem with all DXers, Contesters, etc. I don't have a problem with folks who love the fine art of CW. I *do* have a problem with people who wield the very attitude you (and I earlier) mention--that of braggadocio. Just a bit earlier this week I was mentioning some all-but-two states contacts I'd had on a mobile station over one weekend. That I had no log of this fully negated that I was speaking truth. To the person who said that, it meant something. To me, I *was there* :) and know the truth so that's all I need. (I didn't do the contacts because I was out to "score." I did the contacts because I happened to buy the radio on a weekend when I'd be mobile most of--what better way to test a *mobile* rig?) I was mighty impressed with it--by the way it is the Radio Shack 10M mobile. Very easy to operate mobile, better

audio quality than I've heard mobile (it seems to "run quiet"), and not imposing at all. (We won't mention that since that weekend I've not operated 10M mobile).

One of the strengths of the Amateur Radio service is the fortunate fact that there are so many different views of what ham radio is "all about", and there seems to be plenty of room for all those views to have a place to play. My views as to what it's "all about" tend toward tinkering and experimenting, your's toward changing the regulatory scheme, others tend toward radiosport, QRP, public service, chatting with old pals, collecting counties/countries/islands/states/numbers, or whatever. Until you succeed in changing the regulations to outlaw those "views", I'll discount your arrogant rhetoric about "misguided".

With all kind wishes,

I took the use of "misguided" to mean the misguided views that what one thinks ham radio is about is what all hams should think ham radio is about. It does sometimes seem that the preferences of one are the junk of another--and that is OK until the junk of another is viewed as some sort of thorn in a side somewhere...

Ya see Kimmie, you wouldn't fit into Carl's world of amateur radio. You
do absolutely NO experimenting. You're into DX (sort of, I guess) and
he has no use for people who think they know it all. See, according to
google you seem to think yourself a self appointed radio cop, monitoring
who is legal and who isn't.

I suggest you research a bit before taking sides. Carl and
you..certainly aren't perfect together. You have no place in the google
world of Carl Stevenson. Come to think of it, I, as a medical
profession, and certainly a non techno-type am not. Cecil probably is.

Kim is not

I'm not going to speak for Carl, Bert, but my view of the CW testing issue is this: it is a barrier to some--even though I don't view it as a barrier to me. That it is a barrier for some gets my attention, because I can certainly understand their point of view. I learned CW (at 10wpm, I am told) for a 5wpm CW test to get my Tech+ license.

My opinion is that for a mode I don't personally like to use myself, I have no desire to learn it--it wastes my valuable time. But, for the Tech+ license I was *willing* to learn it at 5wpm. I used it once the night I passed to placate an "overzealous" friend who wanted to see me use it on the air, and have never used it since--have no intention of ever using it again...in fact, I'd be hard pressed to even know it now. I've never wasted my valuable time learning loads of other modes I have no intention of using. I've never wasted my time learning things about ham radio that, say, an experimenter might learn--because I am not an experimenter.

While it goes against the angst of some hams, I am one of those dreaded "light-duty" ham radio enthusiasts (if the term enthusiast can be used for my type of ham). The "hobby" of ham radio is a distraction for me, not an avocation. I do enjoy emergency communication, and some public service. What do I mean by that? I mean that I enjoy the storm spotting aspect of emergency communication because I've always enjoyed observing severe weather anyway--that I am a ham radio operator fits right in with that. I enjoy public service--but *not* in the middle of summer here in Texas in the 100+ degree heat; they can find someone else who wants to do that (I'll provide radio equipment, logistics, etc., but I ain't sittin' in no heat for some 'nidiot [said affectionately] bike rider who finds it compelling to push the physical limitations of mind and body by cycling in this Summer weather down here).

But, if pressed, i.e., in a severe or disaster situation, I would operate as needed for as long as needed, with a smile on my face and knowing that the time I *have* taken to learn operating skills specific to my

needs/want/interests can be of some value to the community. I also believe that emergency communication and public service is a major consideration for ham radio's "existence." In my opinion, experimentation would be the second-most point for consideration; however, I am not personally into experimentation (if I build, I build by specification and blueprint--not willing to "play"). There is an exception to that: I do enjoy experimenting with better portable communicating methods/practices. I used to do it a lot, but haven't now in a couple/few years. These things are not generally taught to hams in emergency communication. Concepts like remote control of a mobile radio with a talkie when you are a distance away from your vehicle; cross-banding; using those bells and whistles we never use on our VHF/UHF radios: paging, digital tones, encode/decode on simplex, pushing the limits of simplex by learning the extreme art of communicating and listening in worst case scenarios, (did you know if you key up and say a word or two at a time, the full message can often be fully understand? Know why?), etc.

I think the "hobby" of ham radio is there for anyone and everyone--I don't even particularly care about operating practice and being that involved in deciding good ham/bad ham issues. There's way too many frequencies to absorb myself with that. I hear operating practices I don't particularly "like" but I don't think I have permission to tell someone how to speak just because I have a license for ham radio--obviously they do, too. I *do* however, require and demand strict operating procedures for emergency communication, public service, and things such as NTS. In those situations, ham radio departs (for me) from enthusiasm to service--and in those situations we need to shine. It's just like at work, I suppose. When required to do so (meetings, serious projects, time-specific demands, when the manager is around...heh heh, etc.) we need to be forthright professionals with business as the motivating factor. But, in other situations at the office we can be just as lighthearted and relaxed as we would be outside work. I am fortunate to have never had a job where utmost professionalism is required at all times--and there are those. I couldn't do that, either. Oh wait, yes I could do it--I just wouldn't/don't want to. Just as I could learn CW at any practical speed, I suppose (maybe not, I've never tried). But I don't want to, don't have to, so I won't.

I think the government has a reasonable expectation to "test" for licenses--but I think it is an unreasonable expectation for our government, or anyone else, to have people learn something they don't intend to use. I think the provision of the word "barrier" is probably more severe than reality--it isn't a true barrier in that one cannot learn it (unless deaf, etc.). But, in the spirit of the game, it is a barrier for those who don't wish to learn it. I have no problem with learning whatever for a written test--and I've been a proponent of such strict written testing that I probably wouldn't spend the time to learn for--but I am not in support of any kind of "mode" testing. It sets the stage for the very kind of attitudes we often see displayed here, and gosh knows that we hear on the air. Heck, the license itself is enough of an ego-maniacal booster for some!

Hey, Bert:

Here's an example of that long post I just made a few minutes ago. This guy is so wrapped up in what his ham radio should be (for everyone else) that he even has a preference for what type of equipment people should use. Plus, he acts like he knows me...

Guess how much credence I lend to this?

>

Wow, I don't know who you are, probaby good 'ol Dickie--but I am about the furthest thing from a raido cop that could be. However, since you're so misinformed that you think I am into DX, then your ignorance in other areas is certainly warranted and no surprise.

Now, on to your comments about my fitting into "Carl's world" of amateur radio. If Carl has a propensity for fitting square pegs into round holes, or v/v, then he can kiss my not-so-royal ass. So can you. (Carl, I *don't* think you do as noted, though).

>
> I suggest you research a bit before taking sides. Carl and
> you..certainly aren't perfect together. You have no place in the google

> profession, and certainly a non techno-type am not. Cecil probably is.
> Kim is not

As I said, your misunderstanding of what my needs are as a person are, well, warranted and expected. I fit into my world, Dorkie... If it's your game to fit people into others' worlds, and to fit yourself into one somewhere, I suggest you get busy. It doesn't seem there *is* a hole for you--round or square.

AMATEUR RADIO NEWSLINE(tm) REPORT #1273 - January 4 2002
(Total Running Time with RAIN Promo: 24:48)

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio, FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1273 with a release date of Friday, January 4 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A “V-E team” finds a way to test kids in one of the most remote regions of the country and the FCC again says no to expanding PRB-. These stories are first on Amateur Radio Newsline report number 1273 coming your way right now.

HAM RADIO TESTING REACHES WHITE MOUNTAIN ALASKA

Ham radio examinations have finally come to one of the remotest areas of the nation. This, after a team of examiners from the W5YI VEC perform a fly-in examination session in White Mountain Alaska. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

White Mountain is a remote fishing village in the far North-West of Alaska. It’s major claim to fame is that its the next to the last checkpoint for the famed Iditarod dog sled race. And it wanted someone to come in and give ham

radio exams.

The closest big city is Nome. White Mountain is only about sixty miles from Nome but its over some rather treacherous terrain. There are no roads in or out and all supplies to White Mountain have to be delivered by plane or boat.

But White Mountain does ham a ham radio operator for its mayor. He is reindeer farmer Tom Gray KL0CQ. And one of its school board members is Eric Morris KL7HT. Both will tell you that a temperature of minus 40 degrees Fahrenheit and a wind-chill factor of minus 100 degrees is not uncommon in winter. These were the conditions faced by a four member W5YI VEC test team when it chartered a plane and flew in on December 11th to administer exams to four adults and fourteen youngsters who were determined to make ham radio a part of their life.

The trip which cost $800 for the flight alone was sponsored by the Seward Peninsula Amateur Radio Club. Braving the weather were examiners Ramon Gandia AL7X, Michael Nurse KL7UJ, Scott Webber AL7RJ and Thomas Busch NL7H. Al four are from Nome. Most of those to be tested came from the Bearing Strait School District’s only inland school. They had all been studying for their Amateur license as part of a search and rescue course. Neither the applicant or the VE team were disappointed. All eighteen passed the Technician class exam.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Those involved in ham radio testing are keenly aware of the problems faced by remote areas of Alaska. At last July’s VEC Conference in Gettysburg Pennsylvania Jim Wiley KL7CC told the group that many applicants in Alaska are denied n Amateur Radio license exam due to the inaccessibility of their locations or the high cost of travel in that state. (W5YI)

**

HAM RADIO AND THE LAW: FCC SAYS NO ON PRB-1 EXPANSION REQUEST

Ham radio has lost yet another battle against deed restrictions, but the war is not over yet. At least that’s what the ARRL appears to be saying in a bulletin that describes the latest skirmish with the FCC over this politically volatile issue.

In the latest round, the FCC has affirmed a November 2000 staff-level decision that declined to include privately imposed deed covenants, conditions and restrictions under the limited federal preemption known as PRB-1. That’s the federal government policy requires municipalities to ''reasonably accommodate'' amateur communication in antenna-related zoning and regulation.

The ARRL last year appealed to have the full FCC review the earlier denial. The Commission turned down the League's Application for Review December 18 in a Memorandum Opinion and Order released December 26. As a result, it now looks as if the ARRL will bypass any further dealings on this issue with the FCC and will look for congressional relief instead.

The FCC itself even hinted that Congressional action by the ham community might be a next logical step. Its memorandum, opinion and order of dismissal did note that if Congress were to see fit to enact a statutory directive mandating the expansion of the FCC’s reasonable accommodation policy that the Commission would expeditiously act to fulfill its obligation there under. Translated: If Congress tells the FCC to include deed restrictions under the provisions of PRB-1, it will be more than happy to do so. (ARRL)

**

HAM RADIO IN SPACE: PROJECT JJ - HE EAGLE HAS LANDED

AMSAT-NA's newest satellite project, known as Project JJ for the past year, now has a new and official name. This, as AMSAT North America President Robin Haighton, VE3FRH, announces that effective January 1, 2002, the satellite will officially be known as 'Eagle'.

The name Eagle was submitted by Bill Allen, W7US, of Tucson, Arizona. It was selected from a list of forty-five names submitted by twenty-nine satellite operators.

For his winning suggestion, W7US will receive a free dinner at the annual AMSAT dinner held during the Dayton Hamvention. We will have more ham radio space related news later on in this weeks Amateur Radio Newsline report. (AMSAT-NA, ANS)

**

BREAK 1

Welcoming in the new year with ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the N7VGS repeater serving the Salt River Star Valley Wyoming and congratulating 13 year old Devin Cassity, on becoming the youngest ham in South West Wyoming. Devin is now KD7PHN.

**

EMERGENCY PREPAREDNESS: NORTHERN CAL TOWN CHOOSES HAM RADIO

Ham radio started the year with some very positive public exposure in the Los Angeles Times. The January 1st edition featured an in depth article about a Northern California town that will tap into older technology to prepare for future emergencies.

Worried that a disaster will knock out e-mail and cell phones, Los Altos Hills has decided to turn to its local ham radio community and make it the primary back-up to normal disaster preparedness communications. And as you might expect, the hams are more than ready to oblige

The complete story can be read at the Los Angeles Times website. The complex URL is http://www.latimes.com/news/local/la-000000203jan01.story. (Highlighted by ARNewsline™)

**

AMERICA AT WAR: POPCOMM COLUMNISTS SAYS “DONT TURN THE OTHER CHEEK”

Popular Communications writer Eric Force has some strong words that are obviously aimed at the pacifists who oppose the United States military retaliation against Osuma bin Laden and his al-Quida terrorist network. As a response to those he calls the “do-gooders of the world” who promote turning the other cheek, Force says to look, really look at the attack that brought down New York City’s World Trade Center twin towers. He then says that it could have struck a lot closer to them.

Force says and we quote: “Consider that it could have been you, your mom, dad, brother, sister other relative or a close friend in those planes and buildings who were terrorized, murdered and buried in the rubble.” He adds that just thinking about the incomprehensible terror, suffering and losses incurred by innocent human beings a the cowardly hands of international thugs continues to tear at his heart.

Force has dedicated his latest I-Waves column to the sights and sounds of September 11th that are available on the Internet and to the victims of the tragedy. Its a very compelling article. You can find it starting on page 66 of the January edition of Popular Communications Magazine that’s on newsstands right now. (PopComm)

**

AMERICA AT WAR: FEDS TO AID NYC TV STATION REBUILD

New York television stations will be getting federal help rebuilding transmitters that were destroyed in the September 11th terrorist attack on the World Trade Center. A total of ten New York area stations will receive eight point two million to offset the thirty million to forty million dollar price tag for purchasing and
constructing a new transmission facility.

According to the Broadcasting and Cable newsletter, Senator Charles Schumer managed to secure the funding as addition to emergency aid appropriation for victims of the attacks. As previously reported, there is some speculation that the replacement transmitting facility could be a 1500 to 2000 foot high stand-alone tower constructed near the former site of the Twin Towers. (Broadcasting & Cable)

**

ENFORCEMENT: NAL CANCELED

The FCC has canceled a proposed ten thousand dollar fine that it had issued to Jeffrey Alan Pettrey, This, for his apparent violation of Section 301 of the Communications Act involving operation of an unlicensed radio transmitter.

Back on July 30, 2001, the District Director of the Commission's Columbia, Maryland Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Pettrey for the infraction. Pettrey filed a response to the N-A-L on August 7, 2001 accompanied by documentation regarding his

inability to pay the proposed fine. After reviewing Pettrey's response, the FCC conclude that cancellation of the proposed $10,000 forfeiture is warranted based on Pettrey’s inability to pay. (FCC)

**

ENFORCEMENT: FCC CANCELS CONVICTED HAMS LICENSE

The FCC has canceled the Amateur license of Kenneth P. Kelly, WT2FBI, of Greensboro North Carolina after Kelly failed to show up for a re-examination. But at the time of the FCC retest order Kelly was otherwise occupied. He was fighting criminal charges in relation to a jamming case in Ohio. We have this report:

--
On November 30, 2001, Kenneth Kelly, the ex-WT2FBI was sentenced to 5 years probation by the Judge H. J. Bressler in a Butler County Ohio court. He had previously been indicted on a 4 th degree felony charge of disrupting public service by his jamming and talking on the Middletown Ohio police radio system.

At his hearing, Kelly agreed to a plea bargain. He admitted his guilt to a reduced charge attempted disrupting public services. At the time the FCC pulled his ham radio ticket Kelly was being held in the Butler County Ohio Jail pending sentencing.

By way of background, a person later proven to be Kelly was first noticed on the Middletown police radio channel the third week of July 2001. Initially the police dispatch radio system was not recording him but that was soon remedied by city radio technicians. After several days of taping, it was observed that the voice on the police radio was similar to one heard on the local 2 meter Amateur frequencies.

Several members of the Dial Radio Club then assisted police by monitoring and taping Kelly on the 2 meter band. Tapes from 2 meters and from the police were then voice printed the aid of computers to check similarities. Dial club members also tried to direction find and locate the signal both on 2 meters and on the police channel.

Through some luck, detectives working with a metro housing police officer and discovered that Kelly was now living in their jurisdiction. After they interviewed him, they felt that he was the person interfering. As the investigation progressed, he admitted to detectives that he may have accidentally transmitted on their frequency by accident. He claimed that his signal may have been mixing with an FM broadcast station and another ham repeater.

But Police did not believe it was accidental, because he was taped trying to talk directly to the police dispatcher and the cars. Later Kelly did admit his guilt and entered into the plea bargain. Now sentence has been passed by both the local court and the FCC.

For the Amateur Radio Newsline, I’m Burt Hicks, WB6MQV, reporting.

--

When he was finally caught Kelly had a Yaesu VX-5 hand held in his possession that had been modified to transmit out of band. The assistance of the Dial Radio Club members is credited with helping to solve this case.

Note: Information and documents from the case can be obtained from the Butler County Ohio Clerk's office or online at: http://www.butlercountyclerk.org/ Click on Butler County Court Records Search. Then enter Kenneth Kelly. (FCC, Dial ARC, others)

**

ENFORCEMENT: MITNICK TO FIGHT TO KEEP HIS HAM LICENSE

Another ham who appears to be getting ready to do battle with the FCC is former computer hacker turned talk show host Kevin David Mitnick, N6NHG. Amateur Radio Newsline’s Bill Pasternak, WA6ITF has the latest:

--

As reported last week, the FCC is challenging Kevin David Mitnick's request to renew his ham radio license. The agency claims that his criminal background raises a substantial and material question of fact as to whether Mitnick possesses the requisite character qualifications to be and remain a commission licensee.

Now, N6NHG has told the U-K Newspaper the Register: "It's just another example of them trying to harass me. Now I've got to spend money to keep a ham license."

Mitnick insists that he has totally abandoned his former ways. The Register article notes that that he was recently called to testify before Congress on federal computer security matters. Also that he spent two days briefing the U-S Commission on National Security on these issues. Mitnick tells the Register that he cannot understand why the government is now questioning his character.

Mitnick is currently the host of the radio program called The Dark Side of the Internet. It airs in the Los Angeles area from 5 to 7 a.m. Sunday mornings over radio station KFI 640 AM. And in a recent appearance on Coast to Coast A-M hosted by Art Bell, W6OBB, Mitnick said that he is hoping for a career in computer security once his term of supervised release from prison has been completed.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

The complete Register story and interview with Mitnick is on the web at a rather long and complex U-R-L. You will find it at http://www.theregister.co.uk/content/55/23494.html (Adapted from the Register)

**

INTERNET SECURITY: CIA GOES OUT OF ENCRYPTION COMPANY FUNDING

And speaking of Internet security, word that a Central Intelligence Agency funded company that allowed Web surfers to browse anonymously has closed. According to news reports, Emeryville California based SafeWeb enabled Internet users to gain access to the World Wide Web and browse sites through its encrypted service. This made their on-line habits and history untraceable. In the 2000 - 2001 fiscal year, SafeWeb received one million dollars in funding from the U-S Central Intelligence Agency's venture capital arm. (published reports)

**

HAM RADIO BUSINESS: AMATEUR RADIO TRADER CEASES PUBLICATION

Ham radio Internet auction sites may be responsible for a twice a month ham radio equipment sales magazine going away. This, after Amateur Radio Trader magazine announces that it has ceased publication.

According to Editor Barbara Patterson, KF4MMV, the Amateur Radio Trader was no longer a viable product. She says that the firm will be redirecting its resources into other areas.

Meantime, the company has also pulled its amateuradiotrader.com website off line. But unlike other publications which have gone under, in this case subscribers are being reimbursed for any outstanding issues. In addition to handling buy and sell ads, Amateur Radio Trader also donated page space to advertising the annual Newsline Young Ham of the Year award. (ARNewsline™)

**

HAM RADIO HERITAGE: MAKING WCC A PART OF THE FUTURE

A ham is campaigning to preserve part of radios past and have it become a part of the future. This as Lewis Masson, K1LJ-S, says that the town of Chatham Massachusetts should convert the site of radio station WCC into an Amateur Radio station along with a training curriculum to teach the kids in the area about communications technology.

WCC is one of the original Marconi Marine Radio Stations. Masson is an ex-marine telex operator at WCC. The site was recently turned over to the town of Chatham and Masson believes it is important to preserve the operations building as an operating amateur radio station and keep the hotel building as a museum to preserve and display memorabilia.

Masson says over the Internet that he has formed a committee to work on this project and that they are looking for nationwide support for this campaign. If preserving the past as an investment in the future is of interest to you, please contact K1LJS by e-mail to lemasson@juno.com. (Internet)

**

SPECIAL EVENTS: HAM RADIO UNIVERSITY 2002

A reminder the third annual Ham Radio University event takes place on January 20, 2002. Location is the Babylon Long Island New York Town Hall Annex with the doors opening at 9 a-m Eastern time.

Ham Radio University is a day of education about Amateur Radio. This there will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced Amateur Radio operator. The focus will be "hands on" with many demonstrations. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

For more information about Ham Radio University, please contact its Chairman Phil Lewis N2MUN by e-mail to n2mun@optonline.net. You can also get in touch with ARRL New York and Long Island Section Manager, George Tranos N2GA by e-mail to n2ga@arrl.org. Also check the Ham Radio University website for a full list of forums, directions and talk-in information. Its in cyberspace at www.arrlhudson.org/nli/hru2002.htm (N2DO)

**

HAM RADIO RECORDS: BEST OF THE WEST AND VHF CONTEST HONOR ROLLS

Tim Marek, K7XC, says that he has updated W6 / W7 & "Best In The West" VHF Contest Honor Rolls. They are now available at the following web sites.

http://k7xc.tripod.com/VHF_Records/index.html s the stand alone records page. http://k7xc.tripod.com/K7XCweaksignal/ is where individual links can be found to each contest. (VHF Reflector)

**

HAM RADIO SCIENCE: NEW 6 METER PROPAGATION BEACON IN WASHINGTON STATE

Rich Ewing, KO7N reports over the VHF Reflector that Bruce Shurtz, W7BAS, has installed a propagation beacon in gridsquare CN87TG near Kennmore Washington. It operates on 50.069 MHz putting out 10 watts to a 5 element yagi pointing 90 degrees. The beacon is operational 24 hours a day, seven days a week. QSN reports go to W7BAS, at his callbook address. (VHF Reflector)

**

HAM RADIO IN SPACE: VERY FEW LAUNCHES

Peter Guezlow, DB2OS, reported that 2001 has turned out to be the slowest year for space launches in nearly 40 years. Ham radio or otherwise. According to DB2OS, only 58 flights reached orbit, and there was one complete failure.

Guezlow says that historians note that we must look back to 1963 to find a year that produced fewer launches. He says that in 2000 there were 82 launches to orbit plus three failures. By contrast the most productive year was 1984 when 129 launches delivered payloads into orbit.

But there is at least one bright note. Russia successfully placed five satellites into orbit recently after launching them aboard a Zenit rocket. The cargo rocket, carrying three Russian, one Moroccan and one Pakistani satellite, took off from the Baikonur space center in Kazakhstan. (AMSAT, ANS)

**

HAM RADIO IN SPACE: NEW INDIA WEBSITE

The AMSAT-India website has been officially launched recently by the government of India and the Department of Space. VU2POP says that you can check it out by taking your browser over to www.amsatindia.org. (ANS)

**

CONTESTS: HUNTING LIONS ON THE AIR

The 31st annual Hunting Lions in the Air contest will take place on the weekend January 12th to the 13th. The contest period will be 48 hours and will run from midnight UTC Friday night to midnight UTC Sunday night, and all hams are welcome to participate.

According to its sponsors, the objective of this operating event is to create and foster a spirit of international understanding and cooperation among radio amateurs and members of the Lions Clubs through the use of world-wide radio communication. The contest also commemorates the birthday of Melvin Jones, the founder of the Association of Lions Clubs who was born at Ft. Thomas, Arizona on January 13, 1879. (Q-News)

**

DX

In DX, word that the recently postponed Ducie Island Dxpedition is on again for March. Ducie Island became a DXCC entity last November and it immediately jumped to the top of the most wanted contact list. But rough seas scuttle the first attempt to put it on the air. (RSGB)

Meantime 6 meters continues to be the V-H-F D-X band of choice. On Monday December 31st, Kevin Bishop WB8XX, says that he started hearing O-H-1-X-T at 1300 U-T-C on a backscatter path. From then on until 1620 U-T-C he worked 8 new countries and over thirty new grids in Europe and Asia. (VHF Reflector)

**

STRANGE TECHNOLOGY: ARE CELLPHONES KILLING GHOSTS?

Now, from radio communications to the effect of radio communications on supernatural communications. This, as a British expert who has spent years researching the occult says that cellular and other mobile phones are killing off ghosts. Don Wilbanks KC5MFA has the details:

--

No, we are not kidding you. In fact, Tony Cornell, of the Society for Psychical Research, has told the London Sunday Express that reports of ghost

sightings started to decline when mobile phones were introduced 15 years ago.

According to Cornell, ghost sightings had remained consistent for centuries. In fact, until three years ago the society received one or two new ghost sighting reports every week. But with the introduction of mobile phones 15 years ago, ghost sightings began to decline to the point where they are not receiving any.

And why are there no longer any ghosts being observed? Apparently paranormal events, which many scientists attribute to unusual electrical activity, my be drowned out by the electronic noise produced by cellular telephones and text messaging pager transmitters. And according to the newspaper, the lack of ghost sightings could adversely impact on the nations economy. It says that haunted tourist attractions in Britain could be under threat if the number of cellphones continues to grow from the present figure of about 39 million now in use in the U-K.

Don Wilbanks, KC5MFA.

--

And all of this begs that one question be asked. If ghosts are the spirits of the dead, how can anything actually kill them? (Science Today)

Doing what? Saying Emperor Cecil has no logical clothes?

>That is an infinitely narrow statement.
>There is no room for any deviation whatsoever.

Lemme see...

The statement:

"My statements are always narrow even if I don't specifically say they are narrow."

logically equates to:

"All my statements are narrow".

But any statement that says "all my X's are Y" is a broad, sweeping statement. Therefore the statement which claims that all statements are narrow is, itself, a broad sweeping statement. Which means it cannot be a narrow statement, even though it says it is a narrow statement.

But Cecil claims it IS a narrow statement. And Cecil only makes narrow statements, so his statement that it is narrow is specific to the narrow statement. If not, then Cecil is not, but if Cecil is not, then the statement cannot exist, but if the statement does not exist, it can be neither broad nor narrow. And existence itself is a broad sweeping statement while nonexistence is a narrow statement, so Cecil's nonexistence proves the truth of his statement, which cannot exist without Cecil's existence sooooooooooo

Daisy, Daisy, give me your answer do.......

>
> Dave, maybe I'm naive but I just don't see anyone holding a
>gun to your head (or anyone else's) to force them to buy a home with
>restrictions!

Nobody's talking about guns, Rick. In real life it comes down to practicality.
Many hams find themselves in a bad situation, choice-wise. Many would-be hams
simply wander away because it's simply too much hassle.
>
> Sure, it might be less convenient to find a home without
>them--it may not be in "quite" as desirable a neighborhood (one reason
>the restrictions probably exist in the first place), but that's a
>trade off you make when you insist on certain requirements in a home.
>For instance, if you want a home with three bedrooms, three baths, and
>a large yard, you may not be able to afford to live in as exclusive a
>neighborhood as if you wanted one with only two bedrooms and two
>baths. That isn't unjust restriction--it's fair trade.

It is interesting that you use the term "exclusive" to describe the
neighborhood. One of the meanings of the term "exclusive" is that entry was
forbidden to certain ethnic/religious groups.

In many housing markets today their simply isn't that much choice. In others,
there are plenty of options. But the tendency of builders to put in
unreasonable boilerplate restrictions is slowly but steadily painting hams into
a real-estate corner.

>The FCC isn't letting hams down by not forcing neighborhoods
>to accept ham antennas--it's allowing the residents to set their own
>rules.

Often those rules are unreasonable. The FCC IS letting hams down because they
are not taking the lead on this.

> If you look carefully at most restrictions, it isn't the
>_existence_ of an antenna that is banned (they can't--that DOES
>violate the FCC ruling on home entertainment antennas), only its size

Not true in many if not most cases. The classic restriction goes something like "no external antennas of any type are permitted". No size or use specified, just a blanket ban.

>(it would be easy to defeat a restriction that was based on use not
>size in any court--i.e., you can ban a 40' tower, but you CAN'T ban an
>antenna for amateur use if an equivalent sized one for TV use is
>permitted--that's discriminatory regulation).

Yet that is EXACTLY what the FCC is allowing!

The satcom folks went all the way to the Supremes over antennas that are literally the size of a large anchovy pizza. They did so because of the prevalence of restrictions that absolutely ban ALL antennas, regardless of size. The FCC only stepped in when forced to do so by Congress. And the FCC SPECIFICALLY named the USE of the antenna (broadcast TV reception) as being the deciding factor.

In other words, the exemption applies to a Channel 13 TV yagi but does NOT apply to a 220 MHz ham yagi, even though the only difference between the two antennas is that the ham yagi is slightly SMALLER.

>I live in an area with
>just that kind of restriction and do quite adequately with a flag-pole
>antenna (most neighborhoods DO permit a flag-pole with a US Flag,
>which makes a great 18' to 27' vertical)

There was a case in New Jersey over a flagpole. A WW2 veteran had family members fighting the Gulf War, and he put up a nice flagpole with the American flag on it. Raised it every morning and lowered it every night. The restrictions were enforced and he had to take it down.

>and an MFJ Super Hi-Q loop on
>the roof (about the same size as my legal DirecTV dishes and thus not
>subject to limitation)

Don't bet on it. If somebody wants to push the rules your dishes are exempted but an equal-size loop is not.

> that handles 10m-40m--according to both
>experience and printed reviews it does just as well as a typical 40m
>antenna system, and does so in a fraction of the space.

All depends what you consider a "typical" antenna system.

>I also have
>antennas on my car (which restrictions CAN'T prohibit) and a small
>2m/70cm antenna on my roof that isn't even noticeable from the street.

Doesn't matter. Hams have been forced to take down antennas that can't be seen from the street because of restrictions.

>That may not be optimum, but I didn't buy my house with the thought in
>mind of setting up an antenna farm--for that I would buy a home on
>acreage in the country.

In many cities "the country" is so far away from "the jobS" (intentional accent on the plural) that it's just not an option. One can end up spending so much time commuting that there's no time for ham radio.

What IS happening in many cases is that the older, inner-ring 'burbs have few or no restrictions - and tiny lots. The newer, "beltway" areas have the restrictions and are where people want to live. The "country" is an hour or more away.

> Frankly, ham or not, I can see some of the objections. A 40'+
>tower topped by HF beams CAN detract from the appearance of a
>neighborhood from a non-ham perspective.

That's where "reasonable" comes in. A big tower on a small lot may be unreasonable. But many of the restrictions are so fussy that even wire dipoles between trees are banned.

> The people who live there
>bought, in part, because their neighborhood DID have such
>restrictions

How do you know? Most of the people I know buy for entirely different reasons (in no particular order):

- Price
- Value
- Proximity to work/school/shopping/relatives/friends/health care/worship
- School district
- Taxes
- Crime
- Maintenance
- Style

>--why do you feel it fair to deprive them of the right to
>live where there are NOT "unsightly" antennas simply because you
>choose to move to their area? It isn't discrimination to want to live
>where the neighborhood maintains a specific appearance.

Yes, it is, if the restrictions are unreasonable and practically impossible to change.

As further consideration on this...EVEN if the councilmembers resigned,
that would NOT alleviate any personal liabilities IF such was the case.
If they did the crime or negligence, they'd have to answer for it.
Resigning
would offer no defense.

Cheers again,
Bill K2UNK

What I am talking about is the definition of "all". The definition of
"all" is very narrow and therefore my statement using "all" has a scope
that is very narrow. Sadly, you just don't understand me, Jim, and that's
a pity.

Would you wander away because it's simply too much hassle, Jim?
Neither would I. I have helped apartment dwellers install dipoles
in their attics. Chicken-wire end hats work very well. I helped a
ham in Tucson set up a vertical in his back yard ala St. Louis
Vertical style. The black SD-20 telescoping pole was virtually
invisible at night using black insulated wire.

One apartment antenna that surprised me by its performance
was a 20m quad the shape of a room. The reflector was on one
wall and the driven element was on the other wall. It out-
performed the attic dipole.

> Carl R. Stevenson - wa6vse

I never said any of the above. NCI's board, founders, leadership etc. is totally tangential to the argument. As I have noted before, I cannot justify Morse testing and never could beyond 12wpm. That a significant fraction of your membership has carried it far beyond this point is undeniable by an honest man. 1&3

Where did I say that they were fugitives from 27.255? That some of them are and those who have taken the tests rather than bitch about them most certainly are is a simple reflection of numbers and nothing more. It is pretty hard to become radioactive without some exposure to that part of the world. A lot of SSB freebanders have become some very good ops and I am proud to have elmered any number of them. But raising it at the Amateur club is not a way toward a favorable impression. 2

Morse will live or die by itself as a mode. On this we agree. In fact it will stand a better chance when we stop crippling newbies with 5wpm bad habits.

I tried to make two points:
1. The Codeless Tech, when sold as the entry to the hobby IN THE PRESENCE OF 25.5 is a fraud. It was left to the OTs to handle the fraud and people as a rule do not welcome the news that they have been fleeced. What happened is simply the predictable result of fraudulent marketing. To some extent, NCI made some promises, or at least was perceived by its clients to have made promises, it could not deliver as well but that may well have been the result of the fraud more than a furthering of it.

2. The result was running a lot of bodies thru Gettysburg with no apparent benefit to the Amateur Service or more importantly the people themselves. And unless and until we deal with some of the reasons why we will do it again. The code tests whatever else one thought of them did serve the purpose of providing a gradual introduction into the hobby by taking some time. For a Novice to pass the test and get lost is one thing, he knows from the very title that it is time to get an orientation; for someone to play some number of questions with the friendly VE who if we don't watch it is 3 months off the freeband himself and be sent off to 20 or 75 meters is not kind to the newbie; not that it is not what a goodly number want at the moment but for their long term benefit a delay to the gratification is not impossible. Much like Watsamatta U requiring freshman English of techies.

I will submit a third point: it is time for NCI and its groupies to fight the next war and give the last one a rest.

Dick N&#65533;BK

Bill,

Some resources:

http://www.ah0a.org

http://www.arrl.org

then search on "license counts" and one of the results will show current
licenses by state and license class, as well as totals.

In addition, the thread "ARS License Numbers" contains posts by me of current
totals, going back a few months.

Here's the latest totals, with the totals of May 14, 2000 (one month after
restructuring) for comparison:

These are the number of unexpired
FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of January 1, 2002:

Novice - 40,155 (decrease of 9,174)
Tech - 234,319 (increase of 28,925)
Tech Plus - 85,438 (decrease of 43,422)
General - 138,657 (increase of 25,980)
Advanced - 86,546 (decrease of 13,236)
Extra - 97,995 (increase of 19,245)
Total - 683,110 (increase of 8,318)

~6 PM, Rte 202 N near Dilworthtown Inn, on the way back from DuPont's little
greenhouse (now called Longwood Gardens). Took out a doe with a 2001 Honda
Odyssey. Game commission got the doe, body shop's got the car, I get the
deductible and the rental. And yes, it's comprehensive, not a collision.

The Russian licensing model was always admired by many.

To ensure their new amateurs were "ready for prime time",
transmitting licenses were issued only after a structured
"apprenticeship" at an organized club station. Their qualification
also included demonstrating their receiving abilities by collecting
"SWL" cards from a specified number of stations (100 IIRC)
before being issued a transmitting license.

With all kind wishes,

de Hans, K0HB

So who said that? No such argument was used to justify the FCC
opening up the initial NPRM and only an occasional commentor
used the argument in their individual comments. Nothing in the final
R&O made any claim about any need to "save ham radio."

The end result is that no one bought the argument (certainly
not the FCC) that restructuring was needed to "save ham radio."
Restructuring was strictly the result of the biennial review
the FCC decided to self impose on all services (i.e. Congress
mandated the reviews on certain specific services, not
including Part 97...and the FCC decided to do them all.)

Cheers,
Bill K2UNK

> entry level license, was done away with.

Nope, the NOVICE was NOT eliminated at all until 4/15/00. That
can be used to reflect or suggest that people were willing to
go the extra distance (Novice theory + Tech theory exams) to
become a ham rather than simply Novice (theory + 5wpm code).

> It stands to reason that, if
> you make something easy enough to obtain, some people will be attracted.

The question has been, why was it difficult. Clearly (IMHO) many
people did NOT want to go the code route at all, but they were
willing to study more theory to become a Tech than was needed to
become a Novice.

Cheers,
Bill K2UNK

NO it hasn't. There is still an HF code requirement (5 wpm in
the USA) which lingers because the international
treaty (25.5) still requires HF licensed hams to know
morse code.

> BTW, good luck w/Russia. They've already said phooey re. total
> elimination...oops, "Nyet!"

Once the ITU treaty changes, that means nothing
beyond the Russian borders.

Other than the Soviets, no other country has taken
such a "keep the code" position.

Cheers,
Bill K2UNK

Articles about "freeband DX or ... mods to get 25 to 32 MHz ...."

Oh, you mean those things which are ILLEGAL? Why do you expect such things to
be even recognized, let alone in other than a negative light?

Perhaps there's your problem....

We have and continue to "undeniably" work for the TOTAL
elimination of all code TESTING.

NOTHING in our efforts, our charter or otherwise exists
whereby we (NCI) want to end or eliminate anyone's
ability to use Morse as a ham.

The "war" isn't over until ALL code testing ends...it is
that simple.

Cheers,
Bill K2UNK

In addition to Kim's comments...
It is a barier because it is, in this day and age,
nothing but an old requirement that causes
people to spend considerable (for some) time
with no real purpose. You can disagree on that,
but that is clearly the mindset of most administrations
today and the FCC.

Cheers,
Bill K2UNK

20,000-plus newsgroups on usenet, some have flame wars and trolls that would make this newsgroup look like a Teletubby show. Yet, this is the only group in which a few people insist that you post a piece of information about yourself that can be searched to reveal your name, address, and, using that information, possibly credit card, Social Security, and telephone numbers. Can you say identity theft? I thought you could.

But the rate didn't appear to drop below the rate of
general population growth. That is the key issue...
if one is concerned about that at all. The intitial comment
was that the growth of ham radio was LESS than the growth
of the general population. Unless you map that year
by year to see individual yearly stats,
the long term numbers still contradict that.

Cheers,
Bill K2UNK

I agree, which is why I have never accepted the
claim/argument that ham radio is dying.

It is NOT only building codes. It is zoning, hours of operation,
etc. The feds have NOT pre-empted such laws simply
because the company is engaged in interstate commerce.

> Many of the other laws involve commercial operations and do not involve
> personal stuff like ham radio.

BUT the argument is/was that the states can't regulate
interstae commerce. Clearly, there are many ways
in which that does happen.

> The important thing is that it's regulation, not prohibition.

Your point?

Cheers,

You want to fight it, feel free. I think you may, however, have illustrated that the fanaticism goes a bit further up the organization than Carl at least is willing to admit.

Just what in hell does the lack of FCC pronouncement have to do with the price of beans? It does not involve code testing, it involves a decent transition after you have won your war. Nothing exists in a vacuum and the Law of Unintended Consequences is out there to bite you. When it required 20, it took some time to get there so requiring the VE to be an Extra for HF licenses guaranteed that he would have some time in the hobby and presumably not be subject to pressures to give things away. If all that happens is Element 1 being flushed, it is not only possible but almost probable that you will have exam sessions at CB keydowns in 6 months. So one of the potential by-products of winning your war is complete destruction of the VE system. Regardless of your estimate of the odds, it would seem first that this is not likely to dawn on the FCC by itself, and second that it is the responsibility of NCI to perhaps suggest that two years as an Extra be required for being a VE for the good of the service. Even the Geneva Convention requires the victors to feed the refugees.

Bill, even you could not be oblivious to the number of people even in my short span who were firmly convinced No-code would be the rule by 2000 at the latest. Self-deception, fraudulent marketing, damfino.

Dick, I see you have fit right in with the CB Band Of Hypocrites, your blaming a guy for something he didn't do here is the header of the original poster and the guy who you accuse of replying to himself. Think before you speak Dick, you have guys sticking up for you behind the scenes but if you keep this type of idiocy up I think you will loose all support from them. Since you have been labeled as head Keyclown Cheerleader. If you do reply make it understandable not a twistedhed type Rant.

Let's hold it there a second. Who are these folks, exactly?

>... for example, it's just plain rude when the pileup continues calling
>long after the DX station has already (tried to) respond to a station.

Rude is one reason, but only one. Usually, when you hear that sort of thing, those in the pile don't know that the DX station has answered someone else. On HF SSB, most stations are either talking or listening. Even though practical IVI (instantaneous voice interruption) was demonstrated by K3JH in the late 1960s.

>(I remember reading in the ARRL operator's guide many years ago
>"listen before transmitting," " be courteous," etc.)

The problem is that they can't listen WHILE transmitting.

Cool. Pretty nice when the spots are up and ya live on top of a hill, huh?

Just for the record, two months ago I worked 48 states and six Canadian provinces in 13 hours using 5 watts output from a homebuilt rig and a homebrew trap inverted V at 35 feet. And I didn't call CQ to work any of 'em.

btw, what bands/modes didja use for the above? Rig and antenna homebuilt?

> (Just to counter previous assertions that

I recall all sorts of jeremiads and jihads from you against virtually everything hams actually DO on the air. Maybe that's all in the past.

Talk about the problems of aging may seem "old" until it's somebody you care about as a friend, and haven't heard from in a while. Then it's another story.

It would be interesting to know the RF exposure from that thing at the 100W
level...

>
All true. But there's more! I don't know if they still do all of this, though.

Besides all of the above, an aspiring amateur was required to scratch build a receiver of a certain complexity, then use it to collect the required confirmations. He/she would then be required to present receiver for review, and answer any questions on its operation and construction. Only then could the would-be ham have a chance at the code and written tests.

If all requirements were met, a beginner's transmitting license would be granted. Upgrading required not only more tests but more QSLs and more involved construction projects.

Soviet/Russian hams sure aren't appliance operators.

Ya know what I want to know? What's proposed for the ham who has a spouse who says, "absolutely not" to the hobby of ham radio in their house, the yard, the garage, the car, etc.? Isn't that grounds for a divorce? When we gonna go to work on Congress for a law that stipulates that spouses and other family members *must* support the hobby of ham radio at their abode? That's what I want to know :o (This tongue-in-cheek episode brought to you as a result of conversations over coffee today...LOL)

I have ONLY illustrated that the "war" is about code
testing. Nothing I have ever stated has been anything more.

> Just what in hell does the lack of FCC pronouncement have to do with the
> price of beans? It does not involve code testing, it involves a decent
> transition after you have won your war.

No transition is needed. But for the 5wpm current test to
stay compliant with the treaty, the FCC would have (IMHO)
dropped that too. Nothing in the FCC R&O addressed any
need for any "transition".

> Nothing exists in a vacuum and
> the Law of Unintended Consequences is out there to bite you. When it

More same old/same old, doom and gloom.

> Bill, even you could not be oblivious to the number of people even in my
> short span who were firmly convinced No-code would be the rule by 2000 at
> the latest. Self-deception, fraudulent marketing, damfino.

No one in NCI ever predicted all code testing would end by 2000.
The treaty was a well recognized roadblock to that happening.
Even in NCI's filed comments we acknowledged that expectation.

Cheers,
Bill K2UNK

Egad, Bill. It sounds like an "all or nothing" demand. Perhaps it "lingers" because many want it to linger. Do you think NCI would agree to a vote by licensed amateurs to determine whether or not the 5-wpm requirement is dropped...regardless of the ITU treaty. "Power to the people?"

The "handle" here is Kim.

Moi? Certainly not. I am a fine, upstanding ham radio operator. However,
by your actions on this newsgroup and in your posts, and on the QRZ website,
I'd say you come pretty darned close to the attributes you so dislike in
some CBers, and ham radio operators.

Maybe you can improve your practices?

Depending on the type of equipment you have or are willing to get
there are plenty of places to go.

29.7 to 30 mhz is one choice. It's just above the ham band.

The other solution is to go down. The advantage of going down is that
the band tends to be open longer. You may want to look at operating
between 26 and 26.5.

Kim, I'd laugh too, but one thing happened years ago that still irritates me to this day. I found an open spot (several KHz worth of open) and called CQ with stateside phone patch traffic. Some character from Hawaii called me to tell me there was an important DX contest on and take my phone patch traffic somewhere else. I was on Guam Island, surrounded by salt water and if there was a station on frequency (there wasn't - this idiot only wanted DX) I'd have heard him. What really got me that day was that I was calling from KG6NAC - the US Naval Hospital on Guam. There were two nurses, a doctor, and a wounded vet in the shack. Yep, great impression that guy made about amateur radio.

73 from Rochester, NY
Jim AA2QA

ps - who would grease a paddle up for a lousy 30 WPM? That's only about 5 over a good straight key.

I will speak for myself (but I believe I am consistent
with the rest of the NCI board). We (NCI) will not rest
until all code testing is gone. It is that simple.

Your reference to "power to the people" is anything
but that in as much as you only want the voice
of existing hams heard.

The issue of testing or not is NOT nor should it be
a function of what already licensed hams want as
might be determined by a vote. The issue of the code
test as a requirement (or any other requirement for
a ham license) is purely a function of what should be
required as a matter of public policy
as determined in the USA through the FCC.

Cheers,
Bill K2UNK

I wouldn't either and you have a few, only a few, on me in years.

But when the war ends it is kind of nice to have a picture of what things
ought to look like. If these cats figure that virtue will be its own
reward and we will all procede arm in arm into the sunset they are dumber
than even I think they are.

Actions have consequences not all of which are forseeable. The ones you can forsee, you fix. It would be nice if NCI, et al, took some responsibility to forsee and fix. They will get it wrong: hell the framers of the Constitution would not recognize their baby by 1805 but they got enough right to make it happen. This bunch seems to believe in blowing things up far more than putting them together again.

The VE thing is only one of many. About all Carl and Bill seem to have proven is why the first act of sucessful revolutionaries is to hang the old regime and a good part of the new one. Another day in the lives of the apparatchiks.

Jim,

If you have to go back that far in time to dredge up a sob-story,
then things must be basically pretty damned good on the
ham bands.

I ran literally thousands of phone patches from KG6AQI
on Guam and *never* had such an incident happen.

I also worked tens-of-thousands of contest and DX
contacts from KG6AQI and KG6AAY on Guam and
never heard of an incident like you describe.

I also (along with two other Guam hams) flew on our own
dime to Saipan after Typhoon Carole and provided the
only communications to the world for weeks after the
typhoon, moving thousands of pieces of recovery
traffic on the amateur bands for the TTPI Commissioner
without a single incident like you describe.

And, yes Kim, I *am* beating my chest about it! Sorry
if that offends you.

with all kind wishes,

de Hans, K0HB

Absolutely, and it is their responsibility to do their best to make sure
that is all that is eliminated. It is the difference between a statesman
or even good hack politician and a third-rate bomb tosser.

Damfino. The CATV in my building is along the front of the building and
roof; guess why my coax and antenna is on the back.

Let us see, a 20-meter quad is -- guess what -- 20 meters in
circumference, actually a bit more but WTH. Now the ceilings in my place
are the usual 7'8" 2.2 meters or so, so the length was close to 8 meters.
It was?

Was this an apartment or a suite at the Waldorf??

Herein lies my error. I always assumed (silly) me that NCI wanted to eliminate the code as an obstacle to obtaining a amateur radio license. The No-code Technician license did just that...with a bunch of privies, (They are still considered privileges, correct?) I might add. The code remained solely in conjunction with more written tests as a means of "earning" more "privies." It's an interesting plight to observe, nonetheless.

>And some were victims of the actuarial tables, as they
>entered ham radio late in life after being kept out by the
>code barrier for many years (years during which many
>could have been good, productive hams ...)

With very few REAL barriers (ie: deafness, mental retardation, death...),
the only barrier keeping them out was lack of initiative.
When 5WPM code is finally gone, there will be those who start talking
about the barriers of the written exam...One excuse down, one more to go. Then
when it get's down to nothing more than $.50 and two boxtops from your favorite
breakfast cereal, there will be those who complain about the $.50.

How low is low, Carl?

>I personally know of some who felt " I thought this was going
>to be nteresting and a nice crowd of people, now I find out
>hams are a bunch of ***holes. I don't need to put up with this
>crap from idiots of this caliber ... to hell with it."

I've known people to respond that way to the local Red Cross chapter and
church socials...Why is Amateur Radio any different?

>Unfortunately, I believe we lost quite a few folks who were and
>would have continued to be good hams because of the bad
>behavior/attitude of superiority which was foisted upon them by
>some other hams (individuals, who IMNSHO, are NOT good hams).

I reitereate the above. Someone will always feel "foisted upon" by
someone. Stuff happens.

>This sort of "I'm superior, you're a piece of crap" attitude
>(inflation
>of self-importance) has no place in ham radio

And inventing such things is crap too. Ever since I "joined" this forum,
I have been LOOKING for the alleged abuses that some here say are prevalent.

With the occasional sore-loser, the likes of which you find in EVERY
avocation, it is ABSENT! If there is ANY "discord" because of the current
licensing requirements, it is directed at the FCC for "allowing" it, NOT the
persons who simply took the currently required exam.

>I've passed the
>Extra, and the reality of my professional experience is that I know
>a lot more about radio technology than many hams, but that doesn't
>make me "better" than a newbie tech ... just more experienced.

Congratulations...And I ALSO know some "newbies" who are NOT
"professionals" but are infinitely more qualfied to discuss technical matters
than many who are "professional".

>It doesn't give me, nor do other examples of experience or skill give
>anyone else, the "right" to berate, insult, and degrade other hams.

Nor does it give you any right to completely misrepresent the character of
entire segments of the Amateur Radio population, Carl.

Yeah I know you disagree and I know you think that even a 5 wpm morse test is too much. I do happen to believe that the ARS has been dumbed down. I believe it will, over the course of the next several years, be dumbed down yet again.

Of course I used my standards. Why would I attend a club meeting and use *your* standards? I have never stated that I believe codeless hams are unworthy. They do tend to be cut off from the mainstream. They do tend to latch on to one band and one mode.

> As someone else said ... "Roast no newbie before his time." I

I didn't roast anyone at that club meeting before, during or after. I stated what I observed. I did not use the name of the clubs nor did I use the names or calls of anyone there.

You can only help and guide someone who is willing to be helped and guided.

Which means "we don't care what the amateur community thinks"
>
>Your reference to "power to the people" is anything
>but that in as much as you only want the voice
>of existing hams heard.

But note that Bert wants ALL existing hams heard, code-tested or not. The code test is NOT a barrier to being a US ham - it's simply a requirement for HF/MF privileges. Yet the answer seems to be "NCI doesn't care what hams think about the issue - codetest has gotta go".

Don't expect NCI to provide one, other than "no more code tests". And maybe "no setasides for "legacy" modes".

Take a look back through this thread, or for that matter, back through rrap for 4-5 years. The only "vision" you'll see from NCI is "get rid of the code tests and everything will be rosy". If ya read Carl's posts about SS and "modern digital modes" you see a future where most of what is done today is crowded off the bands by "better mdoulations and codings".

> If these cats figure that virtue will be its own
>reward and we will all procede arm in arm into the sunset they are dumber
>than even I think they are.

Be afraid, be very afraid. Note that the proposed system batted around by Mr. Plourde and me included experience requirements that were roundly condemned by at least one NCI poobah.
>

>The VE thing is only one of many. About all Carl and Bill seem to have
>proven is why the first act of sucessful revolutionaries is to hang the
>old regime and a good part of the new one. Another day in the lives of
>the apparatchiks.

Precisely. Yet consider what has actually happened:

NCI is an "organization" of a website, some directors and maybe 2000 members. Exact numbers are not given out. Note that NCI member numbers started with #1000, not #1. Membership consists of signing up online and it's for life unless a member specifically requests to be removed. No dues or other member obligations.

When I first looked on the NCI website, there was a statement that NCI existed ONLY to eliminate code testing, and that when it was all gone the organization would simply disappear. That statement disappeared at some point, but does anybody really think NCI will continue after code testing?

FCC first tried to push a nocode ham license in 1975, then again in 1983, and finally succeeded in 1991 - long before NCI existed. FCC's opinion on code testing has been "it's only there because of the treaty" for at least a decade.

Way back in 1997 or so, there was a prediction here on rrap (I think it was by W4SCO, but I gotta check google) that the FCC was going to radically simplify the license structure. Three license classes, 5 wpm code test, a done deal. Most of us pooh-poohed it, particularly after the ARRL made its proposal and then the NPRM appeared.

Yet after the dust cleared in late 1999 the R&O EXACTLY matched everything that had been predicted 2+ years earlier.

Ever hear the expression "rooster taking credit for the dawn"?

Yup. Oddly enough, the middle axle of the trailing truck was not powered. The
axle configuration is usually given as "B-A1A" for this reason.

COOL! Of course most modern 2m handhelds will monitor RR freqs as well. QST had an article on RR radio a few years back. It was OK but they showed some safety rule violations in the pictures (like stepping on the rail).

C'mon Bill, the Novice licensee had HF access. When Novice enhancement
came into being in the late '80s, 10m SSB was added. Carl was speaking
of the *no code Tech* which offers no HF privileges.

> > It stands to reason that, if

Those folks just wanted to talk and they didn't care about HF privileges. They could call mama from the middle of the Safeway store and ask if she needed milk or bread. They've tended to stick to 2m and they've tended to stick to FM. I've not yet met a codeless Tech who is doing any experimentation (other than to reinvent the wheel). I've only met a few who have any aspirations toward obtaining HF access.

The last time I used an HF amp was around 1975 so that puts yer "brute
force" nonsense to bed. The "stomp 'em into the dust" thing on the
part of the huge collection of even modestly skilled dxers and
contesters like myself is very analogous to playing chess. It's the
BRAIN, not in the plate amps or the "instuctions" in the "books". It's
the EARS and how well ya make proper use of what they're feeding you,
getting the grip on the modus operandi of the quarry of the moment
BEFORE ya hit the button or twitch the paddles, knowing yer radio far
beyond it's catalog specs and a lotta other factors. Which is howcum
we'll be in and out of the piles with the guy logged before you'll
even know many of us were even in the neighborhood.

Morse in not a technology Sweetums, it's a mode of electric
communications which is gonna outlive you by a helluva stretch. Keep
gnashing yer teeth, yer dentist needs the money.
>
>
I assume you two cw haters did eventually catch up with the fact that
your "brilliant concept" went over like the proverbial lead balloon.
Fart in a hurricane? Lotta obvious reasons for that Mr. Anderson. One
being that in my (typical)case I already have it all and then some via
my $15/month dialup connection so I have zero incentive to switch from
my $30 USR modem to some ratty bandwidth-lame 20m modem/computer/radio
kluge I'd have to pass a radio license test to operate. What kinda
grade did you get in Marketing 101? You were asleep the whole semester
or what?
>
>
Oh, and by the way, successfully dealing with QRM is part of the lure
and challenge of real radio vs. just one more "clear channel" means of
communications for the masses like the Internet and cell phones.
>
>
>
> The proposed technology was not FHSS ...
>
>
It would be 150Khz wide and would have detrimental effects on the
users of modes who would have no interest in participating in whatever
the hell ya wanna call it. More specifically it would trash the use of
cw within that spectrum space which would just thrill you huh? Talk
about a "stomp 'em into the dust" mindset, whatta flaming hypocrite.
The proposal epitomizes your whole attitude, i.e., your lack of
respect for everyone who doesn't happen to share YOUR particular hot
buttons and "visions".

Bull, the truth is that Carl and his buddies, were either to Lazy or to Stupid to learn a Basic Operating Mode. And as far as Carl he may have even had problems memorizing a BASIC written test, it only took him a Year to upgrade. Thank God for are new Welfare Status Testing.

I can certainly respect that POV. Let me just clarify my position on
the code issue. I'm neither for nor against a no-code ticket. I
absolutely do NOT have any harsh or demeaning words for anybody who
wants to remain a NCT and enjoy 6m and higher for the duration of
their amateur radio lives. I can understand the abrasiveness of being
called a "Lifer No-code Tech," hence you'll not hear me call refer to
anybody as such. HOWEVER, having just gone through the current "rite
of passage," (...and it's perfectly ok to call it that, right?) I have
a fresh "newbie" kind of perspective that some might be missing. I'd
imagine that it'd tucker me out more battling to remove every last
shred of a code requirement in AR than to just sit down (...or
encourage someone else to) and spend 15 to 20 minutes every other day
or so and listen to a few dits and dahs. There's no time limit. I
imposed a time constraint upon myself, but that's nothing required.

> My opinion is that for a mode I don't personally like to use myself, I have
> no desire to learn it--it wastes my valuable time. But, for the Tech+
> license I was *willing* to learn it at 5wpm.

Perhaps this is what's it's all about? A "willingness" to fulfill the
requirements to "earn" additional privileges.

> I used it once the night I
> passed to placate an "overzealous" friend who wanted to see me use it on the
> air, and have never used it since--have no intention of ever using it

> I've never wasted my time learning things about ham radio that, say, an
> experimenter might learn--because I am not an experimenter.

Duly noted and once again, POV respected. I personally want my key to eventually "beg for mercy" when I use it...but that's just me. My wife just shook her head when the three new sets of ARRL 'Increasing Your Code Speed' CD's arrived this weekend. (The "I married a nerd" syndrome.) While I can respect the inclusion of a No-code ticket, the cry for it's total elimination is a touch extreme. It's hard for me to put it in a politically correct context...it's just kinda "feels" like asking for a "free ride." If there were no access to AR without knowing the code, (Speed issue set aside.) that'd be one thing. But to say it's a "barrier," please. An amateur radio license is a privilege, not a right. Rights are gauranteed, privileges are earned. I've never used plenty of stuff that I've learned in school. I'll bet you have too. I sat through three calculus courses, never had to differentiate in my life...for pay or pleasure. But I sure am glad it was part of my overall "formal" education and you'd better believe it was required. Do I think we'll ever actually "NEED" the code. IMHO, we've got folks in harms way right now who might have a need for it? I know that if I was trapped in an elevator or an "air pocket" in the WTC rubble on 9/11 and I banged out .- .-.. .. ...- . ...-.. .--., I'd pray that my guardian angel was a "coded" ham before filling his/her current position. Do we still need it...I dunno?

> While it goes against the angst of some hams, I am one of those dreaded

I was always a bit of a "techno-nerd." I'm easy either way. I'd just as soon see folks enjoy AR for what they glean from it.

> But, if pressed, i.e., in a severe or disaster situation, I would operate as

Entirely cool! I happen to catch part of the movie 'Contact' last
night and there's a line where Jodie Foster's character is given a
cyanide pill "just in case." When asked "why," the commander's
response seems to fit this discussion to a tee. "There are lots of
reasons we can think of for having this with you, <cyanide pill> but
most of all...it's for the reasons we CAN'T think of. Kim, I respect
and admire your approach toward the disaster/emergency service aspect
of AR...but I sure hope a Tech+ or above responds when I bang out that
short message above when my voice is lost due to smoke inhalation
and/or screaming in terror. (We all know what happened to the local
cell-phone service during the moments immediately following the second
strike to the WTC, right? It went the way of the 13 and 20-wpm
testing.

We all hear stories, Kim. All you need to do is develop an ability to
separate the true stories from the fictional accounts. There's an old
saw which goes, "If it sounds too good to be true, it probably is".

Hans, to be honest, that was the ONLY time that ever happened. The timing was just so stinking LOUSY. I've run tons of phone patches from KG6AAY myself (I was stationed at the receiver site, working in crypto). We did have a typhoon wipe out the coast guard tower on Rota and sent a chief over there. When the guys at the receiver kept telling him he was 'loud, but garbbled', likely due to having the rf gain all the way to the right, we gave the chief a shout ('sparkplug one, sparkplug, this is KG6AAY'). Captain Delany showed up at the shack after we were asked to pass all traffic to ComNavMar direct - and 3 of us were secured from all other duties untill he directed otherwise. There are, of course, a zillion facets to amateur radio, none of which represents exactly what amateur radio is all about. Myself, I enjoyed CW a lot - even giving at least one novice his first overseas contact (a WN2 out of New Jersey). I used to rag chew a lot on RTTY - especially with Norm, VK2NP, for hours on end. What year were you stationed on Guam?

Thanks Jim, with so much damned negativity, I like to see some positivity once in a while.

Ryan KC8PMX

My goals?

Pass the Code Test.

Explore a new band, (most likely 6 meters due to costs)

Bring at least 2-3 new hams into our ranks. Also working on selling our clubs ham radio classes to the law enforcement, fire departments, and EMS communities. With the nature of these people, they are perfect candidates to add to our ranks. The county fire training officer here where I live is a AWESOME supporter of amateur radio, and the thing we can do. I will definitely be utilizing him. This effort may get more than 2-3 hopefully.

Finish my "fire station project" (Goal is to get all of the volunteer fire departments set up with a 2m/7cm transciever to create one hell of a backup system for when a real disaster comes. This way ARES members can work from the fire station that is closest to them.

Get my step-brother back into the ham bands. He was licensed almost 20 years ago, let his license lapse and now is interested again once he found out I am licensed. He travels as a "missionary" as I understand it, as a doctor providing medical care in some interesting countries. Talk about some DXepiditions! Got him the text he needs to refresh his memory and hopefully get him to a testing session with the next 30-60 days!

I am pursuing a ton of training related to the fire department I am with, so my time is extremely limited until June, otherwise I would have more to add to my list, but need to be realistic.

I will keep those that care informed of my progress!

Ok Bill, I cheerfully disagree:

As I pointed out to Kim, I come to the table as a relatively
"unspoiled" newbie. I've had neither the time in nor the exposure to
be "jaded" one way or the other re. this issue. Having just passed
element 1 and from a relatively "unbiased" POV, I have a hard time
equating 5-wpm for "additional" privies with a "barrier." I seem to
remember studying for (and answering) questions on space station and
EME contacts. Honestly, I don't plan on ever utilizing either of these
skills. Should they be stricken from the writtens? Are not the
writtens challenging to the point on causing "people to spend
considerable (for some) time with no real purpose" wrt some of the
questions? Why not just eliminate all testing as it's really kind of

open to interpretation as to what's "purposeful" and what's not? Do we really want to leave it to "most of the administrations and the FCC" to decide that for us. Sorta smacks of "my big brother says I'm right...so there!" C'mon, let's put it to the vote. A vote every five years polling all US licensed amateurs re. whether or not to retain element 1. After all, is it not OUR hobby/service to shape? Are we not a microcosm of society as a whole? "By the people, for the people, and OF the people?" Where's the "faith?" Let me be frank, (but call me Bert) 5-wpm's not a "barrier." It's an inconvenience, particularly if you don't plan on using CW. For me, it's the starting line. It's far easier to cross the starting line rather than try to paint it over and argue that it shouldn't have been there in the first place. Just MHO. :-)

I have no problem with Kim ... I don't know her personally,
but from the small bit I've read, she and I seem to agree
that "bad attitudes" (the "I'm superior and you're dirt" sort
of thing based on "stomp 'em into the dust, 'big gun' mentalities,"
"I can beep fast and you can't," etc. are counterproductive
to amateur radio ...

Kim (or anyone else, for that matter) and I don't have to agree
on everything to get along and show some mutual respect.

What I have a problem with are blowhards who insist that
there is no place in amateur radio for anyone who isn't
a clone of them ... and that such people are dirt.

While I've stated that I think some attitudes are bad for
ham radio, I recognize that those people are entitled to
hold their views, regardless of whether I agree with them
or not ... I may state that *I* think their attitudes are bad
for ham radio, but I don't equate the holder of the attitude
with dirt because of their view.

Yes.

To some people it is a barrier in the sense that
they simply don't have the physical/aural ability.

To others it is a barrier in the sense that it is so
disinteresting, distasteful, or irrelevant that they
are unwilling to endure the "jumping through the
hoop," despite the fact that they are in other ways
completely qualified and would make good hams.

No ... for access to the bands below 30 MHz, Morse
proficiency is still required.

I fly regularly. I always carry a handheld with me in my laptop case. I
also carry a cell phone. I have been asked to turn on my computer, open
my cell phone, but never been questioned about my ham radio.

What is the problem, you carry your ham license with you. You have ID
stating it is legal for you to use the radio.

>
> Let's hold it there a second. Who are these folks, exactly?

I don't have a list of callsigns ... I tend to avoid such folks
rather than gravitate towards them ... it's the "type" and
the behavior that I'm talking about, not focusing on specific
individuals.

> >... for example, it's just plain rude when the pileup continues
calling

station.
>
> Rude is one reason, but only one. Usually, when you hear that sort
of thing,
> those in the pile don't know that the DX station has answered
someone else. On
> HF SSB, most stations are either talking or listening.

That's EXACTLY the problem ... too much calling (trying to "drown
out everyone else") and not enough listening ... I frequently hear
some twit sending his call over and over and over without even
listening, long after the DX station has (at least tried to) answered
someone else ... if there was a bit less outright aggression, things
would work better for everyone ... including the DX station.

> >(I remember reading in the ARRL operator's guide many years ago
> >"listen before transmitting," " be courteous," etc.)
>

> >dipole at 20 feet or a ground mounted trap vertical ... all without
> >EVER calling "CQ" ONCE.
>
> Cool. Pretty nice when the spots are up and ya live on top of a
hill, huh?

I tune around and LISTEN ... in many instances, I was apparently
the first to notice a station calling ... in other cases, I throw my
call
out when the station I'm trying to contact ends a contact and says
"QRZ?," then wait to see if he heard me ... I don't keep repeating
my callsign over and over for 60 seconds ...

> Just for the record, two months ago I worked 48 states and six
Canadian
> provinces in 13 hours using 5 watts output from a homebuilt rig and
a homebrew
> trap inverted V at 35 feet. And I didn't call CQ to work any of 'em.

Good work ...

> btw, what bands/modes didja use for the above?

80m-6m ... lots on 10m ... yesterday worked Vancouver Is., BC on 6m
from my E. PA location ...

>Rig and antenna homebuilt?

Using commercial gear I've had for a while ... my design/building
is not aimed at the "conventional" modes ...

> > (Just to counter previous assertions that
> >the first thing I'd do upon upgrading would be to start "shouting
CQ
> >DX" :-) I'm sure that some will criticize me for having a bit of
fun
> >with my new privileges ... tough.
>
> Considering your comments about "electronic paintball wars" and such
in the
> past, it's kinda surreal to see you counting countries, Carl. ;-)

It's more a curiosity/casual amusement than a passion ... I'm not in
a huge rush to gather paper or rack up awards ... just playing around
a bit in my spare time. I never said I wouldn't use conventional
modes
or have some fun ... just that my major interest is in new technology
(which I'm working on at my own pace as I get my lab organized
in the new house ...)

> Waddya think about eQSLs? Should they be accepted for award credit?

PERSONALLY, I think so ... having looked at the measures that
eQSL is taking (registration process, logon with password, and

sending a scanned copy of license for verification), I think it's secure enough to reasonable insure the integrity of the process.

I also see significant benefit to the ham community in terms of cost savings through the use of such technology as an alternative to the expense of mailing conventional QSL cards via conventional postal means.

I personally don't care if people are still beeping (or not) long
after I'm gone ... as long as they do it by choice rather than
being forced to do it against their will in order to obtain totally
unrelated privs that they're otherwise fully qualified for ...
> >
> I assume you two cw haters did eventually catch up with the fact
that
> your "brilliant concept" went over like the proverbial lead balloon.

The major objections were that it wasn't a purely manual skill.
Also, it was objected that something that worked well with
no QRM/QRN/QSB would "take the fun out of it." (To which
I responded that it would be easy to program all kinds of
hellish channel impairments ... in the receiver ... without having
to trash the underlying communications channel.) I even pointed
out that this could be a "feature" for contesters, wherein the
paying field would be leveled in terms of impariments and the
result would truly be a matter of skill, rather that "who can afford
the biggest amp/tower/etc."

[snip]

> respect for everyone who doesn't happen to share YOUR particular hot
> buttons and "visions".

You are mistaken ... the modulation schemes proposed would NOT
be 150 kHz wide ... in fact, they would be narrower (by a lot) than
the required bw of the 20 wpm Morse-equivalent they were designed
to replace. What WAS said was that, within the same 150 kHz of
bandwidth (14.000-14.150), 10s of thousands of simultaneous
20 wpm Morse-equivalent QSOs could exist with little or no mutual
interference ... the system would not "trash the use of cw within that
spectrum space" ... it could easily detect and avoid frequencies where
cw QSOs were ongoing ...

The point is that the TAPR approach is not cost-effective and
will result in a "product" which will cost much more than necessary

to achieve a reasonable result ... thus discouraging widespread
adoption.

> > with little practical benefit and a lack of adoption by few
> > other than the TAPR development team.
> >

The 900 MHz band could be very useful .. and nobody is talking
about a "cellphone type infrastructure." (at least I'm not ...)

You disagree that "always" has a very narrow definition. Exactly
how can "always" deviate from "at all times"?

I rest my case, Dick. You just proved that the FCC should be making
amateur radio policy rather than the amateurs themselves.

Can you cite an occasion (by log entry) when you were actually forced by
the government to operate CW?

But deviation must be restricted to fit into available bandwidth and the
receiver bandpass. :-)

Clarifying for Cecil, the statement "My statements are always narrow
even if I don't specifically say they are narrow", is a pretty 'big' lie
- whether it happens to be narrow or not.

> Well, spark gap was crowded off the bands by better methods.

Nope, not true.

Spark and arc transmissions were NOT "crowded off the bands". They
were simply abandoned by amateurs who began to use the new "undamped"
mode called "CW". By the time "damped waves" were no longer allowed
for amateurs, there weren't any amateurs still using them.

> There
> seems little doubt that technological progress will continue.

The question is whether existing modes are forced off the air. Shall
we talk about bandwidth limitations?

These folks have my complete sympathy. We really need an equitable
alternative for the few of them in existence--those who are interested
in obtaining an amateur license and who have such disabilities.

> To others it is a barrier in the sense that it is so

> >
> That's EXACTLY the problem ...

I don't think you understand.

If some ops get "out of sync" with the DX station, they are listening
at the wrong times. They don't hear the DX station calling somebody
else so they keep on calling.

> too much calling (trying to "drown
> out everyone else") and not enough listening ...

That's what you presume is happening. Very, very few have the power or
antennas to drown out everyone else.

> I frequently hear
> some twit sending his call over and over and over without even
> listening, long after the DX station has (at least tried to) answered
> someone else ... if there was a bit less outright aggression, things
> would work better for everyone ... including the DX station.

You presume "aggression" when what is usually going on is lack of what
pilots call "situational awareness". Remember that because of skip
zone, what YOU hear may be very different from what the DX or the
other stations in the pile hear.
>
> > >(I remember reading in the ARRL operator's guide many years ago

There IS a mode where it's possible to "listen while in transmitting
mode", though.

I do recall a post or two where you had some critical words for
"appliance operators"...

Then again, most race car drivers don't build their own cars, and few
marathon runners sew their own shoes.

It's still surreal that you know the exact number of countries, states
and provinces, but don't mention the mode used.

Well, there's something we can agree on. While I prefer an actual card from the actual amateur, in practice the cost of postage alone can become a significant burden. If you want nice picture cards, the cost of cards plus envelopes and postage both ways gets up there right quick. Add to this the percentage of folks who don't QSL or QSL slowly and eQSL starts looking REAL good.

Funny you should mention that, Cecil. I was on 2mtr FM a while back and heard an operator use a lot of ten-codes on the air. When I mentioned (politely) that plain language is preferred by Hams, he not-so-politely told me that since we both had Ham licenses, he could talk any way he wanted "good buddy".

However, when I'm on say, 14.012, I just don't ever recall that kinda attitude. Imagine that?

Oh, don't pay too much attention to Carl, Bert, he has always been one of the big "jumping through hoops" types. Can't see the forest for all those danged trees. Has no clue beyond his own narrow interests, and no use for anyone who doesn't consder his view of ham radio as "proper". Most NCI types could have easily learned the code and passed the tests as you and I did, but..... well, the fact that they didn't speaks for itself..

Which brings up a point. N2EY still owes me a card, as I noticed just finishing up my QSL'ing cycle for CW SS weekend. He'll soon owe me a second one.

I played with one of the eQSL sites awhile back, and decided that eQSLs are impersonal, border on rude, and have no place among real hams. It kind of boils down to "what's the point?". I'm not suggesting everyone wants to send QSLs, but if you do, why would you send an eQSL? It's impersonal, has no value, requires some hassle to "put in the shoebox" at the recipient, and is unwelcome clutter in my email.

A paper QSL, even a very nice one, is cheap (mine cost less than a quarter, and they are very deluxe -- you can design and print your own on your computer if you wish). A paper QSL can reflect your personality, your creative ability, or your personal interests. It is the tangible token of our intangible electronic communication encounter. If it's too expensive for you, then don't do it, but please keep you electronic cards at home.

With all kind wishes,

de Hans, K0HB

Arnie, Cecil knows, he's about as dumb as a fox, but he likes to be a contrarian. The Good Buddies have been gathering here for a long time,largely in the form of no-code techs but some have gone to Extra. I knew one who decided he liked it better as a freebander and abandoned ham radio.

> this?

Oh, there's several ways...

1) If CW is "distasteful" to someone, that person should stay as far away from the HF bands as possible! Maybe they should retreat to the VHF bands where the noxious dah-dits are in thin 100kHz slivers far, far away from the repeater frequencies. Or at least keep a barf bag handy for those excursions to the low ends of the bands.

2) Try to read "To others it is a barrier in the sense that it is so disinteresting, distasteful, or irrelevant that they are unwilling to endure the *35 question General exam*, despite the fact that they are in other ways completely qualified and would make good hams" with a straight face.

3) Point out that the membership of FISTS (paying $15 a year, no less, with a published membership list) is around *twice* the size of the membership of NCI (who pay no dues, have no public list of members, and may not even represent the current active membership).

Both those statement were questions. The lack of a "?" on the first
one is a typo. It should have read, "You disagree that 'always' has
a very narrow definition?" I didn't tell you what you disagree with -
I just asked a question.

You might try busting in on a DX QSO sometime with the suggestion that
one of the stations should clean up his signal, just to see how well
that goes over.
I've heard some of the RACES guys using a lot of 10 codes during an
activation. I don't really think they should, but what I think doesn't
really matter when they are conducting their business.

It's not possible. Therefore the FCC will do as they please. If hams
like you would only honor "The Amateur's Code", the problem would
go away. Why is so difficult for you guys to have "consideration for
the interests of others"?

Not the kind the ARRL VE's give. CW operation is not required for the
test. Don't know about any of the others.
```

No, I think that there's a lot of CW operation on the HF bands. If people get nauseous or are personally offended by the mode, they shouldn't put themselves in a position where they'd be likely to have to deal with it.

...or maybe it was just a flip response to a questionable comment. You decide.

1. take my test and get my tech (doing that the first saturday in Feb)
2. become familiar enough with code to go for at least my general ticket
3. build a QRP rig
4. build up a nice shack in the outbuilding behind the house
5. with 1.5 acres of land and no stinking building restrictions, I have
plenty of room to string some wires, and put up a tower or two.
6. attend a few hamfests to dig around for some good rigs
7. do some travelling that is NOT disaster related, maybe to meet some of
the more influential people I have had interesting discussions with in these
forums
8. settle down maybe find myself a woman thats crazy enough to have me
heheheh.

How about, it's not good amateur practice, and it VIOLATES amateur rules Part 97.113(a)(4) (you may not hide the meaning of your communications by putting them into codes or ciphers). As I recall, it was discussed (10 codes) in several of my licensing manuals from Gordon West. And of course, we all know what a sphincter Gordon West is, right? But then again, you LIKE to bend the rules, don't you Cecil. How about "Live and let live by the rules" They may have reduced the rules about code speed and test questions, but that code and cipher thingy is still in there.

It's not so much what you or I think, Jim, but what the FCC thinks. ARES,
RACES, FEMA, it doesn't matter. They should NOT be using ten codes, and
they know it.

That's a pretty tough sell, Arnie. Ten codes, like Q codes, are not prohibited by Part 97. They go against amateur tradition, and might be considered by some to be poor amateur practice, but that's about the extent of it. You might check to see what Riley has to say about it. Cringe and bear it?

What'd ya think of my idea about busting in on a dx qso to let the guy know he has a bad cw note? ;-)

You know - from that nice brick, ranch-style house just east of Gibbs Avenue, and within walking distance of "Historic Ridgewood". You moved to Lousiana, and admitted IN THIS NEWSGROUP that you were active on six meters. QRZ still showed you at a QTH which had a "for sale" sign in front of it, sitting empty for nearly a year.

All these snivelling, drooling, knuckle-dragging, slack-jawed,
miserable people of the blue color are taking the ARS one step
closer to extinction.

BTW -- what is the complimentary color of blue?

What about the "Q" codes, I have been a licensed amateur since the late 70s
and it seems that they have always been an integral part of Ham radio.
Really what's the difference between them and the "10" codes? BTW, I am
also a Fl State Trooper and we use the "10" codes as opposed to the other
local police departments that use the "Q" codes and other signal codes. I
also think that there is an exception for commonly used codes such as the
"10" or "Q" codes in part 97 since they are well-known and not really trying
to hide the meaning of the communication.

Hans, you misunderstand me. I have no problem with people being extremely proud of *themselves* for their accomplishments. You sound like the kind of guy who would have done such a grand thing whether there was an audience or not.

'Tis the grandstanders (those looking for replenishment from the masses) who really bother me--they generally demand that you know exactly what they do/did and how dare you have any contrary attitude about it, you better respect them for it (even if the feat means not a thing to you). I am one of those "I am real happy for you" people--but don't look for me to gain respect or admiration for you [the figurative you--not *you*] if you're out there looking over your shoulder seeing if anyone noticed...I probably didn't: deliberately.

Q codes are *universally* (part 97's word not mine) accepted -- worldwide --
and are not prohibited by part 97 because of that. 10 codes vary *widely*
from state to state and even county to county and city to city. They are
not universally accepted and were designed for use by a very small group of
professionals and I doubt they are known to 90% of persons outside of this
group. If Riley has endorsed their use, he has mis-read the intent of part
97. Send a 10 code to an amateur in Russia and see how universally accepted
they are.

Me neither, really. Although, if there was *really* something that could be
done to make everyone happy (like that's ever going to happen) I would hope
that it was not CW related. But, there's not...so it doesn't bother me one
way or the other.

IMNSHO, people who get upset are as likely to act like those doing the
"namecalling." Think about it. I've never been upset at all by the name
"dumbed down" Tech, or whatever other acronym that can be brought up. I
don't "wear" the things people try to throw my way--I know me better than
that.

>
> HOWEVER, having just gone through the current "rite

>

Oh, you and I are right on line with that one. Definitely. I think that's what I mean *most* when I say I don't really care one way or the other--I certainly am not motivated enough either way to fight any battle over it. And, that's been exactly my response to people who whine about it--get over it and do what is required to get the license; or don't.

> requirements to "earn" additional privileges.
>

Yeah, but my position on that "willingness" to learn extends out to be more than willing to learn something I will actually use. See? If they wanted to come up with some way to have a "lab" test (that's what I really think CW is, just a "lab" test), then come up with something *other* than mode testing. *OR*, give the applicants a choice of 2-3 different mode tests and let them decide which they'd rather study for. How 'bout put a packet station together; give a scenario for installation, you know: a pickup truck with no good area for ground, limited antenna mount surface, etc.; stuff like that.

CW tones have a strange effect on me. I admire a good fist and love to watch CW being done. However, both when I was studying and whenever I try to watch for any length of time, I literally get very depressed, angry, and anxious. "We" (friends and I) could never put a finger on that until I got to listening one day to a new ham on frequency and he had a very, very monotonous tone to his voice--never changing tone, etc.--and it would be within a few moments and I'd be in the same mental state...so we think it is the monotony of the tone that gets to me. I also cannot *STAND* heavy metal guitar wailing for more than a minute or, preferrably, less.

>
> (The "I married a nerd"
> syndrome.)
>

Hey, if you think your wife would see the humor, tell her I created one. I am a computer geek and turned my very non-technical husband on to computers when we met. He is over there designing his next computer that he will be building (currently has a self-built AMD Athalon 800, with a Creative Anhialator II GTS video card, Soundblaster Live X-gamer, blah, blah, blah). *I* don't even build my own...LOL Then, very shortly after turning him on to computers, I got the bug to get a ham ticket and talked him into it. He knows way, way more than I ever cared to about radio...heh heh heh. Yep, I created a monster.

>

I never sat through calculus, but used to be in the environmental industry (started out as an Abatement Inspector during the asbestos hey-day); went on to PCM (Phase Contrast Microscopy) and could do PLM (Polarized Light Microscsopy)--though I was never certified in PLM. I am certified in PCM. Hated, hated, hated it...way too much standard deviation stuff...LOL

>

Hmmmm, please don't take this as contraire, just something to offer in the
way of a challenge. There is no way that you can guarantee someone will be
around who knows CW. No more than you can guarantee that there will be
someone around who knows Spanish, Greek, French, has a way to communicate
with the deaf, etc. See where I am going? In a disaster, simply pounding
will get attention, simply yelling will get attention, and both those modes
are more likely to be *clearly* understood (save from a deaf person, who
would never hear a thing).

Conversely, it would be just as appropriate for you to learn every and any
language you possibly can to attain *fuller* guarantee of having assurance
that *someone* will understand you need help. I think just banging and
yelling will give you far more time to learn other things...like maybe CPR
that might help you help someone in a time of need. *HOWEVER* :) if you
enjoy the mode, any mode, why not?

>

Hey, you never answered the "Know why?" above. It's my theory--completely unexplained--that when you *first* key up your radio outputs the most power. As a few seconds go on the initial draw becomes a lower and constant output. In times of severe operating situations, short two or three word outputs at a time are often more successful than keying up your radio and talking for longer than a few seconds. Remember that, in case you ever need it. It's especially effective in severe weather (lightning burst) conditions. Also, if you're communicating through repeaters...and don't ask me to figure this one out either, it just works...if you've got a really bad signal, key up on the tail end of someone who has a good signal into the repeater, you're signal will be better. Once again, only works for a few seconds at a time. This is where teamwork comes in: if these ideas are discussed as methods, someone will know what you are trying to do and will "put the word out" for people to key up the repeater for you and let you get in at the very end. Don't ask me why it works...have no idea.

One other thing, since you seemed to have a listening ear for this kind of thing. How 'bout the person who has a nice, tall tower in the middle of a county? Eh? Most mobile stations during bad weather can't get to the repeater. Eh? So, the ham with the nice tall tower in the middle of a county puts the fixed station in crossband repeat mode, to a 440 repeater easily held, down to a 2M repeater easily held. Eh? Voila...may not be a "repeater" but works darned nice... Most mobile stations in my county can hit my dual-band antenna on simplex; and my dual band antenna hits a great coverage repeater with assurance every time (we've got a not-so-reliable repeater, so crossband to a great one in Dallas works great--everyone can hear it, but not everyone can hit it). Another thing to be played with is having "fixed mobile" stations (those with excellent operating conditions when mobile) be "fixed" throughout the county and, guess what, be crossband repeating (even on different frequencies for different operations).

Hey... Kim...

That was the title of Linda Ellerbee's book back in 1986. That was the phrase she used at the end of her broadcasts. The book was great... she's definitely my favorite TV Journalist. If I remember correctly... she was Texan... right???

Hmmmm, when I first read that I had no idea who you were talking about. Then, I remembered the name Linda Ellerbee and I know I've heard her. Was it...NPR? Heck, can't remember. Anyway, if I've picked that up having heard it from her, I can't remember. I *do* remember the phrase "watch was you wish for because you just might get it." And, now, I can't remember who said that (female on NPR, but I think locally here in Dallas).

...and if you put your radio under a pyramid at night, it will probably
put out even MORE power. Stroking your microphone with a chunk of
quartz crystal will improve frequency stability. A rabbit's foot buried
at the base of an apartment dwellers antennas can impart magical
increases in gain.

Q-signals are codes, Arnie. Published codes do not violate amateur
rules. 10-4 means approximately the same thing as QSL.

Depends; I'm pretty sure we're all referring to the 'freeband' here,
which keeps on taking up more and more of 10M.

If you want to know what band yellow actually is, it's something near
570nm, which should be entirely within our 'all above 30GHz'
allocation.

FWIW, the blue band is roughly 475nm.

What does 10-10 mean, 10-95, 10-0, 10-18? Go to different parts of the country and you'll get different answers. In some jurisdictions, go to different police departments and you'll get different answers. The problem is obvious. During an emergency, I could theoretically send a 10 code that tells you I am in serious trouble and need help immediately (according to your "published" chart), when in fact the 10 code *I* am using means prepare to make written copy. Use a 10 code when talking to a Russian Ham and see what kind of response you get. Q- signals are universally accepted (standardized) -- worldwide -- Read part 97 concerning "universally" accepted codes and ciphers, then get back to me.

There are three elements to Morse encoding, Cecil. The dit, the dah and the space. The length of the space determines element separation, character separation and word separation.

Somewhere around here I have a list of the ten codes that I got from
the Texas Highway Patrol whose I45 frequencies I monitor.

Q-signals are NOT "universally" accepted. They are accepted by less
than one percent of the population on only one planet out of billions
in the universe.

The 10-codes would be illegal *ONLY* if the purpose of using them is to
obscure the meaning of the transmission. The Q-codes would be illegal
if they were scrambled so the purpose was to obscure the meaning of
the transmission. That 10-codes may not be understood by some receiver
is the receiver's problem akin to not understanding a foreign language.

When we talk about states of a modulation method, we are not talking
about coded elements. There are only two modulation states involved with
Morse/CW/OOK. The OOK part says it all - ON/OFF. FSK also has two states.

In any case, the Morse code 'dah' and 'space' timings are specified
with respect to the basic 'dit' time.

If he had politely said that he could use the '10 codes' because both of
you had your licenses, would that have made a difference?

I hear 10 codes being used around here on 2m from the "I want to be
an emergency ham" types all the time. I don't really like hearing it but I
understand the ones doing it are also fire, police, and emergency management
members who are ALSO ham operators, and just getting their 'lingo' a little
mixed up. I've also used a Q code on the public safety frequencies and
the world didn't come to an end ! :)

> However, when I'm on say, 14.012, I just don't ever recall that kinda
> attitude. Imagine that?

Could it be that the operators on 14.012 have been doing it a little longer
and are more experenced and make fewer mistakes?

But I agree with you in that your 10 code buddy should have been a lot
more polite in his response to you. We ALL need to work on that thing
called "Common Courtsy"

OK now, if yellow band is freebanding and blue band is ARS, does
that make sunlight "Broadband"? Or is it all of the light that the FLC
(Federal Light Commission) controls?
Inquiring minds want to know!

KT4ST mashed his "send" button :

> Read part 97 concerning "universally" accepted codes and
> ciphers, then get back to me.

OK, I did that, and now I'm back to you. I looked for "universally"
and "universal" -- the words are not mentioned.

What *is* mentioned is "intended to obscure the meaning".
Since 10-codes are not sent with intent of obscure, then I'm
sure FCC will not mind me using them.

And oh, by the way, Q-codes on voice are also perfectly
acceptable at my house.

With all kind wishes for 2K.002,

Actually, both of them are tri-state. The case of FSK is mark, space, and
nothing. With OOK, it is on, off by intention, and gone. The OOK
situation requires wetware to discern the diff which is why FSK was
invented to begin with; compooters, even ones that clank, have a hell of a
time with the ambiguity of OOK.

How do you know? It was once almost a given that many Technician tests were given by proctors with a *wink,nudge* "waiver" of the 5wpm code test, since no tech would ever use CW (above 50 mHz), and it was often the case that they, once exposed to the hobby,would get interested in HF, and thus would learn the code to pass tests which gave them HF access, if he was interested enough, and if not, well he'd never need to know it for VHF (in those times) It was viewed by some as a way to "get the numbers up" and initiate hams to the hobby. I personally didn't agree, but I know that many who gave proctored Tech exams did.
I know that Carl has made statements of his testing history, but Carl has made a lot of erroneous statements, so we'll just leave it at that. Maybe he once learned code to 5wpm and maybe he didn't.

Wow! Are you really that uninformed? No wonder you couldn't pass the Extra till the requirements dropped!

You can be sure that any Russian or Japanese who ham who hears a Q signal will, if he is better informed than you, recognize the meaning. It is highly unlikely that he ever heard of a 10 code, and if he had, he would have no way to know which or who's version he was hearing. Thus he could not know the meaning. That's what universal means. Universal among ham radio operators.

The FCC, when making rules for ham radio operators, isn't all that concerned about the knowledge level of the other 99.9% of the world's population.

Any man who works hard to learn someting and finds himself
no wiser than before is a dum$hit. At the least he should have
learned that sometimes you can work your a$$ off for little gain.

His "murderous resentment" is an artifact of his original stupidity which
he has not improved upon.

Uhhhhhh Dick, If what you say were true, NO language could be used
on the ham bands because there is some ham in the world who doesn't
understand it. Plus Q-signals are not even universal within ham radio.
Plus SS97.113 doesn't say anything about "universal". Therefore, your
entire point is moot. No one would use 10-codes on someone who didn't
understand them anymore than someone would use Swahili on someone
who didn't understand it.

10-codes are perfectly legal on ham radio as long as the intent is
not for the purpose of obscuring the meaning of the transmission.
If I said I was using the Texas Highway Patrol published 10-codes,
then it would be perfectly legal for me to use them. Contrary to
what you believe, 10-codes are not "obscene, indecent, or profane".
In fact, I think it's high time the ARRL published a list of 10-codes
to be used by amateurs on SSB instead of those funky Q-codes not
designed for voice communications.

Dick, please quote the sub-section of Part 97 that requires codes to
be "universal". And Q-codes are NOT universal within ham radio by
a long shot. After 52 years as a ham, I don't use them and only know
four of five of them.

OK Dick, your technical expertise is obviously far above mine. Exactly
what is the third state in an ON/OFF configuration? Note that coding
is an entirely different issue from the possible keying states. ASCII
could use ON/OFF keying but it is usually uses FSK which is also a
two-state method.

A tristate level might be, for instance, OFF/half-power/full-power.
That is possible, but I haven't seen it applied to CW. What would
be the function of that third state?

From The ARRL's FCC Rule Book, 12th Edition:

"You may not hide the meaning of your communications by putting them into codes or ciphers [97.113(a)(4)]. There are certain exceptions, however. In this context, codes and ciphers refer to text that has been transformed to conceal its meaning. This restriction is consistent with the Commision's obligation, under international regulations, to ensure that amateur communications be made in plain language. Universally accepted abbreviations may be used, however, when the intention is not to hide the meaning of the transmission; common Q signals, for example."

Nowhere in [97.113(a)(4)] is "universal" mentioned. What you have quoted
is just some ARRL employee's opinion of what 97.113 says. So I ask you
again. Please quote the sub-section of Part 97 that says codes have to
be "universal".

Nice quotation, but who cares what an ARRL publication says? It's a
nice book, published by a nice radio club in Newington, but has absolutely
no official standing.

The FCC rules do NOT require "universally accepted abbreviations".
They only require that you do not intend to obscure the meaning.
10-codes are completely legal within [97.113(a)(4)].

Good luck on this one now!

Sorry, Cecil, but 10-4 means "understood." QSL means "acknowledge a
contact." I think you mean QSO, which means "understood."

I'd be in favor of hams adopting the expressive old Navy "Falcon
Codes". Below are a few excerpts.

100 Congratulations. You f*cked up.
101 You've gotta be shitting me.
102 Get off my f*cking back.
103 Congratulations. You f*cked up again.
104 Your signal so f*cking bad, I can't believe it.
105 I hate this f*cking place.
106 Beats the shit out of me.
107 f*ck you very much.
114 I feel like I've been f*cked and thrown in the woods.
123 Go pound sand.
142 Read the f*cking manual.
169 You have me confused with someone who gives a shit.

With all kind wishes,

Again, from The ARRL's FCC Rule Book, 12th Edition:

"RULE INTERPRETATIONS

The purpose of this book is to provide you with a complete set of the rules and a commentary on them to help amateurs apply the rules in specific situations. The chapters that follow provide time-tested and FCC-APPROVED INTERPRETATIONS [emphasis mine], and copies of FCC letters and news releases describe the application of the rules."

So, it's not just some guy at the ARRL, neh?

From: CAM Cecil.A.Moore@IEEE.org

>OK Dick, your technical expertise is obviously far above mine. Exactly
>what is the third state in an ON/OFF configuration?

Morse encoding has three basic states -- on short, on long and off. The off state has 3 separate meanings -- to separate the character elements, to separate characters and to separate words. If you wish, you could view each as a state, thus making Morse code a sex-state mode.

Hey, now I know why I like code so much! :-)

>A tristate level might be, for instance, OFF/half-power/full-power.
>That is possible, but I haven't seen it applied to CW. What would
>be the function of that third state?

In digital circuits, the tri-state mode is high impedance -- it, the circuit is not there. I figured that you, as a digital engineer, would understand the analogy.

The use of recognized 10 codes does not hide the meaning of a communication.
If one made up one's own 10 codes, that would be a violation of the rules,
IMHO, but to use one that is in the public domain is just fine.

Look at how lax the FCC is with the rules on unspecified digital codes. The
FCC has clarified that publishing the encoding method for an unspecified
digital code on a web page is suffiicient, so one can make up new digital
encodings and make good use of them on the air. Of course, it the intent of
doing so is to obscure meaning, rather than to do digital experimentation, then
I believe a rules violation would be occuring.

On/off keyed CW is not universal, either. Both international and continental
morse code are legal to use. Perhaps those who feel that only a "universal"
encoding is legal will now give up OOK CW? Or does that only apply to
"non-universal" things that they don't want to hear?

A classic case of circular self-validation! Absolutely classic!

"This book is true because this book says that this book is true!"

Only the FCC rules, Part 97, have any official standing regulating
Amateur Radio operations in the US. And those rules do not
require (or even hint at requiring) that abbreviations be
universally accepted. The idea is patently ridiculous on it's
face!

Using your logic, if a single licensee does not accept an
abbreviation, then that abbreviation is not "universally" accepted,
and is therefore illegal by your flawed interpretation.

Sorry, Carl, but QSL means "acknowledge a receipt" of the information just
sent. "Acknowledge a receipt" means essentially the same thing as "understood".
When an HF ham says, "QSL?", it means "Do you understand?" what was just
transmitted. QSO doesn't mean "understood". It means, "Can you communicate
with _______?", e.g. QSO W5DXP?

For God's sake, Dick, that's not what an engineer means by tristate.
We are talking about the possible states of a continuous wave (not
necessarily Morse code) transmitter. Morse code has absolutely nothing
to do with the keyed OOK states which are 'ON' and 'OFF'. Your ignorance
is showing. The output of the average ham transmitter cannot be tristated.
It is either on or off. Try paralleling two HF transmitters and see for
yourself.

> In digital circuits, the tri-state mode is high impedance -- it, the circuit is
> not there. I figured that you, as a digital engineer, would understand the

'Tristate' is the floating state in a logic gate which can assume a logic
'one' or a logic 'zero' or floating. The output of a typical ham transmitter
cannot be tristated, i.e. directly paralleled with another operational
transmitter. Your ignorance is showing. Try studying CMOS transmission
gates as an example of a tristate device.

Of course it is some guy at the ARRL. The authors are listed in the
front of the book. Part 97 is quoted in full in the back of the book.
Again I ask you: Where in Part 97 does the word "universal" appear?

The Q-signals are NOT *universal*. Then must be dropped. English is
NOT *universal*. English must be dropped. There is absolutely nothing
in amateur radio that is universal. Amateur Radio must be dropped.

"W1RFI" wrote in part ...

> The use of 10 codes on voice has more validity than the use of Q codes on
> voice. Do you similarly berate those who use Q codes on voice?
>
Where in my post did I say that I berated anybody? As a matter of fact, I said "When I mentioned
(politely) that plain language is preferred by Hams," How does that translate to berating someone? I'm as polite as I can be both on voice and CW; always have been. Ed, you should know that from reading my posts over the past three years.

The use of 10 codes on voice has the potential to create situations that can be quite dangerous. As I mentioned earlier, 10 codes are *not* universal and can therefore be translated incorrectly by the receiver. QSL signals *are* universal. They only have one meaning -- worldwide -- So , if I have my "pink card" handy, I can translate them correctly *every* time. IMHO that assists a qso when two different languages are spoken. In order to do that with 10 codes, I would literally have to have each 10 code card from each jurisdiction in the world (just to make sure I had it right) That's the point I'm trying to make.

A bit of clarification. I was referencing the ARRL book "The FCC Rule Book, Complete guide to the FCC Regulations Governing Amateur Radio" On page 4-6, it states "Universally accepted abbreviations may be used, however, when the intention is not to hide the meaning of the transmission; common Q signals, for example" The key phrase here is *not* "intended to hide" but "Universally accepted abbreviations" 10 codes are by no means universally accepted and because of this can possibly lead to real problems in an emergency. I would *much* rather hear Q signals on voice. At least there would be no doubt about the meaning of the transmission.

And *that* list is not valid for the Georgia State Patrol or the North Carolina State Patrol, or the New York State Police. The codes do not all have the same meanings. And therein lies the problem.

> You could theoretically send me something in German that I could
> misinterpret. Is German prohibited?
>
Of course not, but if I sent a "universally accepted" Q signal, there would be no doubt as to the meaning of the transmission. Q signals are understood in *all* languages. 10 codes vary widely and are subject to mis-interpretation.

> Q-signals are NOT "universally" accepted. They are accepted by less
> than one percent of the population on only one planet out of billions
> in the universe.

Q signals are universally accepted within the worldwide Ham community, and *that* is what we are referencing.

My hometown in a suburban region of New York City is well kept
up, very nice, and has been around in its present state for 40 or
more years. And we don't have any CCRs or HOAs. And
antennas are allowed. Don't know about the antennas you would
want to put up, but I do see some beams on towers around town.
Though the towers are not as tall as the trees around here.
Oaks, maples and evergreens mostly. It seems that this
town is an unusual condition regarding antennas, though...

Well aware in broad terms current source, current sink, and open circuit. If FSK is not tristate what in hell is it? Even a model 15 is tristate in that sense -- it does not spill paper all over the floor when no signal is being received so it does have an open circuit mode and what are mark and space if not 1 and 0? That it is carbon-based (smell the burning machine oil) and does its computation thing with sliding bars does not change the argument.

OOK has three states and most compooters have a bitch recognizing them unless one of the states effectively disappears in a solid 30 over nine signal. Such are the limitations of software decoding. Wetware is perfectly capable of distinguishing a fade from the op scratching his butt.

That you spent a lifetime on stuff that did the easy and trivial extremely well is perhaps unfortunate but not grounds for defining things in terms of what these junior bots are capable of doing; leave that to Carl. As a member of the IEEE you are undoubtedly aware that the Hz came about because the compooter jocks were unable to decide whether c.p.s meant cards/sec, characters/sec, or coronaries/session and the famous issue of IBM logic vs the rest of the world. That you are a bit punchy in your Golden Years as a result of dealing with these people is quite understandable but you are going to have to bear some of the responsibility for these ex cathedra pronouncements yourself.

Should you find yourself marooned in the general vicinity of Dodgeville WI, perhaps while picking up a new pair of thinsulate bunny slippers at Lands End, stop in at the Streets of Yesteryear at the House on the Rock there to behold pre-Silicon digital techniques employed for entertainment at the turn of the 20th century before we shot hell out of things in 1914. What these cats did in amusement parks with solenoids and compressed air

rather than silicon junctions, still sounds pretty 1 and 0 digital to me, might give you cause to be a little less dogmatic. That we now put the piano roll on CD in digital form does not make it any more or less a player piano. But I can play the piano -- ain't no good at it but I like being a ham piano operator. When the tones come out of digital reproduction I have to ask permission to play the piano and Bill Gates includes it in Windows and tries to anticipate me.

What if you don't like the easy and trivial???

The ones in common use on 11 meters are the same in every single example I could find. Can you provide any examples of these variations in meaning of the 10 codes used on 11 meters?

>10 codes vary widely and are subject to
>mis-interpretation.

In all of the lists I have seen, most of the codes have the same meaning. I would not characterize them as "varying widely."

Either way, it is moot. The Part 97 rules prohibit the use of codes and ciphers to obscure meaning. I do not believe that the FCC will bust a guy for saying that his "20" is Burlington, CT. The meaning is not obscured to anyone.

Perhaps you mean that it isn't apparent to you that the government does
not require operating CW as a condition for granting an amateur radio
license. No one is ever forced to operate - at any time, in any mode.
Maybe you feel that taking a test is the same as operating? That might
explain our misunderstanding.

I only pointed it out because in his zeal, Carl has a tendency to
overstate the truth on occasion.

That's OK Arnie. I don't want to talk to the Georgia State Patrol or the
North Carolina State Patrol or the New York State Police. All the hams on
our local repeater have a copy of the Texas Highway Patrol 10-codes.

There would be lots of doubt if you sent it to me. I only know about four
of them.

> Q signals are universally accepted within the worldwide Ham community, and
> *that* is what we are referencing.

No they are not, Arnie. I would bet half of all US hams don't know and/or
don't use Q-signals. I don't know them and the only one I normally use is
'QTH'. Absolutely nothing is universally accepted within the worldwide Ham
community including Morse code.

Let me say it a little differently. There is absolutely no reason
that OOK keying has to be Morse code. One can use OOK keying with
any code including ASCII characters, gray codes, prison code, or
any other binary code in the world (or out of this world, for that
matter).

Richard McCollum wrote:
> If FSK is not tristate what in hell is it?

Shirley, you jest. When engineers talk about states, they are talking
about operating states, not power-off states. Normal FSK is a two-state
function, 'mark' and 'space'.

> OOK has three states and most compooters have a bitch recognizing them
> unless one of the states effectively disappears in a solid 30 over nine
> signal.

OOK is a two-state function, 'on' and 'off'. That's what the two 'o's
stand for. If it were a three-state function, there would be another
letter. Perhaps you should invent a new three state function called
OOBK for 'on', 'off', and 'bitch' keying states.

> That you spent a lifetime on stuff that did the easy and trivial extremely
> well is perhaps unfortunate but not grounds for defining things in terms
> of what these junior bots are capable of doing; leave that to Carl.

I am talking about normal engineering terms, Richard. You are trying to
twist those terms in a cutesie way.

Consider CMOS logic. The average CMOS gate has two-states, 'one' and 'zero'.
Some CMOS gates are tristate, 'one', 'zero', and 'float'. But even in the
floated state, the gate still has power applied. To follow your reasoning,
a tristatable CMOS gate has four states. That's just nonsense.

If the FCC finds the League's interpretation valid, why didn't they include
it in the re-write of Part 97?

Typical ham interchange during QRM/QRN:

Ham#1: Your RST is 5 by 6, 5 by 6, 5 by 6. QSL?

Now please don't tell me that Ham#2 doesn't understand RST's.

The dictionary can't help because the word "universal" is completely missing
from Part 97.

W1RFI pompously declared:

> The text of the ARRL FCC Rule Book has been reviewed by several
> people at the FCC.

Whoopdy ding!

Did those "several people" agree that only "universally accepted"
abbreviations can be used during Amateur Radio operations on the air?

Will Riley be busting those of us who use an abbreviation which
is less-than-universal in it's acceptance?

Uh, hello! Guys? Let me duck in here real quick, and then duck right back out. There's already been quite an exchange on this newsgroup that demonstrates just universally *un*understood the Q-signals are. I mean, one ham says QSL means this, another says it means that.

I think it might be best said that 10-codes *and* Q-signals are both quite legal--at least that is what I've always heard. The difference is that a lot of hams find the use of 10-codes abhorrent on ham radio, due to familiarity with CB.

OK, I'm back out.

A tad, althogh the arrogance stills shines like a beacon in the night.
Maybe you can answer Ted...why did Carl state he never had HF privies
before upgrading? Isn't 10 meters considered part opf the HF band? Why
couldn't he yell his LASS TWO over and over on 10? He certainly could
have. I guess the technoloigal elite don;t condiser 10 meters HF??

Oh well. Guess Carl is getting old.

BTW, what's with the refernce to squiggly I read? Just curious.

Actually TITS, it doesn't take a great deal of time if you know how to
define the search area. In Carl's case, about 10 minutes to do the
search and read a few.

It takes a tad longer for you as your posts are much LARGER than most.

And you ARE NOT into DX that's for sure, although you might qualify as a
DXCC entity. You certainly seem to meet the total land mass for a new
DXCC entity ;-)

Gee Ed, and you think some things change. The tome may be calmer, but the intent is still there, only now he's one of those ditthhpicable types. Funny how he now plays the DX type games and has yet to really prove himself a true student under the tutelage of Part 97.

Well, it's been fun, but there snows of winter have fallen in the Rockie Mountains and I am off to the winter games, not only to spectate, but to participate. I am helping provide comms on several of the Alpine events, GS and downhill. Should be fun, should be cold.

It's been a slice of heaven and I am sure when I get back the same people will be caught in the gravity well that is RRAP and W5TIT

Could that be because you're not much of a ham? Just because you don't know them doesn't mean the FCC doesn't intend for them to be the accepted and thus universal abbreviation codes in ham radio.
They are (or were) on the tests, you know. May not be now, after the Grate Dumdown.

Unless you're playing Paul Revere, "On if by land, off if by sea", it's gonna be a real problem for you to communicate by OOK carrier with no further action. The third state, in the case of radiotelegraphy, is obviously the timing of the on-off periods
It seems unlikely that you wouldn't be familiar with that..

Sorry, (and I'm not being arrogant here) I don't know what codes are used on 11 meters because I don't monitor it. I do know that Law Enforcement 10 codes vary widely, having worked in the field for over 22 years, and seen and heard examples from many different states and jurisdictions. When I worked for local law enforcement the city and county had different 10-codes. We shared common "signals" so that we could talk to each other.

anyone.

I agree with that example, but that's not what I'm referring to. Let's say that we were both involved in RACES and I said that I am 10-23 at the intersection but 10-0 ,10-75 because of power lines down. According to my local jurisdiction, this would mean I have arrived at the intersection but use caution in route because of downed power lines. According to your 10 code card, that could mean something entirely different. As I said, therein lies the problem, and danger. Until the 10 codes become more universal -- worldwide -- I think it just invites problems, not solves them.

But what if you were part of RACES and *needed* to talk with another
jurisdiction that used different codes? Would you just gather up all the
different variations just to make sure you got it right?

Cecil, there is a single source for all Hams to get those signals. It's
called a pink card and is available free of charge from the ARRL. All it
costs is the postage.

Not at all...it means the amateur community does NOT hold
any exclusive role in the establishing of, or the approval of
FCC rules. None of us involved in NCI have seen any
reason to not stay the course in our attempt end all code testing.

> >Your reference to "power to the people" is anything

Just how would you expect to truly get the input from "ALL"
existing hams?

> The code
> test is NOT a barrier to being a US ham - it's simply a requirement for
HF/MF
> privileges.

Yes, it is a requirement...however, it is a requirement which (IMHO)
makes no sense and, isn't justifiable at all EXCEPT to meet the
current ITU treaty clause (S25.5).

> Yet the answer seems to be "NCI doesn't care what hams think about
> the issue - codetest has gotta go".

NCI has NO problem with existing hams giving their opinion.
Indeed, we have directed many of the written arguments filed by NCI
as direct rebutle to claims/arguments made by hams. We (NCI) have not,
in any aspect, found any reason voiced to retain code testing as

valid, rational and certainly not compeling.

Cheers,

The "reach a consensus" was voiced by the FCC well before the NPRM
came out. Clearly (IMHO), the NPRM and the subsequent R&O has
laid that to rest.

Kim,

It's not been a problem for as long as I've been working CW, where Q-signals are used quite a bit. (I'm yet to hear a 10-code on CW) It just seems to be a way to make a point here on the NG. I've tried to stress that 10-codes are not universally accepted, and that they can actually create problems in given circumstances. But I guess everyone is just going to stick to their guns on this one.

OK, so there are two versions of OOK CW that are both legal. But there are a large unknown number of 10 codes in use, limited only by the imagination of anyone who wants to make up his own. I guess then that all are legal for use on the ham bands, particularily since they were brought over from CB. I guess we should have known that anyone who wants to lure all the CBers into ham radio would support them any way they they can.

Your point? There are many similarly based organizations
today that are devoted to any number of causes. Me thinks
you are more unhappy about the ability to do so, rather than
the fact that we exist at all.

And just how many people might have thought that would be the case?

> Yet after the dust cleared in late 1999 the R&O EXACTLY matched everything
that
> had been predicted 2+ years earlier.

Yep, surprised even me as to the extent of the changes.

> Ever hear the expression "rooster taking credit for the dawn"?

How much of an impact anyone had on the actual result won't
ever be known...unless some FCC staffer publishes their
memoirs of the internal discussions leading to the R&O.
I will note that at least we (NCI) not only encouraged
our members to file comments, but we also made our
own personal ex parte presentation directly to the FCC (as
did the ARRL). Frankly, I don't care about taking
credit for anything. The changes were made and we are
still working towards the final end of all code testing.

Cheers,
Bill K2UNK

Arnie, it has been made very clear that as far as Ed and HQ are concerned, if you don't bow, scrape and kiss their butts, massage their every paranoia and handle them with the most gentle kid-glove technique you're berating them and destroying their egos en masse, thus depriving them of lifelong avocations as "productive" hams.

Since the text includes the phrase and the FCC reviewed it, it stands to reason that they accept the language. Otherwise the FCC would have asked the ARRL to change it.

What you are arguing for is chaos on the air in order to make a point. Universally accepted Q-signals have been around for a long time and have -- worldwide -- acceptance. I don't think Riley cares one way or the other regarding enforcement. It is my understanding that he has said he doesn't think they (10 codes) are illegal, but I haven't seen it quoted anywhere.

No need to be proud, just pleased that we are getting
the results we set out to obtain. Those that opposed us are clearly
not "happy campers" as they appear (IMHO) to have never
expected the changes that have come about.

How much actual influence we had means little as long as the results
are obtained.

Bert,

You have made the wrong assumtion . Clearly there has existed
a "nocode test" license for over 10 years which, if your assumption
had been correct, would have never lead to the creation of
NCI in the first place.

Cheers,
Bill K2UNK

> skills. Should they be stricken from the writtens?

If you got both of those questions wrong, you could still
have passed the test. Equating the "separate" morse test to
one or more specific subject areas on the written is not
a valid comparison.

> Are not the
> writtens challenging to the point on causing "people to spend
> considerable (for some) time with no real purpose" wrt some of the
> questions?

The written is a composite of knowledge. If YOU disagree with
some of the subject areas...or questions, you are free to
send comments to the VCs that create the question pools.

> Why not just eliminate all testing as it's really kind of
> open to interpretation as to what's "purposeful" and what's not? Do we
> really want to leave it to "most of the administrations and the FCC"
> to decide that for us.

The decision as to what is or isn't purposeful is the FCC's.
If you feel there should be no testing at all, YOU are free to
file comments to that. I have no problem with the written tests
as being requiired and I have no time to waste in arguing for them
because the FCC also believes they should continue. IF
the FCC were to consider otherwise I would get involved
at that point to retain the writtens.

> Sorta smacks of "my big brother says I'm
> right...so there!"

If you think the FCC is being "big brother" that's something
you'll need to discuss with them. NCI filed comments like
everyne else (including ARRL) as to what we thought was
the right thing to do. THE final decision wasn't made by
NCI (or ARRL) but rather by the FCC. If you read other
comments in other posting there are some (N2EY) that
believe the change was pre-ordained by the FCC and that
NCI made no difference as to the actual outcome. If
that is true, we (NCI) sure have enough people wishing
we'd just go away.

> C'mon, let's put it to the vote. A vote every five
> years polling all US licensed amateurs re. whether or not to retain
> element 1.

FCC rules changes are made as a matter of public policy...NOT
simply because a majority of voting licensed hams might want
it one way or the other.

> After all, is it not OUR hobby/service to shape?

No, it is a PUBLIC licensed service. Those that are already
licensed don't get exclusive control of the rules and regs.

> Are we not a microcosm of society as a whole?

Not at all. No more than any unique interest group is
likly to be.

> "By the people, for the people, and
> OF the people?"

I note that you didn't write: "By the HAMS, for
the HAMS, and OF the HAMS."

> Where's the "faith?"

Take it up with the FCC. THEY are the ones that would
have to take such a position.

> Let me be frank, (but call me
> Bert) 5-wpm's not a "barrier."

You are entitled to your opinion.

> It's an inconvenience, particularly if
> you don't plan on using CW. For me, it's the starting line.

You are still entitled to your opinion :-)

> It's far
> easier to cross the starting line rather than try to paint it over and
> argue that it shouldn't have been there in the first place. Just MHO.

Ditto my last two comments.

Yes, let's paint all techs as having "cheated" to get their license.
Of course the absence of any factual data to sustain that claim
seems to mean nothing to Dick.

You're not keeping up, Bill. It was AFTER the r&o that statement was made,
ie "We don't intend to make further changes in rules until there is a
consensus
among hams as to what those rules should be" or words to that effect.

You can't really be that dense. I am not arguing *for* anything.

I am arguing *against* the mistaken assertion that abbreviations must
be "universally accepted" before they are legal to be used on the air.

The ARRL book in question is an excellent book, but it has absolutely
zero regulatory standing, even if every staffer at FCC reviewed it.

I've been active on the air for 40 years, have been using all sorts
of less-than-universal abbreviations for all those years, and I don't
notice that I've caused any of this chaos you predict. In fact, I
have been elected to the A-1 Operators Club based on unsolicited
recommendations of other A-1 operators.

With all kind wishes,

de Hans, K0HB

What is it about 10 codes that suggest "They should NOT be using ten codes,
and they know it." There is certainly no prohibition against doing
so.

When/where has Riley made such a ruling/misreading.
As to your claim that the rule means no 10 codes, well you
are entitled to your opinion. Most others seem to disagree.

> Send a 10 code to an amateur in Russia and see how
> universally accepted they are.

Send an English sentence to many other hams and they won't
recognize it either. English isn't universally accepted either.

Now that I think about it, anybody want to try to make a dipole with
114nm long elements, and work out the details of a transmitter? :)

A colinear of, say, 10,000 wavelengths would still be a small enough
for portable use, too...what kind of gain should that get?

Maybe the FCC should incorporate the ARRL book by reference so everyone
that is a ham can benefit from this "official" FCC statements of
interpretation.

> What you are arguing for is chaos on the air in order to make a point.

What I am saying, Dick, is that a code and a keying method are
entirely different entities. For instance, OOK can be used for ASCII
completely unrelated to Morse code.

That is not considered part of the state, Dick. What code is being
used is irrelevant to what keying (modulation) method is being used.
ASCII can be sent using OOK with no relationship to Morse code at all.
Morse code can be sent using FSK.

Not that this applies to you, Hans. But did you ever hear about the guy who had 1 year of experience, 20 times? I suspect that the operators on the other end of your transmissions were familiar with the less-than-universal abbreviations you were using. However, if you say "egg", I would have to presume that you mean that white thing that comes out of the chicken. If my 10-code says it's a fire engine, we could have some serious mis-communication.

I'm quite familiar with the A-1 Operator club. Go to my web page and you'll see a list of all the organizations in which I have membership.

It surprised me a bit when Ed implied that I berated folks. I guess the
Borg, (I mean the ARRL) has assimilated him : -)) Come back, Ed ... you
can still be saved.

...and if you put your radio under a pyramid at night, it will probably
put out even MORE power. Stroking your microphone with a chunk of
quartz crystal will improve frequency stability. A rabbit's foot buried
at the base of an apartment dwellers antennas can impart magical
increases in gain.

Well you can always be guilty of poor amateur practice. FCC can't be responsible
for your avoidance and ignorance.

>large unknown number of 10 codes in use, limited only by the imagination of
>anyone who wants to make up his own.

If one makes up his own to obscure meaning, that would be a violation of the rules. Can you cite any examples of on-the-use of unknown 10 codes?

I disagree that there are a "large unknown" number of 10 codes in use. The ones I have heard in common use are all the same.

Can you provide any examples of instances where 10-20 does not mean "My location is..."?

>I guess then that all are legal for use on
>the ham bands, ...

Those that are not intended to obscure meaning are, IMHO, legal for use on the ham bands.

> I guess we should have known that anyone who wants to lure all the CBers
> into ham radio would support them any way they they can.

Do I infer from this that you believe that CB should no longer be a major source of new hams, as it has been for decades? Are you trying to fulfill your prophecy that ham radio is doomed by ensuring that no one wants to become a ham?

Having been on the other side of many of Carl's barbs about five or six years ago (or was it longer), I think that his approach to life has changed more than a tad. Take a look at some of his discussions with me.

> althogh the arrogance stills shines like a beacon in the night.

That can be said for many here, can it not? Are you going to go after them all equally? :-)

>Maybe you can answer Ted...why did Carl state he never had HF privies
>before upgrading? Isn't 10 meters considered part opf the HF band?

In my years of discussing things with Carl, I never understood him to be anything except a Tech+. And his priveleges used to include 15M, 40M and 80M, too. He did say that he did not have any significant HF priveleges, and I would agree with that.

The only 10-code I feel that is okay to occaisionaly use, as it is widely known, is 10-100, i.e. for a bathroom break. :)

Sounds a little bit better that "gotta go see a man about a horse" or "water the lillies" or any other cute euphimism to explain the same meaning.....

10-3 vs. 10-4 in APCO..... (Acknowledge versus Affirmative, may be the other way around) Gee, isn't an acknowledgement about the same as an affirmation?

Slipped up and used QSL on our fire departments radio when responding to a question from Central Dispatch here. The problem I have, is I am a Campus Safety Officer by night, On-call Firefighter by day and a ham too. Verbage and codes etc sometimes cross-over for me! I have accidentally used the ITU phonetics at work instead of APCO, and that caused a problem.....

Cecil, checked out your callsign on Qrz.com and almost freaked! Put a thick, bushy grey mustache like B.J. Hunnicut had in M.A.S.H. under your nose, and you would look just like my dad..... Gee... can I start calling you Dad??? Just joking!

I have created a presentation for the project for getting firefighters, EMS and L. E. people interested in ham, and of course some other groups (civic groups), and am looking for some good sources for disaster images with hams or no hams in the picture to include in the presentation.

I have found all of the other images I would like to use though....

I've had them in my ARRL Handbook for 50 years and I still
don't know them. Five or so Q-signals are all that I have
ever needed to know.

Dick, I have only ever needed to know about five Q-signals. Why should
I waste my time learning the rest of them? Ham radio is a minuscule part
of reality. It is NOT all there is to reality.

That just proves that the code and the modulation method are two different
things. OOK is a modulation method not necessarily related in any way to
Morse code.

Nope, you missed it again, Dick. The subject was the meaning of
"tristate" as used in electronics. You continue to confuse the
keying method with the coding method. OOK doesn't necessarily
have anything to do with Morse code. You can use OOK to report
the state of the last coin toss.

I know you feel that the one and only subject in the world is
radiotelegraphy, Dick, but some of us discuss different topics.
There is simply no way that OOK can be tristated. If it can be
tristated, it is not OnOffKeying, by definition. Morse code can
be gated through a two-state gate or a tristate gate. It is the
electronics that determines the electronic state, not the code,
and no CW transmitter I know of tristates the output.

That's an insult, how dare they not post such articles. I remember in the late 70's and the early 80's 73 magazine carried mods for just about every single chicken band radio of any significance.

The average ham sits around with his mike in one hand, his cock in the other, and kerchunks the local repeater all day while jacking off.

Sorry, that's just the way it is. The tests are so easy, they're meaningless, the hobby is going down the tubes, fast.

The freebanders will become the real hams within a few years.

The average no-coder has the intelligence of a fart. A no-coder buys his two meter hand held, takes it out of the box, and talks. A cellular phone user does the same thing. What's the difference? The cell phone user actually gets quality communications.

These new no coders are nothing but cellular phone user wanna bees. They can't afford the monthly rate of a cell phone, and their trailer park doesn't allow external antennas so they use their little two meter hand held jackoff box.

We've got to get those damned truck drivers off the cb. Trucks suck,
and truckers suck even worse.

The average truck driver is even dumber than a no-code technician, and
I didn't think that was possible.

The average trucker smells like a pile of crap because he bathes maybe
once a year at most.

We need to pass a law making it illegal for truckers to use two way
radio's of any kind. No antenna on the trucks, no radios in the
trucks.

Trucks and truckers are a menace.

> a state, thus making Morse code a sex-state mode.

Actually, as you alude, there are ALSO different lengths of the "off"
state, but there are still REALLY only 2 states ... "On" and "Off"
...
all the length variables do is screw up the performance by meaning
that the symbols are not uniform and therefore optimum detection is
not possible as with, for (a very simple) example, BFSK RTTY
with uniform symbols.

As has been pointed out previously, simple BFSK, at equal data
rates, has a 9 and change dB weak signal advantage over OOK
CW (despite your attempts at tongue-in-cheek humor :-) and there
are a number of much better-performing alternatives which are
well within the reach of amateurs.

> In digital circuits, the tri-state mode is high impedance -- it, the
circuit is
> not there. I figured that you, as a digital engineer, would
understand the
> analogy.

In CW, the addition of additional "states" (which I don't agree are
REALLY there, but will grant for the purpose of this argument),
generates a situation where the PERFORMANCE is "not there,"
compared to better techniques :-)

(but, despite the fact that he LIKES Morse, Ed is technically astute
enough to know that that's how the math/reality work out ...)

Problem is that Dick either doesn't realize (or can't/won't accept)
that OOK Morse is NOT the ONLY means of "radiotelegraphy on
ham radio." RTTY, the various "TORs," and other techniques
are ALSO "radiotelegraphy on am radio." Dick just doesn't (or
won't) recognize that and therefore he can't separate modulation
from coding because for him, apparently, "There's only ONE way."

Sad that an extra apparenty can't comprehend the distinction ...
maybe the tests were "dumbed down" when Dick took his? :-)

> no QRM/QRN/QSB would "take the fun out of it."
>
There's a whole litany of valid objections cw users have with any such
scheme, those are only two and I at least partially agree with both. I
prefer cw mostly because of it's utter simplicity and superior
effectiveness given the usual ERPs vs. propagation/noise level
conditions and investments and for no other real reasons. I don't
"love" cw any more than I "love" any particular screwdriver in my
toolbox. CW is just the tool of choice I usually use to get the dxing
and contesting job done for demonstrably logical reasons based in
timeless physics. One difference between thee and me Sweetums is that
I have one helluva power tool in my toolbox YOU don't know how to use.
Which is YOUR loss. Don't believe for one second that the PCTA bunch
is gonna sit still while you work at pulling the cw mode any further
down toward your level.
>
>
Sure, ya can get deeper into the noise keyboarding with the likes of
PSK31 and Pactor but there goes the simplicity and cost advantages of
cw. Might as well dial up my ISP and jump into a chat room.

>

>
>
It's absolutely gonna happen Squiggy, we're quickly closing in on the
day when we get enough bandwidth via the fiber optic networks to bash
each other in all kinds of contests with our Sony Playstations and
those only cost $200 now. And without a need for federal licenses and
sure as hell without any code tests or problems with cc&rs, towers,
amps or objections from the PCTA contingent. But I expect we'll have
to pay somebody mightily for the license to have a decent NFL
quarterback loaded into our Playstations. Zzzzzz . . .
>
>
See Squiggy that's not RADIO any more than your digital "simulated
contesting enviornment" is radio the way hams do real radio including
the contests. All you're proposing is a particularly lame shadow of
Internet Playstation interconnectivity using the HF radio spectrum
instead of the fiber optic network. Lead balloon.

We've had thousands doing it simultaneously mostly in the lower 50 Khz
for decades with the oldest modulation scheme on the planet. Tune
14.000-14.050 on Sunday morning during the upcoming ARRL cw dx test.

Including the four second split freq qsos with the dxpeditions? Yeah,
right. Or perchance do you also propose creating virtual dxpeditions
too? Your "concept" can be taken anywhere ya wanna take it Squig, just
depends on the limits of yer inanity. Which, the way I see it,
apparently have no limits.
>
>
You're a troll who has tossed out enough techo razzle-dazzle bullshit
to collect some witless groupies. Now go play with yer RADIO and best
of luck with the dxing.

>
Certainly, the 900Mhz band is wide open and available for the
development of the fast digital modes we've been assured by people
like yourself are the wave of the future in ham radio. You haven't
done a thing about it despite yer bluster of yore in this NG, you're
out sniping new ones on ssb. And TAPR is already five years into two
lousy FHSS boards they still don't have working. And you don't think
much of their efforts. Either the future of ham radio is in deep
doo-doo or all the smoke & mirrors you digigeeks have been pumping is
exactly that.

Why? How so? Same information, simply an easier, more
effective method of delivery ...

> It kind of boils down to "what's the point?". I'm not suggesting
everyone wants to
> send QSLs, but if you do, why would you send an eQSL?

To confirm a contact ... same as a piece of paper sent through
old-fashioned mail.

> It's impersonal

Why? How so? Same information, simply an easier, more
effective method of delivery ... while eQSL has some "stock
card" formats (like many conventional QSL card printers),

you can also upload your own graphic to make your card as
personal and unique as you want ...

> has no value

According to the ARRL's current anticompetitive policy,
based on their desire to spend a lot of member $$$
reinventing the wheel with their "Logbook of the World"
program ... solely for the purpose of maintaining a
stranglehold control over things.

> requires some hassle to "put in the shoebox" at the recipient

What hassle would that be ... are you talking about the act
of printing the electronic card vs. the act of going the the
mailbox, opening the envelope, etc. ??? (BFD "hassle")

> and is unwelcome clutter in my email.

If you want the confirmation of a contact, why would it be
"unwelcome clutter in your e-mail" ???

> A paper QSL, even a very nice one, is cheap (mine cost
> less than a quarter,

Plus postage, plus envelope if you want it to stay nice,
plus SAE, plus IRC or "green stamp" ... etc. if you want to
maximize your chances of a reply ... it adds up to a LOT
more than "less than a quarter" ... the eQSL is MUCH more
cost effective and far more timely as well.

> and they are very deluxe

I'm impressed and I haven't even seen one (not!) ...

> -- you can design and print your own on your
> computer if you wish). A paper QSL can reflect your personality,
your
> creative ability, or your personal interests.

And so can the electronic version ... the ONLY difference is
where it gets printed and whether it's delivered by electronic
means or old fashioned postal means ...

> It is the tangible token of
> our intangible electronic communication encounter.

Once printed, an eQSL is JUST as tangible ...

> If it's too expensive for you, then don't do it,

"Do it Hans' way, or don't do it!" (baloney ...)

> but please keep you electronic cards at home.

Not to worry ... I won't "darken your (electronic)
mailbox" ...

I have reviewed every text that I have on CW and Morse code and none
of them talk about more "states" than two (on/off). Dick has
obviously confused "states with "elements" and, as usual, is all
output and no input.

In article <3c3caf6b_1@news7.fast.net>, wa6vse-shack@fast.net says...
> According to the ARRL's current anticompetitive policy,
> based on their desire to spend a lot of member $$$
> reinventing the wheel with their "Logbook of the World"
> program ... solely for the purpose of maintaining a
> stranglehold control over things.

Actually, it's because the "owners" of e-qsl will not allow their software to interface with any of the logging programs on the market today without a substantial fee. The range tossed about was anywhere from 5 cents to 15 cents per card downloaded into a logging program.

Seems to me the eqsl people are attempting to seriously profit off an idea that allows so blatant forgeries to occur, despite their authenticated formats

I seriously doubt the ARRL wants to maintain a stranglehold due to the fact they freely allowed the software people to have the necessary means to incorporate the downloading of eqsls into their programs. This fact alone disproves anything you just made mention of.

BTW, according to the eqsl site, the name eqsl is supposedly their registered trademark.

I take it Carl, you dislike the ARRL? Are you a member and if so, why? I don't meet to many people who support organizations that they dislike so much.

Just a curious lurker here. Seems so many people have Giant Sequoia sized chips on their shoulders here.

For the sake of brevity, I'll give one example of each ... (well, maybe two)

How have they screwed up? An example of this can be seen in their current position as it relates to the re-farming of the Novice bands. Although they haven't made it official, it is quite clear that they are in favor of expanding phone privileges down into the what was Novice CW/digital. If they were indeed looking toward the *future* of Amateur Radio, they would be fighting to retain these bands for CW/digital use. SSB is old and quite the bandwidth hog; hardly the future of Amateur radio. Emerging technologies like PSK31 should be encouraged. It seems to me that the ARRL is just encouraging more SSB use at the expense of the new digital modes. I guess all those new Generals and Extras need somewhere to go, huh?

What are they doing right? They are continuing to fight the battle to expand PRB1 to include CC&Rs that restrict antennas and equipment designed for Amateur use. Although I think one should always check out the restrictions before building (I did when I had my house built a few years ago) some CC&Rs go well beyond what would commonly be deemed reasonable.

and, (most importantly) they still will send you a pink card, free of charge.

...and if you put your radio under a pyramid at night, it will probably
put out even MORE power. Stroking your microphone with a chunk of
quartz crystal will improve frequency stability. A rabbit's foot buried
at the base of an apartment dwellers antennas can impart magical
increases in gain.

Where'd you get that idea? There are a slew of logging
programs that import and export the "adif" format ... that's
all that seems to be required to upload logs to eQSL ...

> Seems to me the eqsl people are attempting to seriously profit

Oh, not the "Nobody should EVER make a buck or two off
of amateur radio, no matter how much work they put in or
how useful their product or service is." philosophy again ...
PLEASE ...

> off an
> idea that allows so blatant forgeries to occur, despite their
> authenticated formats

I'm satisfied that the system can provide reasonable
integrity ... I have a login name and a password, which
were issued through a reasonably secure process,
and I sent in a scanned copy of my license, which a
person reviews (and can compare with FCC records
which are available on the internet) ... I don't see the
big "security issue."

> I seriously doubt the ARRL wants to maintain a stranglehold due to
the
> fact they freely allowed the software people to have the necessary
means

> to incorporate the downloading of eqsls into their programs. This
fact
> alone disproves anything you just made mention of.

My understanding (and I'll stand corrected if I'm proven
wrong) is that the ARRL's (proposed) LOTW system
will require that everyone obtain a secure digital ID
(for a price) and that all logging software will have to
be updated (at a price) to comply with the "standards"
being set for LOTW ...

> BTW, according to the eqsl site, the name eqsl is supposedly their
> registered trademark.

And the problem with that is? (Do you have a problem with
people protecting their intellectual property or trademarks?)

> I take it Carl, you dislike the ARRL?

I take issue with SOME of the ARRL's policies and practices.

In this case, according to the information I've seen, the ARRL
refuses to cooperate with eQSL, stating that ONLY their LOTW
system will be acceptable. (though I understand it may be some
time before LOTW and compatible logging software are available).
Seems to me that the ARRL is needlessly spending a lot of
members' $$$ to build a system which duplicates an existing
system which is available for FREE - NOW ... and for which
there exists quite a bit of compatible logging software ... some
commercial, some shareware, and some totally free.

That to me is a waste of members' money and, perhaps could
even be construed as "anti-competitive" or monopolistic ... as
a member, I object.

> Are you a member
Yes, have been for 25 years or so ...

> and if so, why?

Because, despite the fact that I disagree strongly with SOME of
their policies and practices, the ARRL does do SOME good things.

I hope this answers your questions to your satisfaction.

Surprise, surprise, Arnie ... we agree on this part of the issue
(I sincerely hope that doesn't scare the hell out of you :-)

> SSB is old

Yes, SSB is getting old ...

> and quite the bandwidth hog

Actually, SSB is pretty spectrally efficient as a voice mode,
requiring only the same bandwidth as the baseband signal
being transmitted. To get the same audio quality in the
same bandwidth with digital modulation takes some pretty
powerful processing.

> hardly the future of Amateur radio.

Like cw (surprise), SSB has a place in the future of ham
radio ... but other modes will emerge as well.

> Emerging technologies like PSK31 should be encouraged.

I agree ... (again, don't be frightened :-)

> It seems to me that the ARRL is just encouraging more
> SSB use at the expense of the new digital modes.

My gosh ... again, we agree ... I also think that space should
be preserved for "digital expansion" and that the amount
of spectrum devoted to SSB need not be expanded.

> I guess all those new Generals and Extras need somewhere
> to go, huh?

Don't spread it around in the wrong circles, but our bands
aren't really overcrowded ... and a little pressure on spectrum
occupancy would be a good (and probably needed) motivator
towards the adoption of more spectrally-efficient techniques.

> What are they doing right? They are continuing to fight the battle
to

Wow!!! I also agree that the battle against CC&Rs and other
unreasonable antenna/operating restrictions is VERY important.
In fact, I wrote NCI's comments FULLY SUPPORTING the ARRL's
petition to the FCC on the matter ...

> and, (most importantly) they still will send you a pink card, free
of
> charge.

Well, Arnie, I guess, we have to disagree on something ...
I don't really give a damn about the pink card :-)

I think that some of Ed's work at the ARRL lab on interference
issues is more important than the pink cards ... (seriously).

Just listening to the ham bands I can see the League is still screwed up big-time. Guess I didn't need to ask the question in the first place. Maybe I just wanted to hear insider info that they were going to update their corporate policy to start improving ham radio again and ham operators rather than line their pocket books and bank accounts.

And I'm not going to ask a division director anything. They ignored the membership before, I don't need to hear them say they'll do it again.

Oh it's not hard at all Roger, figuring out who forwarded that
email to you, but to do so would compromise my sources of
information. I will tell you this much so you know that I know
who forwarded you that email. The rat is located in Georgia,
need I say more? Of course we expect you to respond to
this posting with your usual lies, denials, and filth, but that doesn't
change the fact that my email correspondents informed me as to
who and where the leak was.

Why not just use "Roger" or "Understood" on voice? All it takes on Cw is "R" (which is where "Roger" came from, by the way).

I think you mean "American Morse code" and "international morse code".

Is it legal to ID with American Morse?

>

Boy your not to swift are you? Just for your Info the Brick house you are speaking of sold in 7 days, the people that bought it have been living in for over 2 Years the house has not been sitting Empty at all, next time get your facts straight. As a matter of fact, I was in Canton and Cleveland over the Christmas week and stopped at the neighbors who live next door to the house you are talking about, guess what there was no For Sale sign, and the same People are still living there.
Before I sold the House in Ohio I still claimed Ohio has residence, now let me explain something else you might not be aware of. Some people own more than 1 Home at a time, even though they may not be in the same State, boy your not very swift. As a matter of fact I presently own 4 Homes, 1 of them is on Lake Cable which I have owned for many years.
You should have told me you were in Canton, when I was there at Christmas worked some good freinds on 79,12 and a couple of the 440 Repeaters

No, klass klown, THE subject is radiotelegraphy, much as you try to sidetrack it,

So you don't know much about radiotelegraph transmitters, then? Of course it's the operator who (or which, in the case of a mechanical device) which adds the third state.

>I just wanted to hear insider info that they were going to update their
>corporate policy to start improving ham radio again and ham operators rather
>than line their pocket books and bank accounts.

I have watched Riley Hollingsworth give a few "enforcement" PEP talks. In each of them, he notes that the persistence of the ARRL in keeping at the FCC to take up Amateur enforcment was an important part of what brought the FCC back into the enforcment business. That stemmed from a real desire by all hams, including those who are ARRL Board members, to see ham radio be a better place for all. IMHO, that is part of improving ham radio, no?

My own work for ARRL HQ is also intending to improve ham radio. Is ham radio improved when I go to RFI industry meetings, to work with manufacturers and industry groups to try to mitigate RFI problems before they happen? The notches that have been put into the industry specifications for VDSL, Home Phone Networking and HomePlug products are a direct result of the work of the ARRL.

What "pockets" and bank accounts are you imagining, Vince? Mine? I am paid an unfair salary for a lot of work. :-) The ARRL Board and officers? Other than the 3 officers who also have to show up at work everyday like every other working stiff, by policy, the entire ARRL Board and slate of officers are unpaid volunteers. The only significant bank account I know of represents the investment of life membership dues -- to do otherwise would be fiscally irresponsible.

If you are talking about the ARRL policy wrt code tests, I disagree with you if you say that the Board did not listen to its members. There was no majority in the formal surveys the League did. In those surveys, 50% of the members wanted a maximum code speed of 12/13 wpm or more; 50% of the members wanted a maximum code speed of 12/13 wpm or less. The ARRL's proposal to the FCC was for 12 wpm.

Vince, I am sure that you have disagreements with ARRL policy. I do from time to time. But couching those disagreements in terms of lining pockets and bank accounts detracts from the real discussion.

A friend of mine used to work in a "new age" bookstore. When the store computerized, he had a horrible time with the computers. One day, I pointed out that the ICs in the computer were all made of silicon crystals and told him he should tune in to the crystals. His problems vanished overnight.

You tell me... :-)

It shouldn't scare anyone, Carl. If we have learned anything from each other over years of discussions, it is that there is always common ground.

I will let the stated opinions on SSB expansion stand on their own, but will point out that ARRL's digital voice committee is working toward seeing HF digital voice come into use in ham radio.

>Like cw (surprise), SSB has a place in the future of ham
>radio ... but other modes will emerge as well.

Hmmm, with your renewed interest in ham radio since your upgrade, what percentage of your QSOs have been SSB? :-)

Source record: 30451

Well Ed, I can say I most likely will never submit to the ARRL for one main reason, and I quote from the person I talked to about even getting the ARRL to send me a order form in order to pay for membership via snail mail. The statement given to me when I asked for a form, was

"We don't do that here, can I have your credit card number please?"

I responded with

"I do not have a credit card, I just want you to send me a form to so that I can mail payment in."

She responded with

"I'm sorry but we don't do that here, but when you get a better job and get a credit card like the rest of the normal world, call us back." And then she hung up.

I am so offended by that. What if the situation was that I chose not to have a credit card because of personal choice? (aside from other reasons of not having a credit card)

If this is the level of professionalism by the ARRL, I may as well hand in my license, as apparently they "run" amateur radio more than the FCC.

As far as the staff in the district, who the hell are they? (I can read a listings of names in older QST's) In the multiple clubs that I belong to, I have only met/seen ONE of these people and that is only because she (KA8YKK) had a position with the club also. These are clubs that are ARRL affiliated. Seems to me these people, although that they may have a larger geographical area to cover, should be seen at least once a year.

The District 3 net organization fell on its face when one person from Genesee County, MI "stoked the coals" and now there is not a net for message traffic or District business and information. Is the strength in the ARRL?

As far as defense of Amateur Radio, I guess the ARRL may be doing a good job in that regard, although some hams may beg to differ with that, what the hell is the ARRL doing in offense, (to use the sports term)?? Positively promotion of amateur radio and education of the general public will get greater yields, as opposed to constantly having to defend itself. As a person, I find it is easier to educate someone about myself, or my activities as opposed to having to be in a defensive mode. Where is the P.S.A.'s for example??? Broadcasters are obligated run P.S.A. spots for a certain percentage of their broadcast day. Lets see the ARRL create a spot to run. Seems like a smart investment. What about promotional material? I have had to resort to creating my own phamplets to pass out to prospective

new hams. I just have created a really nice Microsoft Powerpoint presentation, and am searching for .jpg/.gif/.bmp images to utilize in this presentation, such as some disaster scenes with hams involved in some aspect or another, some scenes involving ham activities from field day to other activities similar and cannot seem to seem to locate any on the arrl.org site or get any response via email.

Maybe once sometime in the future, I may join, but in the meantime, I would be "tickled pink" if some organization was formed to give the ARRL a run for their money. Competition is a good thing, and keeps from becoming complacent. I know the question was not directed towards me in the original post, but I have been keeping this bottled in for so long, and needed to vent.

1041. Post on QRZ.COM

Newsgroup: rec.radio.amateur.policy
Date: 2002-01-10 13:02:52 UTC
From: KC8PMX <kc8pmx@tm.net>
Message-ID: <0ig%7.261$rU.59886@monger.newsread.com>
Source record: 30452

This was found on the QRZ.COM website and I found that this could be very scary for us. Since there is a Chippewa tribe/reservation about 15-20 miles away from where I live, this could impact my area also.

Dave Estrada writes "Greetings to all,
I was reading an article in the January 2002 edition of "WIRED" magazine. On page 54 I found an article about DeWayne Hendricks, the Broadband Cowboy.

The article written by Brent Hurtig details the passion that DeWayne has for the power of wireless networks. DeWayne is currently working on a wireless network project for the Chippewa Indian reservation. In exchange for a state of the art wireless network, the Chippewa are willing to assert their sovereignty over the air and sky above the reservation. What this means is that they are willing to use software defined radios to accomplish the goal. Software defined radios can transmit on several frequencies, including those authorized by the U.S. government for use by licensed amateurs. Although DeWayne says that these radios would transmit at very low power and noise levels, they may still decide to use some amatuer frequencies to operate the wireless network.
I believe he is hoping that someone will complain about this, when that happens and the FCC is made aware, the Chippewa will assert their sovereignty in a court of law if needed.

I have read articles that our amateur bands are at risk of being sold off to the highest commercial bidders. DeWayne clearly points out the zeal the government has for trying to protect transmissions from interfering with each other. He said that the government reserves the vast majority of frequencies for public agencies, corporations and groups like ham radio enthusiasts. I thought for a moment to myself, I wonder if DeWayne is a ham.

A quick name search of the QRZ database revealed that DeWayne Hendricks is one of our own. Callsign WA8DZP.

It appears that he is trying to challenge the FCC into loosening its grip on spectrum. What he wants is the FCC to try and stop the networks from either forming or operating at all. Thats when the Chippewa will stand up and claim the right to the air and skies above their reservations. For this to happen, someone has to complain to the FCC about interference.

If our spectrum is at risk of being sold to the highest bidders, then maybe he will play this hand in order to get the ball rolling. If that does not work, he might be able to play some colorful tapes recorded from 2 meters or old timers acting silly on 40 meters. Either way the clock is ticking. Please watch what you say on the air. Someone is always listening. All we need is to lose one band and then the flood gates will open. Money talks and Bull#@%* walks.

If you happen to live near the Chippewa reservation,(N Dakota?) or not, watch out for the Broadband Cowboy. Reports of interference could just be what DeWayne wants. He lives in Fremont California near San Francisco. He also sits on the FCC's Technological Advisory Council. Sounds like he has his finger on the pulse of ham radio for sure.

Please know I am not out to get the Native Americans. My lovely wife was born in New Mexico, and she knows that Fry Bread RULES.

I am only trying to point out the reality of losing spectrum someday, even to one of our own...a ham radio enthusiast, the Broadband Cowboy.

Happy New Year and 73 from Southern California

Dave KD6HDX"

He's toned down the animosity a bit, but he still exudes attitudes of disdain for many radio amateurs and their activities. Phrases like "beep real fast" and "CW Olde Fartz" are still common in Carl's posts.

And a few nice posts do not immediately erase the memory of years of nasty ones.

The thing to watch in anyone's postings is not how they behave when someone agrees with them, but how they behave when someone disagrees.

So NCI doesn't care what hams think about the issue.

Note that Bert proposes a vote of all hams, not just those who have passed a
code test. Note also that those who comment to the FCC on amateur radio matters
are overwhelmingly licensed radio amateurs.

>None of us involved in NCI have seen any
>reason to not stay the course in our attempt end all code testing.

Which means that even if the vast majority of hams of all license classes
disagree, it doesn't matter.

>
>That's pretty strong

Is any of it untrue? Did not the FCC propose a nocode license in 1975 and again in 1983, even though the vast majority of those who had an opinion on the subject were against it? Did not the FCC make it clear in their statements about the Technician license in 1990-1991 that they didn't see the code test as necessary for ANY reason other than S25.5?

It's all true, Bill. FCC wants out of code testing for a variety of reasons.

>and not consistent with many
>of the opinions of the Pro-code Test advocates.

So? Those who support code testing are not a monolithic group who agree on anyhting. I don't speak for any group - I just present my facts and opinions.
>

My point is simply that the FCC seems to have formed its opinion long before 1998.

I entered as a No-code Tech and was *very* lucky to have NC5S as my Elmer.
He is a very experienced operator and taught me how to do things the right
way, including how to manually tune my radio and build my own dipole
antennas. These may seem like trivial things, but they were very important
to me. I think we need more like him in Amateur Radio. Unfortunately, I
believe the ranks of the truly experienced elmers are starting to thin out.

I've never before heard any reports of a Circulation staffer treating a potential member like that. If one did, and the Circulation supervisor or manager found out about it, that staffer would be toast.

In any case, we certainly do accept membership applications by mail. You can find a form at: http://www.arrl.org/member.pdf Or I'll be happy to mail one to you if you want.

Sometimes in clubs, nets and other local organizations personalities get
in the way of results. In 30+ years in ham radio, I've been in a few such
situations. That's unfortunate, but I'm not sure what the ARRL can do to
change human nature.

ARRL devotes a fair amount of resources to promoting ham radio. For example,
see: http://www.arrl.org/pio/ and http://www.arrl.org/govrelations/

But I disagree with your premise. It is absolutely imperative that we
defend against the threats to ham radio as they arise. The biggest "bang
for the buck" comes from targeting the problems, not from generalized
promotion. Both offense and defense (to use your metaphor) are important,
but the balance should be weighted toward defending against the known and
potential threats.

There are hundreds of such photos in the news stories and elsewhere on the
ARRL site. (E.g., http://www.arrl.org/hamradio.html) You do have to ask
permission to republish them, but that's not generally a problem.

That's good, Ryan. Believe it or not, we at ARRL really want to hear from those who are disaffected. In some cases, there's not much we can do to address their disaffection. (Those who are still angry about incentive licensing, which happened nearly 40 years ago, for example.) Sometimes it's because they aren't aware that their complaints are already being addressed by ARRL. Sometimes it's because we need to do a better job. And sometimes we just need to be slapped upside the head so we'll fix the problem.

> possible.

To reiterate the subject of my concern. Whether one believes the code test to be necessary or not the 20 wpm did take some time and did have the effect of insuring that VEs had some time and with any luck some respect for the hobby. Both the effort and respect had the effect of allowing the VE program to have remarkable success and for the most part no real pattern of scamming that the FCCs audit program could not handle.

It should also be noted as Burton said to Taylor, "Truth or Illusion. Is there really a difference".

So the possibility, probability I will leave to you, that it is possible for three reasonably intelligent souls to gun up on the Extra, become VEs, and ease the entry of the Velvet Jockstrap, Unit 199, and Loud and Proud, exists. And in fact it is reasonable to assume that there would be some pressure on our heros to do precisely that. The illusion is as bad as the reality.

So I would propose a requirement for a VE that he be an Extra for two years first. It is a simple decoupling move. Has exactly nada to do with code testing. It is simply a way to maintain the present situation in the face of elimination of Element 1. And something that a responsible organization, if indeed NCI qualifies as an organization, would do as a

matter of course.

How probable? There are any number of organizations, your church very likely among them and not too unlikely your radio club -- in fact any organization with substantial assets -- that have anti-hijacking provisions in their charter. It is not like I am proposing something really new, novel, and revolutionary.

Here again, the major effect is to take a little pressure off the newbie. This continues to be my major concern in this whole enchilada.

Please furnish a reference to back up your assertion, Dick.
There simply is no third state for ON/OFF Keying. If there
existed a third state, it would be called ON/OFF/FLOAT Keying
or ON/HALF-ON/OFF Keying or some such.

From the IEEE Dictionary:

"telegraphy - A system of telecommunications for the transmission of graphic symbols, usually letters or numerals, by the use of a signal code."

RTTY and PSK31 certainly satisfy the definition of "telegraphy".

"telephony - A form of telecommunications primarily intended for the exchange of information in the form of speech."

Dick, one would think an extra class amateur would know the meanings of "telegraphy" and "telephony" and show a modicum of technical comprehension.

Dick...

There is NO THIRD STATE!!! The operator adds the change of states (on to off... or off to on...) at certain times. A state is a condition at some POINT in time.

OOK IS BINARY!!!!

Rich

But what IS a valid comparison is the fact that most hams will not use
most of the knowledge tested on the writtens - particularly the
General and Extra writtens. In other words, most of those questions
are as "necessary" as the Morse test.

> > Are not the
> > writtens challenging to the point on causing "people to spend
> > considerable (for some) time with no real purpose" wrt some of the
> > questions?

That depends on one's background.

Speaking as someone with BSEE and MSEE, the technical level of the
current amateur exams is not very high.

Speaking as an Extra who passed the ancient secret tests all the way
to Extra way back in 1968-70, the tests are not that hard IF you know
a bit of radio.
>
> The written is a composite of knowledge. If YOU disagree with
> some of the subject areas...or questions, you are free to
> send comments to the VCs that create the question pools.

In other words, don't expect Bill or Carl to see or acknowledge the
obvious parallels between the writtens and the morse test.

Of course it is, you dolt!!! But radiotelegraphy is not! That's why it's
called
'OOK radiotelegraphy' by those hams too unexperienced to recognize it as
just "CW".

Source record: 30488

the one that was a joke.

But! Definitions aside, I must agree with Dick that there is something in the spaces between the dits and dahs. I am a slow CW operator. My dits sound like a good op's dahs.

So the human operator, who is a distinctly non-digital entity, must pick up information from the spacing between characters in order to translate from the received signals. We do not have an internal method of determining the timing of the signal, we take it from the spacing.

Digital is either 0 or 1

let us take a dit for "0"
let us take a Dah for "1"

What next? if there is only the possibility of sending 0 or one, then we have nothing else to send. If the system is binary, then there can only be long or short and nothing else. We gotta have the space, and that is the other thing we take information from. If you are truly talking digital, the space should be the "0"

Both of the CW pulses are in fact a logical "1". One is just longer in duration than the other.

People calling CW a digital mode are often trying to make it sound like something it isn't.

So rather than relying on a definition, tell me which is the 0, and which is the one.

Then build a "digital" morse sentence for me consisting of ONLY the long and short pulses. There can be no space between the pulses, because that is another piece of information. You can't do it, because the pulses would all run together and sound like one continuous sound.

One would think that the holder of an extra class license would know that
it is impossible to send information over a continuous wave. If it contains
information, it is not a continuous wave.

Yes, we know Dick, that the IEEE Dictionary is wrong and you are right.

Dick, we have pointed you to technical books and all you do is tear off
the covers. One would think that before showing the world exactly how
technically ignorant you are, you would at least crack open a book.

> dits sound like a good op's dahs.

By definition, there is 'space' in the spaces. OOK Morse spaces are multiples of the 'dit' timing, according to the ARRL Handbook. 'Dits' and Dahs' are elements which are marks in OOK.

> So the human operator, who is a distinctly non-digital entity, must

>
> Digital is either 0 or 1
>
> let us take a dit for "0"
> let us take a Dah for "1"

Nope, that's not right. 'Dit' is 010 and 'Dah' is 01110 with leading and/or trailing space-times as necessary. The intra-character 'space' is 0. The inter-character space is 000. The space between words is 0000000. 'Dit's and 'Dah's are elements and both elements are in the 'mark' OOK state. Everything except 'dits' and 'dahs' are in the 'space' OOK state.

> off several years ago.

How did that work? The Amazing Randi is one of my heroes.

Typical Randi trick:

Gets a psychology class to volunteer for an astrology experiment.
Members of the class (usually several dozen) are given detailed
confidential questionaires which they fill out and put in double
envelopes. Questionaires ask all about the person's birthplace, birth
method and date/time but almost nothing else. In a few weeks sealed
envelopes are distributed to the class, each containing a sealed
personalized description of that person's personality traits, based on
the person's horoscope. All through the experiment the subjects are
cautioned to discuss keep everything confidential.

Once the results are distributed, the volunteers are told to open
their envelopes and read their personality descriptions (but not share
them). They are then asked to rate, by a show of hands, the accuracy
of the descriptions. Invariably most of the descriptions are rated
"very accurate" or "accurate", with only a few "inaccurate" and almost
no "very inaccurate".

Looks pretty good for astrology, huh?

Then the subjects are told to exchange their descriptions. Turns out
that EVERYONE was given the SAME personality description, which is
vague enough and flattering enough that most people would like to be
described that way. The detailed questionaires are then produced,
unopened. The description was written long before "experiment" even

started.

Randi has done lots of other debunking. Great stuff.

This is gonna be another interesting RRAP traditionalists vs.
"new-wavers" brawl. Looks like it already is . . .
>
>
I think in the case of qsling contacts made in the big contests the
e-version qsls are gonna enable a huge boost in the response rates and
volume of qsls swapped. Which is good for those who care about
sending/getting qsls.
>
>
I'll take this opportunity thankew for the bandwidth to illustrate how
I think this is gonna work: I have a bunch of Huge Gun dx
contesters/buddies in The Club in this neighborhood to which many of
us Much Lesser Guns also belong going back decades. Been there seen it
all up close.
>
>
The Huge Guns have a massive problem with qsling. These are the guys
who make maybe 3,000 contacts per major dx contest single op times
four of those per year minimum. So in the limit they have up to 12,000
freaking qsls per year to deal with. IF they only get into four 'tests
per year. Several do 6-8 contests. They simply don't qsl, in virtually
all cases they gave it up years ago, there's no way they'll deal with
the work involved. It's not that they don't care, it's just an
overwhelming time-consuming clerical chore which nets them nothing in
particular. So the ignored incomimg cards pile up by the shopping bag
full in their shacks.
>
>

The expeditions and multi-multis have the same problem except much worse depending on how many people dig into the job. The expeditions do it, the domestic multi-multis usually don't. All of these guys are running logging software and if it's not too much of a pain in the ass and it doesn't cost and arm and a leg to upload their logs it's gonna happen and a lotta dx is finally gonna squeeze qsls outta these guys. This should be good if it's done right.
>
>
But there are a bunch of obvious exceptions. The mutitude of folk who still do paper logs and don't care if the ARRL doesn't accept paper logs or not. The dx which runs with paper logs because computers are unaffordable where they are, long list. So there's no way qsling can even approach 100% electronic processing & delivery even for casual ragchews within the U.S. and Canada. Paper qsls are not gonna be over by a long shot.
>
>
If in a contest or otherwise I snag a new one you bet I'm not about to depend on an e-qsl to get the confirmation. He's gonna get my paper card and an SASE or an IRC and I'll ship it direct first class mail. Plus a green stamp if he's on an expedition. (Hey Ed; will the ARRL system ship green stamps for me??) I have very close to a 100% return rate with this method and I'm not about to give it up just because there's some logs in some websites somewhere. Plus I get a kick when the mailman drops a real card for some piece of exotica thru the slot and I add it to my dxcc albums. Some ancient ham radio realities are NOT about to become "obsolete".

Cecil got all huffy, mashed his send key without thinking, and said:

> One would think that the holder of an extra class license would know that
> it is impossible to send information over a continuous wave. If it
contains
> information, it is not a continuous wave.

Apparently the ITU disagrees with Cecil. In their "Radio Regulations",
Article 4, they designate "25WPM Morse Code Continuous Wave
Telegraphy" as emission type "100HA1AAN".

Sunuvagun!

With all kind wishes,

de Hans, K0HB

>forming or operating at all. Thats when the Chippewa will stand up and claim
>the right to the air and skies above their reservations. For this to happen,
>someone has to complain to the FCC about interference.

Dewayne is a long-time friend and well-respected colleague and he is
on the FCC's Technical Advisory panel. A good portion, if not all,
of his project is being funded by the U S Government, and it is the
FCC itself that is advocating tribal responsibility for spectrum
utilization on tribal lands. Lots of US bucks are going into that
project.

Dewayne was selected to head that project because he is an
international EXPERT - in capital letters - on deployment of Part 15
networks on a non-interference basis.

Y'all do know that Part 15 devices can - and do - operate in the
various amateur bands on a non-interference basis. That's been a
done deal for many years.

No, the sky is not falling. A little knowledge is a dangerous
thing.

\According to three ARRL documents:
1. The Operating Manual
2. Message Handling -- FSD 218
3. ARRL Scout Handbook
"A Q signal followed by a ? asks a question. A Q signal without the ?
answers the question affirmatively, unless otherwise indicated."

Therefore, QSO means "Can you communicate with ____?" only when
followed by a question mark. Without the question mark, it means "I
can communicate with....," "I am communicating with...." To
communicate with implies understanding. The purpose of the ARS is
effective communication -- understanding.

QSL, on the other hand, with a ? -- QSL? -- means "Can you acknowledge
receipt?" The ARRL Scout Handbook indicates that a QSL (card, without
the ?) is to be exchanged to acknowledge a contact.

Further, the ARRL Handbook, in the chapter on operating, pretty
clearly states those distinctions and seems to lament the erosion of
QSL to a substitute for QSO -- that is, indicating that what was just
sent was received and understood. It seems that ARRL sees QSO as a CW
descriptor of whether or not communication is taking place or can take
place. Is "understanding" occurring? While QSL is a mechanical
confirmation of the receipt of the message -- not the understanding or
communication.

Is there a linguistic reason for this erosion? Veterans have indicated
to me that it probably stems from using Q signals on phone. That is,
did he/she say, "QSL" or "QSO?" "Sounded like QSL. QSL must mean 'I
received your message.'"

If this analysis is incorrect, ARRL should clear up the confusion. If
you and I disagree, I'm sure there are others who use them
interchangeably, or use them as I do or as you do (and one of us is
incorrect -- I'm willing to back down). Once they lose whatever
meaning they should have, they become ineffective abbreviations.

You and Dick are both right: You're right -- the RF medium,
the "physical layer" if you will, only has two states. Morse
code is meaningless on this level. Interpose a state machine
with memory in the process, thereby defining a higher layer,
and Morse code (or ASCII, or Baudot, or...) becomes meaningful
and Dick becomes 'right'. Also, the "states" of Morse code
become those of the state machine used to decode it.

Mr. Estrada is missing "the rest of the story". The hardware in question
consists of various "Part 15" devices, which already share our amateur
radio spectrum.

Well no wonder I'm not that good at CW, Cecil! All this time I've been reading dit's as a short character, dahs as long, and inter character spacing as a short paues, and word spacing as slightly longer pause. I put 'em all together and I understand it.

Pretty amazing that the people who developed Morse code knew that Dit was 010, dah 01110, etc.

Anything can be digital under your definition. A digital processing system might use your method to determine translation from Morse to text or even voice.

Humans most definitely don't process Morse code in digital fashion.

What is 000 in binary? or 000000? or do you mean that three 0's (or however many) are sent? Right there is a problem as as I figure it, nothing is sent during a pause, and I interpret the length of the pause and take it from there.

Can you send your message in 1's and 0's so that I can digitally process it in my mind?

>Dick, if it can be tristated, it's not OOK, by definition.

Would you call a device that either put out a logic 1 or was high-impedance a tristate device? What if a "tri-state" gate were used in such a way that it never went to a logic low?

>Please furnish a reference to back up your assertion, Dick.
>There simply is no third state for ON/OFF Keying.

In every reference I have seen, a "tri-state" device counts the high-impedance state as being tri-state. By definition, OOK has high-impedance as one of its modes. Can you provide any references to logic tri-state that uses anything other than high-Z as the third state? Is it called tri-state in any of its references?

>If there existed a third state, it would be called ON/OFF/FLOAT

If that was told to you by anyone on the ARRL staff, that statement was dead wrong! Saying that to a potential member would get a staffer in big trouble quickly.

>If this is the level of professionalism by the ARRL, I may as well hand in
>my license, as apparently they "run" amateur radio more than the FCC.

Not as far as I am concerned. The FCC, not the ARRL, should remain the ultimate regulator of the Amateur Radio Service.

Remember that the ARRL Directors typically have "territories" that cover a few states. These people are volunteers and I don't think there is enough time in a year for a Director to visit every club.

>As far as defense of Amateur Radio, I guess the ARRL may be doing a good job

>hell is the ARRL doing in offense, (to use the sports term)??

The League has brought a number of petitions before the FCC over the years. Some were even successful. They have managed to keep spectrum protection bills

before Congress for as long as I can remember. They are about to try to get Congress to move on CC&Rs, in the wake of the FCC's last refusal to do so. In my own work, I regularly work with manufacturers on RFI matters as "offense." The spectral notches in the HF ham bands in the VDSL standard, the Home Phone Networking specification and the HomePlug specification are due, in part, to the work done by ARRL.

> Positively promotion of amateur radio and education of the general public will get

>vent.

IMHO, the League is less complacent than it has been in years. Although I think there is still a lot of room to improve, I am, overall, pleased to see some of the things ARRL has done over the past couple of years.

I asked the folks in ARRL's Regulatory Information Branch. They tell me that it is legal to ID with American Morse.

As a minimum, perhaps American Morse could be an "unspecified digital code," permitted for use with certain restrictions that the modulation method be legal for the frequency in use and that the encoding method be publically documented. (That is how PSK-31 was released for use in ham radio.)

Sorry, had to snip this bad-boy for space : -))

I was running Morse-Academy a little while ago and set it 25 wpm. Since I've been working a lot of DX lately, it seemed a little slow. This got me to thinking after I had read Kim's post. We all have our little niches in Ham radio. I love CW, Kim hates it (or doesn't like it a lot). Kim loves emergency communication, I tolerate it because I think we should all give back to the ARS for the privilege of having a license. The idea of standing around with a 2mtr handheld and spotting WX is not exactly my concept of fun. I have a buddy who just loves to build QRP units. I would probably fall into a deep depression trying to solder those tiny components onto a board. I like to build wire antennas, he tolerates it. This is a wonderful hobby, full of exciting things to do with a wide variety to choose from. I guess sometimes we fail to see the beautiful trees because of the forrest.

What, if anything, is the ARRL doing about trying to rid the 10
meter band of the cb truckers who are taking over that band?

Just shows they are not very careful with their language. In reality,
there is no such thing as "25WPM Morse Code Continuous Wave Telegraphy".
To be technically correct, they should have said, "25WPM Morse Code OOK
Telegraphy".

The easiest way to visualize it is to look at the EPROM code in
repeater identifier electronics - all ones and zeros.

I'm not going to answer in the ARRL's name but the FCC is quite aware
of the problem and it's out of the ARRL's hands.

How much more taxes are you willing to pay to hire and train
sufficient FCC enforcement agents to get the job done right?

It's that simple.

As I said, Cecil ... perhaps the tests were "dumbed down"
when Dick took his Extra ... or was it the applicant? Something
was clearly missing when an "Extra" doesn't understand the
most basic fundamentals, like "OOK" has two states, the
definition of "telegraphy" (equating it only to manual Morse), etc.

I always said there was too much emphasis on Morse proficency
and not enough on technical proficiency and knowledge.

So you're saying that anyone who even just takes a code test can
consider himself a CW operator. Interesting point of view.

But the eQSL folks are offering it for FREE (that should
REALLY appeal to most hams.)

Yes, they do accept donations, but it would appear that their
main source of revenue right now is from sponsors.

It's perfectly free to go and pick up an eQSL that someone
has left there for you ... and there's no charge to register
so you can place them there either ...

I fully intend to send a donation to eQSL ... because
I will use their service. But if I didn't want to, nobody
is forcing me to pay them a dime.

So why *IS* the ARRL spending member $$$ to
essentially duplicate a system that already exists
and is essentially free (other than so ARRL can
charge for it and to maintain control???)

As a dues-paying member, I still have a problem
with the ARRL wasting my dues like that ...

(but Ed and some of the other ARRL folks do
good things ... so I remain a member)

Wasn't it Einstein who said "To the uninitiated, any sufficently
advanced technology is indistinguishable from magic." ?

Dick rejects reference works (and the work of great pioneers
in communications like Claude Shannon) ... therefore, I would
submit that he is "uninitiated" ... (ignorant, actually ... I was
trying to go out of my way to try to be polite, but "uninitiated"

doesn't convey the lack of understanding that Dick exhibits)
... thus, it doesn't take very advanced technology before Dick
can't distinguish it from magic ... and most people know how
a display of "magic" can strike terror into the hearts of those
who can't understand it ... :-)

I don't know much about it, so you would really have to ask Wayne Mills and/or Bernie Fuller that question.

I do know that the League will probably not make a lot of money at it, so it sure isn't the money. If the League was looking to control Amateur Radio, it could certainly do better than to try to do it via the LOTW. As I recall the few brief conversations that I had with Wayne about this, there are issues about security and verificatibility, but I really don't want to speculate on what those are. Bernie or Wayne may know.

>(but Ed and some of the other ARRL folks do

Ed, some impressive things have happened with the RFI program. Everyone will have a different opinion as to what the ARRL should or should not be doing. Just ask about CW - that should get a thread at least 50 deep! So, amongst all of us with our opinions, how many are actually doing something - other than complaining? Well, I let my membership drop for a while - and missed the QSTs, not to mention some of the news. So, I signed up for a couple of years. Too bad I'm no longer anywhere near being a teenager or I'd sign up for life membership.

Here! Here! Ed may become dismayed by my wholehearted agreement, but you hit the nail on the head with that one!

The ARRL Organization in this area is in just as bad a shape. At least, I consider it not-so-desirable. Our local hams (new *and* old) have no idea about local ARRL leadership, activities, goals, objectives, long-term plans; and there are no local information nets, etc. Maybe this isn't stuff that is generally done on a local basis--but it darned well should be in my opinion. And, whenever I have mentioned it--there's lots of resistance. The resistance may be valid: can't get enough people involved, too much politics, etc., etc. But, as an outgoing ARRL Field Representative, I can say that it is very frustrating when most of the questions I "fielded" were those of a general nature and not even all that specific to my specialty: emergency communication.

I don't submit this in the same light as a Vince Fiscus, or probably not even whomever KC8PMX is, but more as a true agreement that the local ARRL also suffers in this area. Heck, to ask anyone "in the know" around here why upcoming elections are never discussed and pushed on the air, it is because "we can't have ARRL Section leadership outside the Dallas area!" Goodness, how lame is that? Then, when you go out into the field, as I have many, many times, those in the rural area dread getting involved in Dallas area politics!

Anyway...

Kim W5TIT

Free does not necessarily equate to good or for that matter even decent. And it's not free when you factor in the costs associated..internet connections, printer, printer ink cartridges, paper, etc. I remember on one of the qsl reflectors some did a study and it comes out almost a wash ALMOST

Besides those who like to participate in collecting wallpaper (another one of your bug-a-boos) can't use eqsls for anything. I realize that you personally don't care, but there are many more that do.

For now, but wait till eqsls are accepted, then the fun begins as well as the subscriber fees

>
> I fully intend to send a donation to eQSL ... because
> I will use their service. But if I didn't want to, nobody

> is forcing me to pay them a dime.

Any no one is forcing you to, yet :-)

>
> So why *IS* the ARRL spending member $$$ to
> essentially duplicate a system that already exists
> and is essentially free (other than so ARRL can
> charge for it and to maintain control???)

For one reason is that the Eqsl people will not share their codes (if that be the proper term) so that the logging software people can incorporate a download feature. Instead, at least according to several LOG EQF and DX4WIN guru's, they are being asked for donations of several 1000's of dollars for the privilege of being allowed to download direct off the site as well and a "donation" per downloaded card. Certainly doesn't seem free to me, especially if I have to pay several times for a poor quality looking piece of ink jet piece of paper.

Besides Carl, you don;t seem like the DXCC type, at least from reading your posts about fast beeping crush em type things. The DXCC program is attempting to be self sufficient so what does it matter to you whether or not the ARRL charges for this program. It already does so now, all you need to do is look and you'll find the schedule of fees. Seems to me they are trying NOT to use members $$$$'s to run this program.

Do you complain about the costs of the incoming and outgoing bureaus as well?

>
> As a dues-paying member, I still have a problem
> with the ARRL wasting my dues like that ...

see above. I have a problem with the government wasting my taxes on billion dollar bombers that can't fly in wet weather (B2) :-)

>
> (but Ed and some of the other ARRL folks do
> good things ... so I remain a member)

I'm not sure, but seems like a backhanded compliment to me. But Ed is pretty funny at hamfest, especially when he sets his tie on fire showing "proper" soldering techniques

Besides why is the ARRL spending some much of its members $$$'s on running these technical labs and such. There are many people outside the league that could certainly do alot of this work for far less (no offense Ed, making a point) Why spend so many dollars trying to allow hams to raise towers wherever they want. My community has no problem with towers..waste of ARRL $$$'s if you ask me.

See, the point is, you state opinion as fact when in fact it's just opinion.

BTW, I have a great EQSL card, for 160meters with amnateur station P5/WA6VSE when he was QRV North Korea. Beautiful colors and everything. No problem whatsoever in downloading it and printing it on nice card stock. Copies are available.

Hey, the squeaky wheel gets the grease. I may be wrong, but it seems to me
that most of the ham community isn't all that involved in the
"what-will-bes" of ham radio. If there's a group of highly actionable
people who have a common interest who get together and want to see their
ideas come to be, why should they be interested in being sure they also
"help" the silent majority? Maybe more people ought to perk up and get
involved. If they don't, *why* would one care?

If the vast majority of "hams of all licenses classes disagree" then they'd
best start disagreeing with an effort--*if* there are actionable people out
there moving in the opposite direction.

It isn't NCI's job to listen to it. NCI is a group of people who are of like mind, working on a project for ham radio that *they* see as worthy. If there is opposition, then the opposite side needs to get busy.

> >
> >Indeed, we have directed many of the written arguments filed by NCI

Just the opposite. It's quite possible to do so. I know a station that does it all the time, and it's paid for by tax dollars.

>If it contains
>information, it is not a continuous wave.

Not true! But you gotta define "information". I say it's "that which is not known at one end of a communications link". For example, if I don't know the exact Dow closing number at today, and you somehow transfer the number to me via a communications channel, then information was sent from you to me that I did not know beforehand.

Heh heh. Mine neither. It's when you've got your hand on the steering wheel, three radios and a scanner going, in the pouring down rain/hail, and the challenge is to stay the Hell on the road, in the dark, with your headlights reflecting back the light that won't penetrate that sheet of light in front of you...LOL...what a rush...and ham radio gives me perfect reason to be out there. (Prior to ham radio it was always difficult to say just *why* I was out the night before in that awful [beautiful] storm). :)

> I have a buddy who just loves to build QRP units. I would probably

1131. eqsl vs lotw

Newsgroup: rec.radio.amateur.policy
Date: 2002-01-11 01:34:33 UTC
From: Jay <spambotsrnot@allfun.com>
Message-ID: <MPG.16a85167f1968bc1989691@news.earthlink.net>
Source record: 30539

Very simple. One is for the exchange of qsl cards the other allows the downloading of logs for the purposes of DXCC submissions and such.

from their website...Our position is that there is room in the amateur community for both LOTW and eQSL.cc to coexist. We believe that the systems will be used as follows:
eQSL.cc: Hams and SWLs, as a method of exchanging QSL cards and to participate in our awards and contests,
LOTW: A subset of hams who are primarily interested in helping others earn DXCC

Since Carl is not a dx'er, by his own admission, the DXCC program is of no interest to him and it is doubtful that the ARRL software will serve any useful purpose to him. The costs incurred are for the most part carried by those that participate. Carl is not one of them

Since eqsls won't be allowed, in the conceivable further, for submission for ANY type of awards (since Carl doesn't seem to think they fit in the ARS, they are non existent anyway ;-)), then most DX types won;t use them for DXCC and award purposes.

From their website..(Note that, again, we do not believe award-granting organizations will be willing to accept eQSLs electronically in the foreseeable future,

As stated by the eqsl website

Patent Pending on most aspects of the eQSL.cc technology. If you find another on-line QSL card exchange similar to ours, let us know. It is probably infringing on our patents.

so that precludes any other types of eqsl retrieval. In fact there was another formed and they were sued out of existence by the eqsl people.

Some have said live and let live, there is room for everyone. I would humbly suggest that the most outspoken person here realize that and quit your grousing humbly requested

Jim,

All your comments and efforts (along with a number
of other people's efforts) are directed (IMHO)
at trying to do anything to get NCI to back off.
The idea of a VOTE is nuts because if such was even
thought to hold merit, the FCC would have followed
such a path. Code testing as a part of international
regs is going...even the ARRL supports that now.

Once the treaty changes, the issue becomes the individual
decision of each administration. You can then ask the FCC
for a vote. Will NCI support a vote...I sure wouldn't
because the issue is NOT a matter of the opinion of
only already licensed hams...it is a public policy matter under
the jurisdiction of the FCC. I suspect (IMHO) that you
and others are not at all pleased that NCI came to the
regulatory arena, learned the rules and the processes,
and, are continuing to play a role in influencing the

future rules changes. IF we (NCI) were truly of
no consequence to the end result, then I am truly amazed
at the efforts being made in this forum to get us to
back off.

Cheers,
Bill K2UNK

THE purpose of NCI is to end code test requirements.
Interesting that in the few occasions that NCI also commented
on an issue that didn't involve code, you'd think we were
guilty of heresey to see some of the anti-NCI comments.
Damned if you do, damned if you don't. The NCI "prime

directive" remains the same.

There are many similar organizations trying to do all
sorts of things. What specifically do you want NCI
to do or to tell you?

> >Me thinks
> >you are more unhappy about the ability to do so, rather than
> >the fact that we exist at all.
>
> Is anything I wrote in the previous post not true?

Nope, but none of it should be of any concern to those
that believe NCI is of no importance and/or holds
no crdibility as to our comments when we give comments
to the FCC.

> >> When I first looked on the NCI website, there was a statement that NCI

How about getting congress to cut the "pork" spending first, and apply the
savings to an increased enforcement budget?

Bull!

NCI has NO problem with a vast array of different
ways people use and enjoy amateur radio. NCI is
an organization with a purpose. YOU are free to join or not.

But no amateur is forced to operate.
>
>After "novice enhancement" as tech+ if I wanted
>to use 80m, 40m, or 15m ...

Yet Techs have had all privileges above 50 MHz for many years. The code test
for Tech has never been more than 5 wpm.

If any US ham wants to use 160, 20, 17 or 12 meters, he/she must take more
written tests than are required to use 6 meters and above.

Ryan,

Please don't let that one bad experience turn you off to the ARRL. Yes, that
sort of behavior by a person who is supposed to be in customer service is
inexcusable.

I've been an ARRL member for 34 years now, visited HQ, held field appointments,
been published in QST, met both Hq staff and field personnel, and I can tell
you that sort of thing is contrary to all League policies.
>
>If this is the level of professionalism by the ARRL, I may as well hand in

Several organizations have come and gone. They never get very large or organized because of enormous amount of work and expertise required to be a general-purpose amateur radio organization.

Being a CW operator requires RF. A person taking the exam is
performing a Morse code operation (decoding) using audio
frequencies.

A continuous wave has unchanging amplitude and phase, i.e. no modulation.
The only bit of information available from such a wave is that it exists.

You'd think a dingaling who claims to have been a ham for 50 years, an extra lite yet, would know why it has always been known as CW.

Oh, I know why it has always been known as CW, Dick, because it
doesn't decay like the original spark gap. But CW was misnamed.

From the IEEE Dictionary: "continuous wave - A carrier that is not
modulated or switched."

> to most hams.)

What Ed means is that the charge will be for the award that results from the QSL records, not for the keeping of QSL data on the system. So, no, eQSL.cc is not providing the same thing at all because they aren't providing the awards.

> It's perfectly free to go and pick up an eQSL that someone has left

> them there either ...

And nothing ARRL is doing will prevent you from continuing to do that.

> So why *IS* the ARRL spending member $$$ to essentially duplicate a
> system that already exists

What ARRL is implementing is not a duplicate of eQSL.cc at all.

> and is essentially free (other than so ARRL can charge for it and to
> maintain control???)

Yes, oddly enough, ARRL intends to maintain control of its own awards program. The participants in DXCC have made it perfectly clear that they expect ARRL to maintain the integrity of the program. And that's what will be done.

> As a dues-paying member, I still have a problem with the ARRL wasting my
> dues like that ...

The expectation is that the system will pay its own way.

They are devoted to pointing out the facts in this matter. Have I posted
anything in this thread that is not true?

>The idea of a VOTE is nuts because if such was even
>thought to hold merit, the FCC would have followed
>such a path.

NO. WRONG.

The idea of a vote or poll is simply to indicate what people's opinins really are. The FCC is not required to follow majority opinion. Saying that the idea of a vote is "nuts" sure looks like you don;t want to know what the opinion of the amateur community really is.

> Code testing as a part of international
>regs is going...even the ARRL supports that now.

They don't oppose it. Neither did the ARRL BoD survey the membership or the amateur radio community on the issue.

Back in 1975, when the idea of a nocodetest license was first proposed by the FCC, ARRL sent out a detailed questionnaire to all members, then posted the results in QST. Nobody has done anything like that since.
>
>Once the treaty changes, the issue becomes the individual
>decision of each administration.

It's pretty clear what the FCC will do.

>You can then ask the FCC
>for a vote.

Won't make any difference to them.

>future rules changes.

I am not pleased at what I see as something that is not in the best interests of the ARS. I don't think the NCI folks are pleased that hams like me presented our views to the FCC and in this public forum.

Whether NCI or any group is really influencing the FCC on license test matters is a matter of pure speculation. Heck, the FCC quoted KENWOOD'S comments 11 times in the R&O.

> IF we (NCI) were truly of
>no consequence to the end result, then I am truly amazed
>at the efforts being made in this forum to get us to
>back off.

What efforts? Have I EVER said that ANYONE should "back off"? Nope.

If you think I have ever tried to get anyone to shut up or back off, just produce the posts of mine. They're all in google.

I haven't sniveled nor have I fretted. The so-called "concepts" you
posted are absolute crap unworthy of any radio amateur. They can't have
saved your ample butt. If you've spent two minutes discussing those
particular ideas, you need to aquatint yourself with a few books.

Well, there's the part where Rodney Dangerfield is intentionally funny.
The grins we get from Kim are entirely unintentional on her part.
At the moment, she is more like the Yuri Geller of rrap. Her junk
science is moronic.

>How does one appropriately demonstrate his/her's competence with cw in
>order to earn the privelege of using the mode without taking a code
>test?

Under the rules we have had for over a decade, people do not need to pass a code test to use Morse code on the air. In fact, the only code-only segments in Amateur Radio do not require a code test to use.

>Or if I elect not to run ssb why should I be "forced" to be tested for
>having any competence with the mode?

You can get every one of the SSB questions on all of the exams wrong and still be issued an Extra class license. You can get every one of the safety questions wrong and still be issued an Extra Class license. If you get 4 out of 10 of the Morse-code-content questions wrong, you cannot obtain any license past Technician.

I don't want to argue the definition of "forced" again, but I can clearly see the difference between the way Morse code is treated vis a vis the other operating/mode questions.

>Sure, ya can get deeper into the noise keyboarding with the likes of
>PSK31 and Pactor but there goes the simplicity and cost advantages of
>cw. Might as well dial up my ISP and jump into a chat room.

If the code test were removed at some future point, the above statement would continue to be true. It appears that you do not believe that the advantages of CW are enough to continue its use in the Amateur Radio Service. If the code test is removed at some future time, will you continue to tell people that no one will learn it unless it is part of Amateur testing, or will you start saying different things to encourage its continued use on the ham bands?

>See Squiggy that's not RADIO any more than your digital "simulated
>contesting enviornment" is radio the way hams do real radio including
>the contests.

You are right that Carl doesn't understand that the mode is the message when it comes to CW operation and that the difference between "real" Morse CW and what he proposes would be like the difference between a real love affair and a Star Trek Holideck fling.

However, developing such a system on HF WOULD be radio -- perhaps just the kind of technological development that we need more of in ham radio.

>We've had thousands doing it simultaneously mostly in the lower 50 Khz
>for decades with the oldest modulation scheme on the planet. Tune

>14.000-14.050 on Sunday morning during the upcoming ARRL cw dx test.

You would find stations stacked in there about 400 Hz apart, on average. That is about 125 simultaneous QSOs being heard at any given location.

>You're a troll who has tossed out enough techo razzle-dazzle bullshit
>to collect some witless groupies. Now go play with yer RADIO and best
>of luck with the dxing.

I know Carl personally, and although he and I do not see eye to eye on every issue, we both believe the other to be sincere. Carl may be wrong on some issues (heh!), but he does not post views just to stir the pot -- a conventional definition of troll.

Now, as to the razzle-dazzle, I have always been a bit disappointed that Carl has not found the time (made the time?) to get more done to bring some of that razzle dazzle into ham radio. I believe that he has the talent and knowledge to do so, and it is unfortunate that he has not. He has confidentially shared a few ideas with me, and, IMHO, they are good ones. I really hope that he can make them happen someday soon...

>Either the future of ham radio is in deep doo-doo or all the
>smoke & mirrors you digigeeks have been pumping is
>exactly that.

The technology being discussed is not smoke and mirrors outside of ham radio. IMHO, "real" radio technology is leaving ham radio in the dust, and that is very unfortunate. In the 1960s, I was a dumb new ham, but if I had taken the back off of a commercial transmitter of the day, I would have recognized what I saw. Could we say that today? Could we draw the block diagram of a spread-spectrum system such as the Nextel or any of hte other "razzle dazzle" high-tech devices that are being used by the general public? Some of the unlicensed devices operate on ham bands, and, for the most part, hams aren't using them. If all this doesn't tell us that something is wrong, what will?

>Which, the way I see it, apparently have no limits.

I quoted this a bit out of order, but only to finish by saying that I believe that ham radio has no limits. We can do virtually anything our unlimited imaginations can dream up. Let's let Carl have some fun with his new priveleges -- after all, he is in it for the fun of it, too, but a year from now, let's ask him what improvements he has brought to technology by virtue of those priveleges.

I will go so far as to put a lobster dinner on the plate (so to speak) that he will accomplish something by 1/1/03 that you feel warrants the lobster dinner. :-) (And Carl, if you cost me another lobster dinner, I will never stick up for you again.)

>A continuous wave has unchanging amplitude and phase, i.e. no modulation.
>The only bit of information available from such a wave is that it exists.

And to really meet the definition, it must have existed for all time, and continue to do so. By that definition, there is no such thing as a continuous wave, because all such signals came into being at some point. It its coming into being communicates information, as in "I will send a CW if the Dow goes above 12,000," then it is not a CW signal.

What good is a definition if it defines something that cannot exist?

From: "W5TIT - Kim" none@none.net

>The ARRL Organization in this area is in just as bad a shape.

I didn't mean to imply that things are always rosy, because they are not. I don't know which areas of the country are in good shape, and which are not, and I am sure there are others in your area that hold a view exactly opposite to yours.

I do know that in many areas, the Section Manager, or even Director/Vice Director positions, run unopposed. Maybe you could consider giving it a go! :-)

>Our local hams (new *and* old) have no idea
>about local ARRL leadership, activities, goals, objectives, long-term plans;
>and there are no local information nets, etc.

It sounds like you have some good ideas for improvement, Kim. You have every right to ask your Director and SM about his/her plans and objectives for the Division and Section, then to make their answers quite public.

> Maybe this isn't stuff that is generally done on a local basis--but it
> darned well should be in my opinion.

I agree, it should be done more than it is.

> And, whenever I have mentioned it--there's lots of resistance.

Have you mentioned it and offered to help?

>The resistance may be valid: can't get enough people involved, too much
>politics, etc., etc. But, as an outgoing ARRL Field Representative, I can
>say that it is very frustrating when most of the questions I "fielded" were
>those of a general nature and not even all that specific to my specialty:
>emergency communication.

Unfortunately, the staff in Newington (about 120 folks) cannot do it all from Newington, nor should they. I do not want to see all good things in ham radio coming from Newington, CT. There is a lot of good talent in ham radio and the fact that our ~650,000 numbers can get a lot more done than a handful of paid staff in Connecticut is one of its strengths. But those folks are all volunteers, and in my experience, although some volunteers have given so much of themselves that it brings tears to my eyes, there have to be limits. I don't know what the answers are to this one, Kim -- that is why I stick with RFI. At least I have a vision of how to make things better in that area. :-)

> Heck, to ask anyone "in the know" around here
>why upcoming elections are never discussed and pushed on the air, it is

>because "we can't have ARRL Section leadership outside the Dallas area!"

There is nothing in Part 97 that prohibits the discussion of ARRL section politics on the air. There is nothing in the ARRL bylaws that stipulates that your SM can only come from Dallas. The SM must be a resident of the section, meeting some age and membership requirements.

>Goodness, how lame is that? Then, when you go out into the field, as I have
>many, many times, those in the rural area dread getting involved in Dallas
>area politics!

That may be the crux of the problem, Kim. If no one is willing to step forth other than the folks from the Dallas area, I can assure you that the SM will always come from the Dallas area. . .

No, it's even simpler yet. The FCC can put money from its budget
into enforcement activities by eliminating its fat-assed
employees who have been sitting around for years doing absolutely
nothing. Examples? GS-11 "Public Service Reps" translate that
to Phone Secretaries. GS-13/14 Engineers who play with software
all day that was purchased with public funds and has no relation
whatsoever to the commission's mission. GS-14 Economists who
are still trying to figure out what their job is. GS-12/13 Enforcement
Specialists whose only "enforcement" activity is working all year to
enforce the security of their own position that it will not be abolished.
GS-12/13 "Software Developers" who buy commercial software, then
pass it off as their own creation in the name of job security.

The frickin' commission has so much pork in it that federal budget
cutters would slip on the grease all day everytime they tried to slash a
position.

"Oh, not the "Nobody should EVER make a buck or two off
of amateur radio, no matter how much work they put in or
how useful their product or service is." philosophy again ...
PLEASE ..."

Why is it not OK for the ARRL to recover their costs? Note that the only time users are charged by LOTW is when an award is claimed.

>As a dues-paying member, I still have a problem
>with the ARRL wasting my dues like that ...

"Oh, not the "Nobody should EVER make a buck or two off
of amateur radio, no matter how much work they put in or
how useful their product or service is." philosophy again ...
PLEASE ..."

I don't think it's a waste at all. And I've been paying dues a lot longer than you ;-)

>(but Ed and some of the other ARRL folks do
>good things ... so I remain a member)

Most members don't realize just how much ARRL does. Heck, if a Product Review saves a ham from just one bad purchase every couple years, membership pays for itself.

The key to the whole electronic QSL thingie is what it's used for. A confirmation that is not acceptable for an award is NOT the same thing as one that is accepted - if the recipient cares about awards.

No. More information can be extracted than just the existence of the wave. I do
it quite often, and have done so for more than 30 years.

Remember that in an earlier post I defined what I mean by "information".

Even with a call like W8FXJ? Send it in American Morse and it's the
same pattern as W6RLC in International Morse. Lots of other possible
combinations.

Yup.

Historic note: After WW2, when the 0 call area was added, FCC
specifically cautioned against using the American Morse long dash for
zero.

Hmmmm, something doesn't ring right here? especially when
one FCC field office recently spent $thousands$ of public funds
tracking down an offending pager co. that was interfering a local
ham radio repeater. When questioned by the local Congress
critter, the FCC hams, err, employees said The whole affair was
necessary and rationalized off spending all the tax by saying they
needed to check out some new equipment in a real world environment.
Ho HO, yeah, later, the FCC hams, err, employees, one of which is
local ham radio club El Presidente, were treated to some "environment"
at the local Hooters! Government vehicles, ham vehicles with six
ants. on each car, and the local Hooters as a backdrop, made for
several great photos! ROTFLMAO, another great photo for the
Album of Pork!

I would assume that if one is transmitting in International Morse, then IDs in American Morse, there would be a lot of confusion. Perhaps the converse it true. I only repeated what the guys in reginfo@arrl.org told me. Let's see how they deal with the nuance of your follow-up question. :-)

Sure, in that case, but I'm not going to visualize it in that manner to interpret Morse. Do You? Music and photograph can be represented the same way.

I cam in late on this thread, and would like a clarification. Are you talking about Morse code being digital by virtue of how it would be processed by a digital machine?

Or are you saying that it is digital because it just is?

As best as I can remember, Randi talked a friend into writting a book that was "channeled" through some spirit entity named Carlos. It was basically a rewrite what of Edgar Cayce had written years before, slightly changed so that it wasn't a complete plagerism (call it reverse engineering, if you want) The book was published and became a best seller. Randi then announced that the whole thing was a hoax. Yet, thousands of people still believed these "spiritual revelations" even after the hoax was made public.

There's nothing wrong with the definition. The point is that the wrong
words were picked for CW. Morse code modulation is not continuous. The
background radiation left over from the Big Bang meets the definition
of continuous waves, IMO. Another wave that meets the definition, IMO,
is a continuous wave that someone encounters and doesn't know when it
started or when it is going to end, e.g. light from the sun.

My memories of high school art class are a little vague, but I seem to
recall the teacher saying that if you combine colors directly across from
each other on a standard color wheel, you get the neutral color brown. These
two colors are complimentary of each other.

Of course.

> I came in late on this thread, and would like a clarification. Are you
> talking about Morse code being digital by virtue of how it would be
> processed by a digital machine?

Nope, I am looking at the definition of Morse code in the ARRL Handbook.
Everything is defined with respect to one 'dit' time, i.e. one bit time
in the same way that ASCII is defined with respect to one bit time.

A 'dit' equals one mark bit with a preceding and succeeding space bit.
A 'dah' equals three mark bits with a preceding and succeeding space bit.
An intra character space equals one space bit.
An inter character space equals three space bits.
The space between words equals seven space bits.

When I was a teenager, the price of a life membership was way more
than I could afford. I also subscribed to Ed's philosophy way back
then.

So far I've spent more than a life membership would have cost!

The point is that a demonstration of manual proficiency is
unnecessary as a condition of licensure ... those who want
to use the mode will learn it ... in fact, back in my novice
days, I remember quite a few folks with REALLY bad "fists"
and who asked for LOTs of repeats ... they learned by
doing ... what did they hurt? No difference today ...

> Or if I elect not to run ssb why should I be "forced" to be tested
for
> having any competence with the mode?

There is NO test of operating proficiency for SSB or
any other mode ... only a requirement, in the written
tests for some technical understanding of the principles
of the various other modes ... why should Morse be
any different? Answer: "It shouldn't."

I certainly DO know how to use Morse ... I'm not very fast because
I choose not to use it because it's not my thing, but I do know how.

> Which is YOUR loss. Don't believe for one second that the PCTA bunch
> is gonna sit still while you work at pulling the cw mode any further

Huff and puff ... the "PCTA bunch" have already lost the war.
Morse testing will go the way of the dinosaur at WRC-03.

> Sure, ya can get deeper into the noise keyboarding with the likes of
> PSK31 and Pactor but there goes the simplicity and cost advantages
of
> cw.

Assuming you already have a PC, all that's required for
most of the digital modes these days are a simple interface
(easily built) and some free software you can download.

Where's the (alleged) "cost penalty" in that???

>> Might as well dial up my ISP and jump into a chat room.

Can't you see the advantage in being able to do it with
RADIO and enjoy the freedom of being untethered from
the telephone network (and the survivability of not being
dependent on that infrastructure when disasters strike ...

> > (To which

> "Channel." Boink: There it is again. You'll never get it. 'Nother
Tech

> cum HF The Easy Way.

"channel impairments" is a technical term relating to things
like multipath, selective fading, etc. which degrade the
propagation "channel" ... if you had a clue (or knew where to
borrow one) you'd know that it has nothing to do with "channels"
as in, for example 2m FM, where "fixed channelization" is the
normal practice ...

[snipped some irrelevant ranting about Sony PlayStations]

> See Squiggy that's not RADIO any more than your digital "simulated
> contesting enviornment" is radio the way hams do real radio
including
> the contests. All you're proposing is a particularly lame shadow of
> Internet Playstation interconnectivity using the HF radio spectrum
> instead of the fiber optic network. Lead balloon.

No ... you still don't "get it" ... and probably won't, but Gary
and I were tring to stimulate some thought on how things
could be done better and more spectrally-efficiently, so that
out bands would be better utilized, have less interference,
and be even more capable of supporting the increased
numbers of hams that will likely be needed to hold on to the
large amounts of spectrum we currently have allocated to us.

[deleted the rest of the "don't get it" rants ... it's clear that
Mr. Kelly will forever be unwilling to accept or recognize
any advantages in anything more modern than manual
Morse ... I wish him all the enjoyment of his beeping]

That's another significant problem ham radio faces, Cecil ...
hams full of technically incorrect missinformation, who thump
their chests and insist that that missinformation must be
propagated forever through all generations of hams in the
name of "tradition."

remember on
> one of the qsl reflectors some did a study and it comes out almost a

> wash ALMOST

Most already have the internet connection, printer, etc. So,
the only cost involved is the cost of the consumables (paper
and printer cartridges ... I think that pales by comparison to
the cost of printed cards, plus postage, envelope, SAE,
green stamp, etc.

> Besides those who like to participate in collecting wallpaper
(another
> one of your bug-a-boos) can't use eqsls for anything. I realize
that
> you personally don't care, but there are many more that do.

As I said, I've already received some very nice looking
eQSLs ... printed on a reasonable quality printer, they
would look just as good on the wall or in a scrapbook
as any "conventional" QSL card ...

> > Yes, they do accept donations, but it would appear that their

That doesn't seem to align with the facts as I know them.
eQSL uses the "adif" file format for data exchange. Many
logging programs (commercial, shareware, and totally free)
already have this import/export format supported (the one
I'm using does, and there's a fairly large list of others on the
eQSL site if you look.

(BTW ... remember ... I have NO interest in eQSL of any
sort, other than being (at least at tentative) user ...)

But the intent is to NOT accept eQSLs from those who choose
to use that service ... with what appears to me to be a trumped
up "concern for security" excuse to maintain control over the
electronic QSL distribution process at the ARRL by using,
what could be viewed as "monopoly power" over the awards
process ...

> > It's perfectly free to go and pick up an eQSL that someone has

No .. the ARRL just refuses to acknowledge eQSLs as "valid" QSLs.

> > So why *IS* the ARRL spending member $$$ to essentially duplicate
a
> > system that already exists
>

> What ARRL is implementing is not a duplicate of eQSL.cc at all.

to
> > maintain control???)
>
> Yes, oddly enough, ARRL intends to maintain control of its own
awards
> program.

I'm not taking issue with ARRL maintaining control over the DXCC program, as an example ... what I'm taking issue with is the apparent intention to use that awards program as "leverage" to create some sort of "monopoly dominance" over the electronic distribution of QSLs.

> The participants in DXCC have made it perfectly clear that they
> expect ARRL to maintain the integrity of the program. And that's
what will
> be done.

And the "integrity" of the program could, IMNSHO, be maintained just fine, while still copperating with and not "shutting out" the eQSL folks.

Ed ... that's the issue as I see it ... "freedom" (of choice) ...

I'm not suggesting AT ALL, that either electronic QSLs
or paper ones should be the ONLY way ... all I'm questioning
is the ARRL's apparent attempt to "muscle out" the eQSL
folks by not cooperating with them and refusing to accept
any electronic QSL form other than one run by the ARRL
as being "valid."

That's where I have a problem ... philosophically
and as a member, since I'm not that interested
in awards ...

It's the idea that the ARRL appears to be attempting
to "freeze out" the eQSL folks (who have a working
system now) by refusing to acknowledge anything
but LOTW as being a "valid" QSL ...

1194. ARS w/o S25.5 Proposal Proposal

Newsgroup: rec.radio.amateur.policy
Date: 2002-01-11 17:15:55 UTC
From: Richard Plourde <rplourde@att.net>
Message-ID: <f5F%7.349506$W8.13212759@bgtnsc04-news.ops.worldnet.att.net>
Source record: 30753

* * * A R S P R O P O S A L P R O P O S A L * * *

When S25.5 is deleted the FCC will most likely drop any requirement for Element 1, so here is the framework, I believe, we will have to work in for proposals in the future.

First, a list of 'virtual' facts; these will be the basic guidelines for all future proposals...

Rule 1) Existing licensed operators will not lose, and not gain, any operating privileges without earning the change.

Rule 2) When there is any ambiguity in proposing changes to the Amateur Radio Service refer to Rule 1.

Therefore, all existing operator privileges can forever remain, and will always have the option of renewal, with the privileges presently in effect. This implies that everyone and everything is grandfathered.

In order to build a consensus for a proposal the preceding should be bought by the proponents.

Going forward... proposing a new structure, with new qualifications, for obtaining new privileges is fair game. Although, leaving the existing structure untouched is imperative for realizing a successful proposal.

I think, three license classes is fine; reorganizing and even totally revamping the three examinations is well within these parameters. We have discussed this back in 1999 and is well worth revisiting here.

This is only to demonstrate where the emphasis should be.

Element 2 should have at least,(and I want all of)the FCC rules, operating procedures, Amateur Radio practices, and RF safety. The emphasis is safe proper operation.

Element 3 should have at least antennas and feed lines, signals and emissions, radio wave propagation, and circuit components. The emphasis is safe MF/HF worldwide operation.

Element 4 should have at least electrical principles, practical circuits, and VE procedures. The emphasis is highly competent to safely 'Elmer and/or pursue the full hobby.

Also, we restrict power for any new licensees with Power Endorsements. Power Endorsements given when General or Amateur Extra privileges are granted rated for medium or high power respectively. This implies Technician privileges include a Power endorsement of low power. Existing licensees

would be granted High Power endorsement.

Lastly, the VE questions could be broken out to a separate examination which would allow Element 4 to be more technically oriented.

What say you????

Rich

Yep. But a few observations:

- If you found several kHz of open space it wasn't much of a DX
contest
- You remember that incident in part because it was unusual
- The dummy who told you to go somewhere else obviously assumed nobody
else was listening. BAD assumption.
- One incident like that can make the whole ARS look bad to nonhams.

I looked it up.

http://www.snopes.com

search on "randi carlos" and it should come up

Briefly, Randi trained a 19 year old man to "channel" the alleged 2000
year old spirit of "Carlos". Taught him a few tricks like how to make
it look like your pulse has stopped. "Carlos" had all sorts of public
appearances and was welcomed by the media. Finally Randi and the young
man admitted it was all a fake and a hoax.

One of the things I find interesting is that at every appearance and
interview, "Carlos" handed out information and references that, if
checked, would have quickly revealed the hoax. But the media folks
NEVER checked any of it, they just accepted what they saw as real. In
addition, as you say, amny continued to believe after the hoax had
been announced!

Of course people believe all sorts of things. Consider "creationism"
or "creation science" (that's an oxymoron if ever there was).

> having enough knowledge to know the difference ...

Although I've made my fortune in "knowing the difference", I wanted
to bring out the notion of "awe and wonder". That's what ultimately
brings "human-ness" into the equation. You really should read
Clarke's "Childhoods End" and "The 9-Billion Names of God".
Maybe it will soften the technocrat side of you.

Sure.

The point is that if all one hears/decodes is the ID, and it's in
American Morse, it may not be clear that it really IS American Morse.

If it's legal, repeater IDs could be in American Morse.

> to cause it to be discontinuous.

Not at all.

Consider WWV. Most of its transmission is simply an unmodulated carrier. Yet from that carrier I have frequently obtained standard frequency information by
zero beating an oscillator at my station with the carrier from WWV. That's how I adjusted my 100 kHz standard, BC-221/LM freq meters, and do drift runs on VFOs under development.

The information transmitted from Fort Collins/Boulder to my station is the exact frequency, to a higher degree of accuracy than is available here.

There are other uses:

- By counting an unmodulated carrier of known frequency, standard time intervals can be determined.

- Several widely separated transmitters and/or receivers can be synchronized in time and frequency by means of an unmodulated carrier on a different frequency than that of the synchronized equipment.

Now before you start quoting dictionary verbiage, Cecil, recall that several posts back I defined what "information" means in this context. I have demonstrated that information can be transmitted by an unmodulated carrier.

Cecikl liks to twist things to fit his Agenda du Jour. He knows there are metods of operating a repeater IDer which have nothing to do with binary encoding of EPROMs. I built one over 25 years ago which used diode programmng that was strobed with a decoder which turned an oscillator on when it "saw" a diode and back off when there was none. By no stretch of his very active imagination could this device be considered "binary code programming" but I have no doubt he'll try. Of course the output was binary - bi-state, but not binary coded. He deliberately fails to note the difference. And of course the "third state" involved in radiotelegraphy is the intelligence transferred.

Side note: There are many electrical engineers, IEEE members, who strongly disagree with many difinitions found in the IEEE dictionary. Cecil bought his copy strictly to use to bolster his trolls here on rrap.

Balderdash, you dippy IEEE troll. The term Continuous Wave was chosen because when keyed an oscillator circuit supplies RF waves of continuous amplitude, unlike the fast diminishing "damped" waves of the previous spark transmitters. You know that fully as well as I, you just use dictionary definitions to try to confuse the poorly informed. Shame on you, you digigeek troll extriordinaire.

A life membership (used to) cost 20 years' current membership.
Invested properly, the interest pays the "annual dues".

The worst practice in the enforcement business is to use penalty
money ("fines") to fund the activity. That leads to sloppiness and
corruption - look at "the war on drugs" for an example. Much as I
hate to see the money go there, the "general fund" is still the
most honest place to put it.

For real numbers, each enforcement agent runs about $100,000
annually (salary, support staff, equipment). That's not spare
change.

Wrong, Dick...

You've programmed the circuit with diodes and that, Carroll, is binary. How can "binary - bi-state" not be binary coding.

What you call you decoder was, in fact, the encoder. The strobe was defining the state (on or off) for the predefined time period. The information going, from your encoder, to your oscillator was binary encoded serial data. Some binary representations follow for your edification...

1/0
on/off
true/false
high/low
diode/empty

Calling radiotelegraphy the third state doesn't make any sense at all... could you explain that one to me, please?

Rich

I don;t think most have Internet connections or for that matter
computers. Printed cards are less per 1000 than 1 months internet
service, and most hams utilize the buro so the cost for shipping is
pennies per card, certainly less than the cost of ink and quality glossy
paper. Like I said, it's close

BUT for the people who collect wallpaper, they're worthless except as pretty pieces of paper. The people who collect wallpaper aren't concerned that they are pretty as long as they are accepted by the award entity that they submitting to and so far, unless I am wrong, there isn't one major award that accepts the DXCC, WAS, VUCC, WAZ, WAC, IOTA, etc etc all do not accept so having a reasonable quality printer is moot.

The same that they charge for submitting for DXCC programs. Nothing different, it allows the program to exist without pulling $$$'s away from the rest of the programs. Something you seem to care about. If the program is virtually self suffcient and you are not part of that program, why all the hub bub BUB?? I don;t recall..did you gripe like this when the DXCC program upgraded their computer system several years ago? They started charging increased fees for submissions to help cover the costs. There's no difference now, so why all the hand wringing?

I was making a point. I benefit from none of these so why waste members money on them. You seem to say the same thing about the DXCC program LOTW and yet when I say the same thing I am wrong?? Not quite sure about the logic in that

>
> > BTW, I have a great EQSL card, for 160meters with amnateur station

Of course it is, and it's not alleged it's very much real. You are sitting there operating the SSB station and in the background is Romeo, operating the CW station. A very nice qsl card if I do say so myself. A complete and utter forgery, but if I submit to Eqsl, I can input a bunch of amateurs callsigns and they can all have a P5 contact confirmed.

Why do you simply dismiss the stated purposes of Logbook of the World
(e.g., the concern for security and integrity) and make up a motive
("maintain control over the electronic QSL distribution process") that
doesn't exist?

You may not agree that the process needs a better level of security.
Others do, including many if not most active participants in DXCC.

>> And nothing ARRL is doing will prevent you from continuing to do that.
>
> No .. the ARRL just refuses to acknowledge eQSLs as "valid" QSLs.

So? You can get a lovely QSL image from eQSL.cc and an award credit from
LOTW. What's the problem?

>> What ARRL is implementing is not a duplicate of eQSL.cc at all.
>
> And just how is it so strikingly different? (Seriously, educate me
...)

Wait a minute... you mean you're making all this hooraw without first even
bothering to find out how the systems are different? That makes it kind of
hard to take you seriously, Carl! Anyway, one significant difference is
the use of cryptographic techniques to validate the source of QSL
information. (I would think that someone who PGP-signs his Usenet postings
would understand the value of digital signatures.) Another difference is
that the system will eventually be tied directly into the back-end awards
system.

> I'm not taking issue with ARRL maintaining control over the DXCC

> intention to use that awards program as "leverage" to create some sort

> of "monopoly dominance" over the electronic distribution of QSLs.

The ability to validate the source of QSL information is fundamental to control of DXCC. It has nothing to do with "leverage." So, yes, you ARE taking issue with ARRL maintaining control over DXCC, even if you don't realize you are.

And as for "monopoly dominance," that's absurd. LOTW is not eQSL.cc. Those who want traditional QSLs electronically will no doubt use eQSL.cc to get them. (I suspect, though, that Hans' point of view is fairly widespread. As keepsakes, eQSLs are probably unappealing to a lot of people.) The only thing ARRL has "monopoly dominance" over is its own awards program. Just like CQ has "monopoly dominance" over its awards program. Just like RSGB has "monopoly dominance" over its awards program. (BTW, neither of them accept eQSLs either, AFAIK.)

>> The participants in DXCC have made it perfectly clear that they expect

> folks.

Carl, you seem to have little understanding of the history or the present state of electronic confirmations and awards progams. In short, your NSHO is based on sheer ignorance of the subject. Sorry to be so blunt.

Jon

Schoenbohm Effort to Obtain New Amateur License Prompts FCC Hearing Order

NEWINGTON, CT, Jan 11, 2002

Former Amateur Radio licensee Herb Schoenbohm, ex-KV4FZ, apparently is eager to return to his
favorite pastime. The FCC this week suggested that Schoenbohm, who lives in Kingshill, Virgin
Islands, won't get his wish easily. Last April, only a few months after losing his battle to renew
his ham ticket and his operating authority had expired, Schoenbohm applied for a new Amateur Radio
license and passed the General exam. The FCC now has designated that pending application for
hearing, to determine, in part, if Schoenbohm is rehabilitated and deserves to be a Commission
licensee.

The FCC didn't mince words in its Hearing Designation Order, released January 6 in WT Docket No
01-352. Schoenbohm's "previous criminal behavior, misrepresentation and lack of candor warranted
denial of his renewal application," the Order said. "Mr. Schoenbohm is a convicted felon and was
found to have misrepresented facts and lacked candor in his testimony in that hearing."

The FCC said, however, that what's past is past, and it does not intend to rehash Schoenbohm's
earlier case in the current proceeding. Now, the Commission says, it must determine whether
Schoenbohm "has been sufficiently rehabilitated" since his earlier "disqualifying behavior." The
Commission said it needs to know if Schoenbohm "could be relied upon to observe our rules and
policies and deal with the Commission in an honest and forthright manner."

The FCC said that since it has "no facts now before us that would support a finding of
rehabilitation," it cannot make a ready determination that granting Schoenbohm's application
"would serve the public interest, convenience, and necessity." So, it's designating his
application for hearing.

"Absent a demonstration by Mr. Schoenbohm that he now possesses the requisite character
qualifications to be a Commission licensee, his pending applications may not be granted," the FCC
added. Schoenbohm vowed last year to return to Amateur Radio.

Meanwhile, the FCC is continuing to investigate whether a South Carolina amateur broke any rules
when he let Schoenbohm operate during a recent contest. Stephen S. Reichlyn, AA4V, rented and
operated from Schoenbohm's station during the CQ World Wide SSB Contest last October.

After the FCC was alerted to the operation, Special Counsel Riley Hollingsworth wrote Reichlyn
requesting clarification of Schoenbohm's role. FCC rules consider an unlicensed individual who
communicates via Amateur Radio to be a third party and require that a licensed control operator be
present at the control point, "continuously monitoring and supervising the third party's
participation." Such a third party also may not exchange messages with stations in countries with
which the US does not have a third-party traffic agreement. That list includes the UK and most of
Europe.

The FCC also may consider how its refusal to renew Schoenbohm's license affects his legal status
as a third party. An individual whose license was revoked or suspended or surrendered for
cancellation following revocation, suspension or fine--or who is under a cease-and-desist order
relating to amateur operation--may not serve as a third party at an Amateur Radio station.

Reichlyn confirmed that he had asked Schoenbohm to fill in briefly as an operator on two
occasions. He said he fully supervised Schoenbohm's operation, but conceded in his response to the
FCC that he may have exercised poor judgment in asking Schoenbohm to operate.

The FCC said this week Schoenbohm would bear the burden of proof in the new license application
proceeding before an administrative law judge to determine whether he now possesses the requisite
character qualifications to be a Commission licensee and whether his pending application should be
granted.

------------------ CUT -------------

(Let me give you an "inside peek". The FCC knows that if
KV4FZ were *ever* to get back on the air, it would ignite an
RF firestorm on 20 meters that would make the "old days"
of the infamous 14.313 War look like a church cake and
tea party. Better hope that Herb never get's his US Callsign
back - that will make the top half of 20 meters look ten times
worse than the most vile CB channel you can imagine in
very short order. Rest asssured, they do know this too.....)

The only CW-only frequencies are available to nocode techs. The
FCC doesn't require any demonstration of competence there. In
fact, the FCC doesn't require any demonstration of competence
in ANY mode except CW below 30 MHz.

Dick, here's the IEEE definition of "continuous wave" again for your benefit.
When amateurs disagree with professionals, it's time for the amateurs to change.

"continuous wave - A carrier that is not modulated or switched"

CW uses a switched carrier. Therefore, CW is not a continuous wave.
Seems that CW must stand for Commutated Wave.

I don't doubt that you have done that, Jim, but in the process you disturbed
the energy in that wave and caused it to be discontinuous. And you necessarily
must be uncertain of the content of the part of the wave that you didn't disturb.

> Now before you start quoting dictionary verbiage, Cecil, recall that
> several posts back I defined what "information" means in this context.

But you have NOT demonstrated that information can be collected from
an undisturbed unmodulated carrier. How can you prove that the discontinuity
caused by your gathering of the information has not disturbed the wave and
the information gathered?

You've got to be kidding, Dick. You have just described the original
binary memory made out of diodes. So the oscillator is turned on when
it sees a diode and turned off when it doesn't see a diode. You no
doubt have a bit clock that steps through the diodes. That is exactly
binary code programming, Dick. How many states does a diode have?

> And of course the "third state" involved in radiotelegraphy is

To bad you don't have any to transfer. Please produce a reference that
indicates that the intelligence transferred in radiotelegraphy is some
"third state". You are so full of it I have type with one hand while
holding my nose with the other.

>
>What say you????

I think that there should be 3 license classes but split them up differently:

- VHF only (maps to the current technician w/o HF class).
- HF only (based on the general theory)

These two can be combined to have a HF+VHF (mapping to the current general class). These two together would have all spectral privileges.

- Extra: For those who want to do things such as satellites (remember that only Extra's can have transmitters more than 50km up) and VE testing.

So, if one were to call these: A = VHF, B= HF, & C = Extra(satellite/VE), then the possible ALLOWABLE combinations would be:

A, B, A+B, and C. C would require both A & B, but A & B would NOT require the other. A+C and B+C would not be allowed on licenses.

Novice => Nothing (if no loss, then A-limited + B-limited)
Technician (no code) => A
Technician (w/ HF) => A (if no loss of priv's: A+B-limited)
General => A+B
Advanced => A+B
Extra => C (includes A+B, effectively = A+B+C)

The "A-limited" is the current 1.25cm + 23cm novice bands.
The "B-limited" is the current novice HF bands.

This assumes that these "novice" bands aren't removed from the rules. Since this thread started out with the removal of the morse code requirement, I have assumed its removal as well.

EXCEPT for making it possible to have an "HF ONLY" license, this isn't significantly different from our current license structure.

The problem (as I have always seen it) is that it *requires* the use of a computer and associated software to interface the technology with the radio. (and we all know what can happen to installed software when we need it most) It's bad enough that we have to have a deep cell marine battery to run the rig during emergency comms (those suckers are heavy) but now we have to lug around a laptop and a separate power supply for it as well. Don't get me wrong, I think advancing the radio technology is a wonderful thing and I'm all for it, but where does the dependency on additional outside equipment end? Next thing, I guess, is we'll all be toting mini sat-dishes. The more equipment involved, (and their inter-dependence on each other) the greater chance for one of them to fail and crash the whole system. That's (and you have to agree) one of the beautiful things about CW; basic equipment and ease of use. So, how do we balance one against the other? What are your thoughts, Carl?

From: "Phil Kane" Phil.Kane@no.spam

>A life membership (used to) cost 20 years' current membership.
> Invested properly, the interest pays the "annual dues".

That is pretty much how ARRL does it, plus or minus. To do otherwise would, IMHO, be fiscally irresponsible.

I am always amazed how many old time life members apologize to ARRL for their belief that they no longer pay their way. I hope they believe me when I point out that ARRL has been using the interest to fund their membership and to grow the investment. If one looks at an ARRL Annual Report (they are on the web page), one will see an investment account. That is primarily the invested dues of life members. The League has occasionally tapped into that for operating expenses, with the belief that its long-term goals should not be significantly impacted by short term financial ups and downs, but over the long run, it has to build that back up to continue to fund the organization.

Many of those I know who became life members did so because they got tired of having to renew all the time.

Whatever makes one happy is fine by me. And that includes those that choose not to be members. I can't see how any of the things that the Leauge has done that have honked me off over the years are more important than the things I believe are being done correctly to the overall good of Amateur Radio, but I can also understand that to be my own opinion. If someone truly believes that even a single wrong is too important not to overshadow the rest, that is their opinion.

Of course, I am always amazed at the people who are not ARRL members but email our tech guys for some advice on their station. :-)

>CC&R's. Big deal. Only does anything for homeowners. What about the many
>thousands of people that are not in a home ownership situation.

I apologize; I used the term CC&R too loosely. The ARRL's position is that hams should be able to put up at least the amount of antenna that is permitted under the FCC's pre-emption for broadcast-reception antennas. It might help us to better discuss this if you look at the various ARRL policy positions at:

http://www.arrl.org/govrelations/

>> http://www.arrl.org/hamradio.html

>Not for me, but for me to hand out to others to encourage them to consider
>the hobby.

That is the intent of the above hamradio.html page, but I do know what you mean. See:

http://www.arrl.org/FandES/ead/materials/

And this is one that was actually found on the ARRL web-page index. :-)

I don't necessarily think Morse gets "through" better than any other mode in physical (propagational) terms. But the effectiveness of the mode over say, SSB under identical conditions is obvious. Good CW ops can distinguish a dit and a dah through some pretty rough hash. The same cannot always be said for SSB. We prove this every year at Field Day when the SSB side of the table is asking for repeats on callsigns and we're getting them the first time through. For example, let's say the Call AB5CD is received by a SSB station. Given some less than optimal conditions, that Call could be confused for AB9CD. If it was sent in CW, there would never be any doubt as to the call area (for example) because a 5 and a 9 are completely different sounds on CW. It's really not a myth, Carl. It's been proven time and time again to be a reality.

BTW, out of the hundreds of characters sent during the Morse exam, I ONLY had to get twenty-five in a row correct to pass. That made my (or anybody else's) odds for passing (...or not failing, depending on your POV.) much better than ANY written exam.

actually,
"we" don't have to treat you with anything more than minimum tolerance as
fellow human beings (and for some, thats even a stretch).

your continued p[rotests and proliferation of illicit and illegal
activities will be pretty much ignored, save those actions that cause
harm to other services (then the fcc or whatever other governmental
agency in whatever other country will step in and slap you a hard one).

granted, there are a few in the ham community that are bad apples (god
knows we have more than a few here in arizona), but that they should not
be used as examples of good operating ethics.

you wanna operate ham radio, get your damned ticket and quit whining!

Technomage

>but LOTW as being a "valid" QSL ...

You are ASSUMING that you know the ARRL BoD's motives. Have you talked with
our Director about this? Have you let the Board know how you feel about it? How
about the committee that sets the standards for awards?

Y'know, it's really getting surreal to see Carl arguing about what should and
should not be accepted as a QSL for award credit.

For as long as ham radio has existed, the paper "QSL card" confirmation has
been the gold standard of whether a valid contact was made or not. Electronic
confirmation must meet or exceed that standard. It's up to those who issue the
awards to determine what is acceptable and what is not. That's the CAC (I
think) and the ARRL BoD.

ARRL is not the only issuer of ham radio awards, btw.

From where I sit, it seems to me that the BoD and CAC must have good reasons to
institute LOTW, rather than simply accepting eQSLs for awards. Hq. has plenty
to do as it is, so they do not take on new projects lightly.

btw - what mode did you use to work that DX? Was it PSK31, Pactor, or something else?

Cecil,

How long will it last compared to running an HF radio solo? Just curious. I can run my radio off of the deep cell for about 18 or so hours before I need to recharge it. And, how long to recharge it using solar panels as compared to say a trickle charger. Sounds like something I might want to tinker with.

So far so good. I think the tests need a bit more integration. For example,
Element 2 doesn't need all the RF power safety stuff if the license only allows
low power. But the basic idea seems like a logical outgrowth of our earlier
discussions.

Now the second part - what privs go with what license/test?

I said it once already - check with ED HARE, that was his phrase which I just picked up, *understood exactly what he meant* and merely used again. If it is so wrong, then you idiots can come down on him for starting it off.

Of course what it means is that CW - you know, that well entrenched old mode that Real Hams(TM) use, must have an information state as well as the mandatory binary electrical states in order to function at all.
It is really amazing that all the dippy geeks here, liteweights all,. fail to catch any hint of a clue.

I couldn't care less what it says. It may be your bible as as digigeek, but most Real Hams(TM) will rely on the original definition that far predates any hint of IEEE.

Actually it was a shrewd plan. The investment keeps members paying dues on past
their demise!

Carl's (and NCI's) problem is that it has never been proven to him (them) For as we know, one has to prove it to himself, and he (they) just haven't done that..

Somehow the anticoders always act like every ham station will always have some late digital mode available when in fact most hams use HF rigs which have SSB and CW and nothing more. So having CW available as a backup is no more than logical. I guess that's too sensible for them.

> How long will it last compared to running an HF radio solo? Just curious.

I've never run it down. It should be relatively easy to calculate. My
laptop is fused at 2 amps and my IC-706 draws 2 amps on receive. As
always, it's the transmitter that eats up the power - up to 20 amps
for my IC-706 and 50 amps for my 500w amp on SSB. I don't run the
amp if AC power has failed.

> I can run my radio off of the deep cell for about 18 or so hours before I

> compared to say a trickle charger.

I've got 150 watts of solar panels on the roof ored with an Astron RS20M
into the marine battery using big Schokey (sp?) diodes. Everything runs
directly off the battery including my SGC 500 watt amp. I don't even
hiccup when AC power fails.

It is perfectly sensible. YOU can do as you please.
You can operate or be prepared for one mode, two,
three or whatever. The point is that even if YOU
want to have CW as a backup, that is not a reason
to mandate code testing.

Cheers,

The FCC does NOT poll the public or the licensed ham community.
The FCC opens a comment period to which interested parties can
file their comments. YOU want a specific "ballot" or opinion poll
sent out on the issue(s).

> > Code testing as a part of international
> > regs is going...even the ARRL supports that now.
>
> They don't oppose it.

Say it any way you want, the ARRL is NOT going
to take any roll in opposing the end of code testing as a treaty
requirement which means they will either cast a vote of abstention
or a yea vote on the issue to abolish.

> Neither did the ARRL BoD survey the membership or the
> amateur radio community on the issue.

Fine by me. I sent my opinion to my director.

> Back in 1975, when the idea of a nocodetest license was first proposed by
the

> It's pretty clear what the FCC will do.

Fine by me...assuming you believe they will drop all
code testing then for the USA.

> >You can then ask the FCC for a vote.
>

> Won't make any difference to them.

If so, then why should I care?

> > Will NCI support a vote...I sure wouldn't

presented
> our views to the FCC and in this public forum.

We really don't care much at all. I and, on occasion, some other
NCI folks routinely counter those comments anyway. I see no
shift in opinion or attitude towards retention of code testing
because of anything being stated in this forum or via FCC
comments.

> Whether NCI or any group is really influencing the FCC on license test
matters
> is a matter of pure speculation. Heck, the FCC quoted KENWOOD'S comments
11

WRONG! NCI loves the facts because when facts and rational
thought processes are invoked in looking at the need for
continued code testing, the testing goes away.

So you now want to end written testing, theory testing?
Take it to the FCC if you want. I and the most other NCI
BOD believe theory knowledge is good. I don't have to
defend that unless the FCC suddenly
wanted to change that. The FCC has already accepted the
idea that morse testing is no longer needed.

The parrallel doesn't exist...it is that simple. Disagree all you
want, the FCC doesn't see the parrallel either. They (the FCC)
are the ones you'd need to convince to change anything. The R&O
is almost 2 years old...NCI doesn't have to "see or acknowledge"
anything...and even if we did, so what...it would impact nothing.

Cheers,
Bill K2UNK

though.

I don't mean to say that a privilege couldn't be modified or more spectrum granted to a license class, only that a wholesale upgrade of a class is out of the question. You know the 'something for nothing' issue.

> >I think, three license classes is fine; reorganizing and even totally

Nope, the three classes relegated to limbo can stay there. They will diminish in numbers and if a privilege is changed or a subband edge is moved that's fine. Nothing need be done unless it becomes obvious a change is warranted.

> >This is only to demonstrate where the emphasis should be.

Sure and the new licenses take on the low, medium, and high power privileges of the license class; this sounds cleaner than additional endorsement documents.

I think the safety knowledge, even for the high power is nessecary, though.

> Now the second part - what privs go with what license/test?

This is probably going to be what we have now for Technician, General, and Amateur Extra with slight, or not so slight, modifications.

For Technician class adjusting the question pool and limiting the power makes it a reasonable foundation. One thing is they, at the very least, should be given the same privileges as Technician Plus. I think the FCC plans on this grant by the way they've not handled the database issue. ;-)

That leaves Novices who can take Element 2 if they care for all the privileges above 50 MHz. Otherwise they remain as is.

For General Class, I don't know what the consensus would be but, as the numbers of Advanced class operators decline the Generals may assume Advanced subbands on 15, 20, 40, and 80 meters. The Advanced would have high power there and Generals the medium power so sharing the same subband edges seems reasonable.

Amateur Extra class should have an additional examination for VE status.
That's all I can think of for that class.

You have also alluded to moving the forty meter band and other issues which were not licensing changes.

fail to
> catch any hint of a clue.

Well, I was going to mention a paradigm shift in how you think about CW. It's just that when you send code you transmit dits and dahs. This is not CW. Transmitting CW, ends up the same but to think of it correctly, you transmit a continuous wave upon which you insert bit spaces, letter spaces, and word spaces which encodes the signal with morse code. If you don't like that analogy, please, don't kill the messenger. ;-)

I also draw about 2 amps on receive with my TS440. If I run a series of dits, it draws about 8 amps. Using my straight key and steady keying draws close to 18 amps. I also use an Astron PS, but switched from an RS20M to an RS35M a while back. I generally run it at about 80w even though it is capable of 100w.

Thanks for the info on the solar panel set-up. I'm going to check into it.

Jim:

If code testing is ever abolished, the one thing that absolutely should NOT be done is to change the current subbands within the amateur allocations. IOW, keep the Novice/Tech Plus subbands as they are -- CW/digital only, >200w. No phone band expansion. Expanding the phone bands makes no sense, when all throughout the debate on code testing, the main argument used by those seeking to eliminate same was the fact that digital modes were the future of the ARS. So, let's not junk up our present CW/digital operating space with phone emissions. CW would remain to be authorized everywhere, of course.

The no-coders promised a digital paradise; now it's time to put up or shut up!

From: Dick Carroll dickc58@worldnet.att.net

> I said it once already - check with ED HARE, that was his phrase which I
> just picked up, *understood exactly what he meant* and merely used again.

Actually, Dick, my original use of the phrase was in response to Cecil, who said that in his professional (digital) experience, if it wasn't a 0 or a 1, it was broken. I posted one word -- "tristate."

What was pointing out is that in the digital world since the 1970s, digital circuits can be 0, 1 or not there -- the tristate mode.

I think that somehow, this got confused with Morse code. Not having been involved in the early part of this thread, I offered that the off state in OOK CW can be likened to the off state in digital circuitry, commonly known as "tri-state."

Now, whether OOK CW is a dual state or a tri-state mode depends on how one thinks about it and how it is encoded, IMHO. If, for example, one could use the off state to represent a 0 and the on state to represent a 1. In that case, OOK CW is binary.

However, in modulating signals, what is a logic 0 and what is a logic 1 can be determined by any defined state, from the above off=0/on=1 state to the states defined by FSK, PSK and any of a number of "digital" modulation methods.

So, if one is sending Morse-encoded OOK CW, it becomes a matter of semantics as to what level represents what bit state. Is the letter A 10111000 or is the "dit" a 0 and the dah a 1, giving 0-tristate-1-tristate?
Or is it 0-tristate_element_space_length-1-tristate_character_space_length?

IMHO, the off-state of OOK CW most physically resembles the off-state of a tri-state digital device, so if one really needs to make this more than the joke I had made, then the analogy is not a flawed one. Neither are the ones that Cecil is discussing, either, and, in the case of Morse encoding, at least for human decoding of same, 0 and 1 really have no meaning. To me, the overall sound of di-dah registers as a A.

Now, you are probably missing the real point of this, Dick. I think that Cecil has taken a position and kept this going primarly to get your goat. In this case, it appears to me that he has suceeded.

It's not quite that simple, I am sure, Dick. The League keeps its investments at a level sufficient to fund life-member membership services and to ensure some cushion against the ups and downs of running an organization. In some years, the budget has run at a deficit; in other years, the mandate has been to put the money back into investment.

it ain't that hard. Also, a simple request from the FBUI to your ISp will
have those telco logs open so fast, you won't have time to say anything
at all.

So,
> let's not junk up our present CW/digital operating space with phone
> emissions. CW would remain to be authorized everywhere, of course.

This REALLY scares the hell out of me, but I agree FULLY with Larry
on NOT diminishing the space available for digital modes (including
"CW") by expanding the space available to SSB. (WHEN, not if,
code testing is abolished :-)

I also agree with Larry on keeping the lower power limit in at
least those parts of the bands. As I've said many times before,
there's much more to be gained with better modulation and
coding techniques than through brute force power.

Unfortunately (in terms of protecting our allocations in the future),
our bands are FAR from "overcrowded" in any reasonable sense
(looking at spectrum usage compared to other services). I see
NO need to expand the use of SSB at the expense of the digital
modes and believe that to do so would be a bad move.

However, it's inaccurate on Larry's part to assert that "the
main argument used by those seeking to eliminate (Morse
testing) ws the fact that digital modes were the future of the
ARS" ... the MAIN argument for eliminating Morse testing
is and always was that it is no longer justified as a legitimate
regulatory requirement for obtaining a license with full HF
privileges.

> The no-coders promised a digital paradise; now it's time to put up
> or shut up!

The statement above is also inaccurate, Larry ... I assume
you're referring to some of my comments, at least in part ...
I didn't "promise a digital 'paradise' " ... what I said was that
there were benefits in adopting more modern, effective
technologies and that the ARS should take advantage of those
benefits, rather than staying stuck in the past forever.

This is nonsense. I fly with several radios and GPS units all the
time.

I have never had to "explain" anything. In fact I have never been
asked to turn one on. Since Sept. 11 I have flown at least 30 times
both in the US and Europe same story every where no problems
with the radios. What I do pack in my luggage are long sharp antennas.
I have had no problem with rubber ducks not even a question.

Packed in the suit case and it is vulnerable to theft and the
airline is not responsible for electronics in luggage--read the
ticket.

Take it on board leave it off and in your bag and don't worry
have a nice trip.

the radio.

SO???? We do that all the time ... it's VERY common these days.

> (and we all know what can happen to installed software when we need
it most)

Backups, Arnie ... backups (both hardware and software ...) This is
the
most effective strategy to assure effective emergency communications.

> It's bad enough that we have to have a deep cell marine battery to
run the
> rig during emergency comms (those suckers are heavy) but now we have

get me
> wrong, I think advancing the radio technology is a wonderful thing
and I'm
> all for it, but where does the dependency on additional outside
equipment
> end?

The pros have backup systems ... so should we if we want the
best reliability.

> Next thing, I guess, is we'll all be toting mini sat-dishes.

Guess what ... that's EXACTLY what the FEMA folks do ...
they go into a disaster area and plop down a portable satellite
terminal ... vioila, no more dependence on the local infrastructure
which was quite probably damaged or destroyed by the incident

that brought the FEMA folks into the picture.

We could do the same with our satellites ... and, if we did, we'd
probably boost our leverage in getting free launches from NASA
and DoD by a bunch ...

> The more
> equipment involved, (and their inter-dependence on each other) the
greater
> chance for one of them to fail and crash the whole system. That's
(and you
> have to agree) one of the beautiful things about CW; basic equipment
and
> ease of use.

I don't (nor, to I "have to") agree ... I'd classify it as "primitive,
limited
capability equipment, with a requirement for an operator with less
than
universal manual skill" ... using cw for recreation is fine ... go for
it ...
but the emergency management folks just don't have any use for it
these days ... they want "tactical voice" on VHF/UHF for local, and on
HF-SSB for regional/long haul, and increasingly, they want computer
to computer data links so that they can accurately send large amounts
of data, pictures, etc. in short amounts of time.

> So, how do we balance one against the other? What are your
> thoughts, Carl?

See above ....

I agree with that. What we disagree on is whether an HF ham should
have the right to choose to learn Morse code or not. If he chooses
not to learn Morse code and then has a need for CW, that's his problem,
not yours or mine. I suspect if he needed CW bad enough, he would
learn Morse code pretty darn fast.

Don't have to. The claim was that information could not be extracted from an
unmodulated carrier. I should how I and many others have done it. QED.

>there read it?

I've read all of her stuff many times. Most of it in hardcover. First discovered "Atlas" 30 years or so ago. A dern good writer. Particularly when you know that English was not her native language.

Her descriptions of Taggart Transcontinental are based on the New York Central system as it was when the book was being written.

"Fountainhead" was made into a movie in 1949, starring Gary Coper and Patricia Neal. "Atlas" was supposed to be made into a TV miniseries about 20 years ago but it never happened because the network management changed hands.

"Atlas" is her masterpiece but in many ways "Fountainhead" is a better book.

How far along are you in the book? Have you reached the chapter where the story of the Twentieth Century Motor Company is told?

73 de Jim, N2EY

yes, I know who John Galt is.

The laptop draws about 1 amp if it's fused for 2. Add 2 amps for the receiver
and we have 3 amps constant draw just to receive.

How much does the PACTOR II box draw? As I understand it, PACTOR II is a
proprietary system that is not implemented with just a computer and sound card.

So it takes at least 3 amp hours to power that setup for one hour using PACTOR
II and 2 amp hours per hour using CW/Morse.

>As
>always, it's the transmitter that eats up the power

No, not as always.

> - up to 20 amps
>for my IC-706

Most "modern digital modes" have the transmitter running almost continuously.
So at the 100 W power level the rig draws
about 20 amps whenever in transmit mode, plus the 1 amp for the computer.

CW/Morse has a key-down percentage ratio of about 40% when transmitting.

So if it's in 100W transmit mode 50% of the time, that station needs 12 amp
hours for each hour of PACTOR II operation but only 5.6 amp hours for each hour
of Morse/CW operation

>and 50 amps for my 500w amp on SSB. I don't run the
>amp if AC power has failed.

50 amps at 12 volts is only 480 watts.

>> I can run my radio off of the deep cell for about 18 or so hours before I

>directly off the battery including my SGC 500 watt amp. I don't even
>hiccup when AC power fails.

Some critical design questions

How big (ampere hours) are the batteries?

How efficient are the batteries?

How many amp-hours will the solar cells provide per 24 hour period during bad weather?

At what voltage does the connected equipment stop operating?

What is the expected life of the various components?

Cecil's concept is basically a good one, but he may have less emergency energy capacity than he thinks.

Dick obviously has a computer ... and I'll bet it has a sound card
in it (if not, it's likely so old that it's incapable of running the
vast
majority of modern "mainstream" software) ...

Thus, he has the capability to use at least many of the more
modern, effective digital modes.

The fact that he CHOOSES not to exercise that capability
to be better prepared for emergency communications does
NOT constitutue an excuse to force everyone else to adopt
his favorite mode (cw) as the "least common denominator."

(Note that I'm not asserting that Dick is not free to choose
not to exercise the capability ... he certainly is free to operate
whatever mode(s) he chooses ... all I'm saying is that his
refusal to be better prepared is not a valid reason to insist
on dragging everyone else down to his level ....)

We don't disagree on that, Cecil. If you recall, "Know Code International" advocated a much higher written standard if the Morse testing was abolished. We said that it wasn't about the Code test, per se; it was about keeping high standards. What the FCC did, IMO, was lower the standards at both ends. We are still waiting for the floodgate of new Hams to arrive. What I have seen since restructuring is a lot of General and Extra upgrades, but not much more beyond that.

We certainly agree on the last part of your post. If someone doesn't know Morse and needs it, that's their problem. I'd advocate that everyone learn Morse at least at the 5 wpm level. Notice I didn't say be tested on that skill. Then, in the event that they needed it, wallah, there it is. I personally don't believe that 5 wpm Morse is beyond the ability of 95% of the Amateurs out there. I started out at 0 wpm and worked my way up. After 8 years on CW, I think I can head copy about 6 wpm now : -))

GSM digital phones, for instance, carry digitized voice or data.
I see a mode something like that taking over most all amateur
communications in the future. So sub-bands will be obsolete.

BTW, Larry, which no-coders promised a digital paradise?
Please be specific.

I classify SSB as "old" and "primitive" compared to the newer technologies.
Yet, it is still widely used in emergency communications because of its
inherent reliability and simplicity of use.

>
> but the emergency management folks just don't have any use for it

>

Yep, I agree that high speed computer data links and tactical voice are the
wave of the future in emergency operations. Yet as long as we are using HF
radios, Morse will have a place. You are very much wrong when you say that
it is not used (CW) in HF emergency communications. Our County EOC has been
CW capable (and will be) far into the foreseeable future. The way the EOC
folks explain it, "Why get rid of something that we may need to use, as long

as we have qualified operators available." During our last actual activation, Morse was used to send and receive numerous messages via HF when SSB operations were being hampered by QRM, QRN, and QSB. It's the old have the tools in the toolbox theory.

Ship your rigs via FedEX. Ship all valuable items via FedEX. You can purchase insurance and they are very unlikely to loose it. This allows you to ship all you want. Read your ticket information. The airline won't do much for you on your return flight, if they loose your stuff. They figure that you are at home and should have more stuff there. Ship them to your motel room or the place you are staying. Carry on bags should include a change of cloths, cash and documents needed when you arrive. never put all of your clothing in your checked baggage. To much hassle when the airline looses them. One last thing always have contact information in your bags. The tags on the outside can get lost in handling.

No, there is no point to asking "technical questions" about cw in the
exams beyond one question to which the answer would be "ayup, it's
dots, dashes and spaces". That's completely inadequate for licensure
to use the mode.
>
>

On the high end my PC cost me $2,300, a decent mutimode HF xvcr is in
the same range. On the low range a 486 doorstop and a used junk xcvr
might be had for what, $600? I could cobble together a usable junkbox
cw station for $150 (which I've already done) or anybody can pop for
one of the very inexpensive cw xcvr kits from MFJ or Ten-Tec. Which do
not have com ports. How many thousands of those are out there?
>
>
Your asumption that every ham or even a large fraction of hams have
computers and/or have any interest in taking a computer into the ham
bands simply highlights your cluelessness wrt to what ham radio is
really all about, particularly HF ham radio. Ham radio is not
digi-centric, you are whence cometh your problem.

Ya just closed the loop. The HF bands are not under fire, the
vhf/uhf/microwave ham bands certainly are endangered. Simple logic
dicates that those bands are where more occupancy needs to happen, not
only that but those bands are wide open for experimentation without
getting tangled up in interfernce issues and the right regs are in
place. But we been here before Sqiuggy, you haven't done a thing about
getting any kind of advanced technology up and running. Except to
bitch about the TAPR thrust to do that. Windbag.

Never say never Larry... if they move 40 meters there will need to be a
change.

> IOW, keep the Novice/Tech Plus subbands as they are --
> CW/digital only, >200w.

Larry, there are NO CW/digital only subbands for Novice/Tech Plus. What are
you talking about? Of course, they don't have a phone subband either, only
CW/ssb. They do have one CW, RTTY and data subband. Novice and Tech plus
numbers are decreasing rapidly but these subbands may very well be relegated
to the Technician class in the absense of Element 1.

> No phone band expansion. Expanding the
> phone bands makes no sense, when all throughout the debate on

> same was the fact that digital modes were the future of the ARS.

Right, well, maybe just a slight change. I think for now, as the Advanced
numbers decrease the Generals could move to the Advanced subbands because
with a three license structure you don't need three subbabnds for two
licenses.

> So,
> let's not junk up our present CW/digital operating space with phone

I believe the CW, RTTY and digital subband should remain as is.

Nope.

I am simply pointing out that the same charge of "Morse testing is not
necessary" can be made against most of what is in the written tests -
particularly the General and Extra written tests.

>Take it to the FCC if you want.

I won't. But somebody else will.

> I and the most other NCI
>BOD believe theory knowledge is good.

So do I. But why MUST it be tested? Why MUST the FCC force it down people's throats with all that written testing just to get a license?

> I don't have to
>defend that unless the FCC suddenly
>wanted to change that.

At which time you will be listened to the same way the procodetest folks were listened to.

>The FCC has already accepted the
>idea that morse testing is no longer needed.

And they've already accepted the idea that less written testing is needed.

>
>How do you define HARD? What is the measurement?

I define it as how much you actually have to know about radio to pass the test. From the POV of someone who has designed and built more ham rigs from scratch than I have owned ready-made, the test just wasn't that hard - it didn;t require that much radio knowledge. Nor does it today.
>

Of course it exists - you just don't see it, or don't want to see it.

>Disagree all you
>want, the FCC doesn't see the parrallel either.

Not yet.

>They (the FCC)
>are the ones you'd need to convince to change anything. The R&O
>is almost 2 years old...NCI doesn't have to "see or acknowledge"
>anything...and even if we did, so what...it would impact nothing.

Exactly.

My point is simply this: When someone preaches about "eliminating unnecessary barriers to a license" they cannot logically say the Morse test is a barrier but the written tests above Technician are not. That the FCC or others don't see it is immaterial.

A simple question: Why is the material in the General test needed to operate a transmitter on 28.150 MHz but not needed to operate the SAME transmitter on 50.150 MHz? Why is the material in the Extral test needed to operate a transmitter on 21.020 MHz but not needed to operate the SAME transmitter on 50.050 MHz or 21.050 MHz? "Because the FCC says so" is not a valid answer.

The PTC2e draws 1/2 amp.

> > So it takes at least 3 amp hours to power that setup for one hour using PACTOR
> > II and 2 amp hours per hour using CW/Morse.

Nope, that's not true. PACTOR II uses 16DPSK modulation and so enjoys a
considerable noise margin over CW/Morse. I believe that margin is around 6dB.

> > Most "modern digital modes" have the transmitter running almost continuously.
> > So at the 100 W power level the rig draws
> > about 20 amps whenever in transmit mode, plus the 1 amp for the computer.

Ah, but most modern digital modes don't require 100 watts to function. While
the CW transmitter is outputting an average of 50w, the PACTOR II transmitter
is outputting an average of 12 watts for the same S/N ratio. Thus the PACTOR II
setup draws much less current than the CW setup. Plus PACTOR II has a throughput
about 50 times higher than CW so CW consumes many magnitudes more power over all.

> > Cecil's concept is basically a good one, but he may have less emergency energy

Maybe so, but magnitudes more than if I was using CW. :-)

In the late 50's, the AMers said that SSB was too unreliable and too
complicated to be used for emergency communications. :-)

It's apparently not going to happen which means the FCC set the standards
at just about where they need to be. Technical folk find the testing
easier than it once was but technical folk are the type of hams we
need. Non-technical folk don't find getting a ham license appreciably
easier than it was before since the written exam was always the hardest
part for them. Not much has changed.

Half an amp but I can usually lower the transmit output
power and more than make up the difference. For instance,
increasing the power consumption by 2 amps to support the
laptop and PCT2e allows me to run ten watts output thus
reducing the transmitter power consumption by 15 amps.

AND it has disturbed the energy in the wave either way. As my
college EE prof once said: "Everything you make a measurement,
you make an error."

> Don't have to. The claim was that information could not be extracted from an
> unmodulated carrier. I should how I and many others have done it. QED.

But you disturbed the energy in the wave in the process.
Therefore what you received was not a continuous wave.
The mere detection of the wave caused the wave to be
discontinuous. Reference quantum physics.

What, when one is "forced" to learn Morse code to use it? Why, Ed, you commit sacrilege!
What I am still waiting for is for Cecil and Squiggy et al to fulfill their promise of an advanced digital revolution they promised if CW testing would just go away. What I want is a single box that will do all that now demands a rats nest of fragile cabling and shakey,crashprone software. They insist it has all been so posssible for so long yet none of them deliver, instead just hang out on HF SSB. Just as predicted.

All US HF hams are forced (required by circumstances) to learn Morse code, Dick.
No-code techs are the only hams who can use Morse code on the air without being
forced to learn it. Go figger.

> What I am still waiting for is for Cecil and Squiggy et al to fulfill their

I haven't been on HF SSB for more than six months, Dick. In fact, the
only mode I've used in the last six months is my favorite, CW.

In my mind, tri-state is when you shut the rig down or when you're not transmitting and someone else can have the frequency. That is the main use of tri-state is to not assert yourself on the bus in order for another circuit to assert the bus.

> What was pointing out is that in the digital world since the 1970s,
digital
> circuits can be 0, 1 or not there -- the tristate mode.

Right, tri-state on bus structured systems tend to be high impedance and with a pull-up/pull-down arraingenment for a quiescent voltage ~ 1.4 V in between a 0 and a 1.

> I think that somehow, this got confused with Morse code. Not having been
> involved in the early part of this thread, I offered that the off state in
OOK
> CW can be likened to the off state in digital circuitry, commonly known as
> "tri-state."

Yes and no, I think that's the 'not transmitting' mode.

> Now, whether OOK CW is a dual state or a tri-state mode depends on how one
> thinks about it and how it is encoded, IMHO. If, for example, one could
use
> the off state to represent a 0 and the on state to represent a 1. In that
case,
> OOK CW is binary.

I wrote in another response that CW was when you transmit a continuous wave and modify the transmition by inserting bit spaces, letter spaces, and word spaces which encodes the morse. The crux of that is don't think about sending dits and dahs but think about modulating your continuous wave with

well spaced spaces. ;-) Then it becomes apparant that it is binary and if you use the word tristate... reserve it for when your listening.

Now you'll tell me your spaces are tri-state because someone else could 'break-in'. Of course you know, in a bus stuctured system, the bus is usually low true and if someone assert a 1 on the bus it's entirely possible (but not kosher) that another board could assert a zero and the zero would win.

> However, in modulating signals, what is a logic 0 and what is a logic 1 can be
> determined by any defined state, from the above off=0/on=1 state to the states
> defined by FSK, PSK and any of a number of "digital" modulation methods.

PSK31 idles with a constantly changing phase... 0's when the phase doesn't change is how that encodes a 1 and they're off to the races. I wouldn't call the idle time tri-state time though because no one else can assert themselves.

> So, if one is sending Morse-encoded OOK CW, it becomes a matter of semantics as
> to what level represents what bit state. Is the letter A 10111000 or is the
> "dit" a 0 and the dah a 1, giving 0-tristate-1-tristate?

Well, 'on' is usually considered a 1 or true or high but I have seen negative logic systems where a 1 is low. One system I did used -12V for VCC because PNP transistors were faster. The whole system was built on NOR logic rather than the typical 7400 series NAND logic and +5. It was before 7400 were invented. I mean 5 or 9 input NOR gates are wierd to get used to we called them B-Fog's short for big fogging gates. ;-)

> Or is it
0-tristate_element_space_length-1-tristate_character_space_length?

Highly unlikely... ;-)

> IMHO, the off-state of OOK CW most physically resembles the off-state of a
> tri-state digital device, so if one really needs to make this more than the
> joke I had made, then the analogy is not a flawed one. Neither are the ones
> that Cecil is discussing, either, and, in the case of Morse encoding, at least
> for human decoding of same, 0 and 1 really have no meaning. To me, the overall
> sound of di-dah registers as a A.

Yes, if you consider that someone can break in on your transmission, during the off time, then the 0 or 'off' state is a 'tri-state' state then,,,
'tristate' is NOT 'on' therefore...
'off' is NOT 'on' therefore...

'tristate' is 'off' therefore...
'tristate' is the same as off...
so it still has two states; one state has two names.

If we wanted to be more clear then we would say OTK... ;-)

> Now, you are probably missing the real point of this, Dick. I think that
Cecil
> has taken a position and kept this going primarly to get your goat. In
this
> case, it appears to me that he has suceeded.

OOK CW is binary. That my assertion, mox nix what Cecil or anyone else says.
Unless they can prove it's not binary. It is what it is, ;-)

I agree with most of that, Larry. But I also expect that support for more room for 'phone will grow to the point that the 'phone bands are widened again and again.

Or an organization with a name like "No Subbands International" will arise...
>
>The no-coders promised a digital paradise; now it's time to put up

That is incorrect for a very basic reason. There are far more CW capable `ham stations than there are Pactor2 stations. That is unlikely to change in the forseeable future, if ever.

And if you think there are not many CW capable hams you haven't listened to the HF CW bands on a contest weekend.

So you were an AMer then and stated untruths then, as you do now? It's odd, I was around then and heard no such nonsense.

What a BS story ! So tell us, o wise ass, just how an antenna disturbs a transmitted wave differently when his receiver is on than when it is off? Doesn't happen, on any level. The impedance of space is constant at 377 ohms, whether or not all the receivers in the world are turned on or off that particular frequency. The receiver loading of a wave once launched into space cannot affect the transmitter.

It is incorrect that my PACTOR II setup consumes less power running ten
watts than my transceiver consumes running 100w CW? Dick, you really
need to study the ARRL Handbook a little closer.

You've got to be kidding. Seems all I heard was how those single-sidewinders
were going to ruin amateur radio. When did you get your first license? And
I never ran AM. My first voice contact was in the late 60's and it was SSB.
I didn't have a voiceband XTAL for my Globe Scout and my ARC-5 was CW only.

Got any idea what :-) means, Dick? What I am saying if there were a "single easily portable box" that would decode CW, then nocoders would buy it.

We are not talking about the transmitter, Dick. If a receiver exhibits a
different load when it is on than when it is off, it will affect the
received wave differently. If there is a load resistor in the receiver,
at least some of the received wave is dissipated in the resistor. That
dissipation causes the received wave not to be continuous. When you
detect a wave, it, by being detected, ceases to be a continuous wave.
The only continuous wave possible is, by definition, one that has not
been detected.

Only undetected waves can possibly be continuous. So exactly how are
you going to prove that continuous waves exist?

I think the FCC will simply issue some sort of "waiver" of Element 1 until the
necessary paperwork is done to remove code testing from the rules. In other
words, they could say that anyone with a valid Tech ticket or above
automatically has Element 1 credit.

The correct numbers are 3.5 amp hours and 2 amp hours to RECEIVE.

> PACTOR II uses 16DPSK modulation and so enjoys a
>considerable noise margin over CW/Morse. I believe that margin is around 6dB.
>
Maybe. The power required to receive a Pactor 2 signal is still almost double
that required to receive a CW/Morse signal.

>> Most "modern digital modes" have the transmitter running almost
>continuously.
>> So at the 100 W power level the rig draws
>> about 20 amps whenever in transmit mode, plus the 1 amp for the computer.
>
>Ah, but most modern digital modes don't require 100 watts to function.

Neither does CW.

>While
>the CW transmitter is outputting an average of 50w, the PACTOR II transmitter
>is outputting an average of 12 watts for the same S/N ratio.

Let's see...

6 dB is 4 times the power. So if the PACTOR II box is putting out 12.5 watts,
the CW box will theoretically need to do 50 watts for the same S/N.

However, the CW box has an on-time of 40% maximum. So 50 watts of transmitted
power averages out to 20 watts.

Thus, for the same S/N, the CW box needs to AVERAGE 20 watts on TX to match the
PACTOR II box's 12.5 watts.

The computer and PACTOR II decoder draw a total of 1.5 amps at 12 volts. That's
18 watts.

So the total system power requirements for the same S/N works out like this:

CW rig needs 7.5 watts more TX power than the PACTOR II setup,

BUT

The PACTOR II setup needs 18 more watts to power the TNC and laptop.

Difference: 10.5 watts (almost an amp at 12 volts) in FAVOR of the CW setup.

>Thus the PACTOR
>II
>setup draws much less current than the CW setup.

Nope. Do the math. The CW setup wins on the power scenario, receive or
transmit, at the power level you specified..

> Plus PACTOR II has a
>throughput
>about 50 times higher than CW so CW consumes many magnitudes more power over

Not when you include the PACTOR II throughput edge over CW. In that
minute that it takes you to send 20 words, PACTOR II can send 960
words. How does one minute of PACTOR II operation compare with 48
minutes of CW operation as far as power consumption?

> > Plus PACTOR II has a throughput
> >about 50 times higher than CW so CW consumes many magnitudes more power over

Way to go, Arnie! That is just what I am doing. Some of what I have seen some say in an attempt (futile?) to preserve code testing in its present form would undermine that effort if there were no code testing. I think all of us should be careful not to say things we will have to deny later! :-)

I see it quite differently, Arnie. I believe that, as a whole, Amateur Radio should be as diverse as possible to get the job done. That way, no matter what type of problem crops up, there will be a solution at hand.

I think the real discussion here is to what degree configuring the Amateur Radio Serivce to get the job done should be a matter of the self-training aspects of Amateur Radio vis a vis the regulated testing requirements to enter Amateur Radio. For all modes but one, the former seems to be the dominant factor. I believe that even for that singled-out mode, it would still be a dominant factor in hams choosing to use a mode that has significant utility and use.

>Ya just closed the loop. The HF bands are not under fire, the
>vhf/uhf/microwave ham bands certainly are endangered.

The threats to HF are significant, not necessarily from an allocations point of view, but from a growing problem of power-line noises, DSL and cable leakage, home networking and a host of other things that have been authorized under Part 15 for decades, but are just now coming into widespread use. Occupancy will become moot if the band is filled with unlicensed S9+signals.

Jim, I like that! No Subbands International. Great, and we might see it. Perhaps if the phone bands are expanded to be legal anywhere, we could add a "super" class ticket, higher than the extra. To obtain this license, all one would have to do is bring their export radio with echo mic and roger beep to the exam. They would be given the ticket immediately, along with any callsign they desire (even WWV). Oh, they would be allowed 5,000 watts at 150% modulation also.

73 from Rochester, NY

Paul set up an automailing of a "Welcome To Rec.radio.amateur"
FAQ to welcome new posters to the rra newsgroups. It's an
excellent idea for a new poster to immediately receive the auto-sent
FAQ rather than waiting for my sporadic posting of it (I used to
post it monthly, then 4 times per year, then...) It's a one-time
mailing, so no one should get bent out of shape for having received
it. The few complaints ISPs have received have been immediately
dismissed; apparently they too feel it's a great idea.

Paul's new call is K3FU. When someone gets a new call, their old
one can still show up at some sites. My old WH6U along with my
newer call still pops up on the callsign.ualr.edu 2000 telnet site.

73, Jeff KH6O (poster of the rec.radio FAQs, when I get around to it!)

I don't know if the horse is dead, but it appears that the horse-beating stick
is getting a bit frayed. I think everybody understands OOK CW and folks are
just trying to make it look like their "opponent" does not. :-)

Oh it could get worse. From Heisenberg we could easily go to inflation of the universe, string theory, the Standard Model, and whether the big bang was a tunnel diode phenomenon (I kid you not) on a quantum scale. We have not yet begun to fight; we are limited only by the symbol sets on our keyboards. e to the u du dx, e to the x dx, secant cosine tangent sine, 3.14159.

If you like Kurt, whose theme in all his work is "Be nice, god-damn it!",
you would
love Orson Scott Card whose work has the underlying theme of "right
conduct".
Get a copy of "Enders Game", "Speaker for the Dead", or the five books in
the
"Tales of Alvin Maker" collection, especially "Heartfire" -- I dare you to
try lay that
one down!

With all kind wishes,

de Hans, K0HB

That is a good answer, Kim. I wonder why Carl didn't think of that?

A continuous wave probably can exist, Ed, but one cannot prove that it exists.
It is essentially the same problem as trying to simultaneously determine
both the mass and position of an electron.

If you detect a continuous wave, it ceases to be continuous.
Seems we must rely on faith for the existence of continuous waves. :-)

That's all well and good but if the directors go off on a tangent and
begin addressing other issues which are not part of posted policy, they
are not being given a voice as to whether they are in agreement.
There is no known mechanism for "unjoining". I don't know of any other
membership organization which operates in the same manner.

Yeah the lower 25s of 160, 80, 40 (the treaty already settled the
matter of the cw setaside on 30m), 20 and 15m, absolutely, makes huge
sense, let's go for it.

basic
> > equipment and ease of use. So, how do we balance one against the other?

But ease of use requires a specific skill set to be able
to send/receive. That being the case, in an emergency ONLY
the ham can be the operator. Most other modes allow for
anyone to be the operator and the ham can "be there"
as control operator. That allows the ham to let emergency
people directly communicate with each other even though they
no knowthing about the ham radio, etc. There is a beutiful
simplicity too in just being able to use the mike button/push
to talk. Balance one againt the other? The world has
already done that by default.

Cheers,
Bill K2UNK

WHY would anyone configure there ability to as small an inventory as
possible. Far better to have multiple capability and multiple rigs
if personal finances, space allow.

Equip for morse if you like, nobody is attempting to end your
ability to do so. The fact remains that your county EOC is
an anomoly in today's EOC preparations efforts. Far more
want modes that allow the ham to be the control operator
while allowing other (non-hams) to also directly communicate.

Yet there is NO prohibition in the rules that forcloses a ham
that has never passed a CW test from using morse code...is there?
ANY "nocode tech" can decide to operate morse (CW) in
the ONLY two exclusively CW bands (50.0-50.1 and 144.0-144.1)

without violating any rules...therefore, the FCC must not feel
such a skill test is NOT needed to operate morse.

Alright then, WHY is it the WRONG thing?
We've had over 10 years of that process with no
bad results. What is the problem that needs to
be fixed that would require demonstrations
of competence in any particular mode or modes?

Cheers,

I'd have no problem with that. I will note, however,
that I speak only for myself on that issue, not NCI as
a policy position. The whole area of bandplans doesn't
much concern me. I long ago said I'd support having
CW only for the first 25 KHz.

Wrong again...
The initial set of NCI BOD membership was self created by a core
of the founding members of NCI. All the current directors have
been re-elected by the membership.

Why do you think an NCI member has no voice. We (the NCI
BOD members) do recieve input from the members throughout
the year...as does ARRL directors.

> There is no known mechanism for "unjoining".

Anyone that wants to "unjoin" is free to do so. A simple request
by email or snail mail will suffice.

> I don't know of any other
> membership organization which operates in the same manner.

Except for the annual dues that many other organizations
have... whereby failure to pay results in a member being
dropped, NCI operates on very similar processes as do other
organizations. Most BODs for other orgs (eg. ARRL) are
free to set policy. Did anyone that is an ARRL member
vote to approve the ARRL shifting it's position to not
oppose an end to code as a treaty requirement? Most any prganization
establishes a range of allowed policy setting to the BOD rather
than calling for an all member vote on every action/issue.

Ah yes, you're the dipstick that insists that since PSK31 has an "advantage"
over CW, when I can hear the CWID but the PSK is too weak to copy, that's OK
because PSK has an "advantage"! heh heh heh! Whatta dip!

"Hey, Boss, I can't copy PSK, the signal's too weak, but there is this CW station that's coming through fine". "Sorry, son, can't use it. It's a poor mode that won't work as well, hey, just because you can copy it when you can't print PSK means nothing!!"

You dingaling.

By who? ARRL? Certainly wasn't done by the FCC?

SO! The 1975 "vote" you mentioned above was NOT of
ALL licensed hams then? Good, glad you cleared that up.

> >> >Once the treaty changes, the issue becomes the individual

> >
> >If so, then why should I care?
>
> Little thing called democracy...

FCC rules are NOT set based on democratic voting
of ONLY licensed hams! FCC rules are set to establish
public policy. Such rules can NOT be the sole
result of only ham "voting" anymore than bradcast
rules should be exclusive to owners of broadcast
licenses.

> >> > Will NCI support a vote...I sure wouldn't

> >NCI has so little influence, there sure is enough inerest
> >in making us go away or compromise.
>
> The interest is in pointing out errors in NCI arguments.

The reality for us (NCI) is that the only place all that counts
is in the comment process. We, NCI, will continue our
efforts predicated on obtaining our goal. If you believe
as strongly as you seem that the FCC's mind is made up, then
we, NCI might be wasting our time, but we (NCI) would
rather do what we feel is needed to assure ourselves we have
done everything possible to get the outcome we want.
If you are convinced the FCC's mind is made up, I'll
be surprised IF you file any more comments on the issue
if/when it is opened for public comment again by the FCC.

> >> > IF we (NCI) were truly of

people's
> throats with all that written testing just to get a license?

IF you believe it shouldn't be, then petition the FCC for the
change. I am not here to provide those answeres for you.
IF it ever came up via the FCC, I'd spend the time and effort
to defend the theory as being needed. For now, your
question is just an academic waste of my time.

> > I don't have to
> >defend that unless the FCC suddenly
> >wanted to change that.
>
> At which time you will be listened to the same way the procodetest folks
were
> listened to.

You have so little faith in the FCC. The fact
that the procode test advocates did not prevail is
not an indication that the FCC didn't listen to them.
In fact, the R&O went into considerable
detail to address the specific arguments raised
for preservation of code testing. Did the FCC
miss any procode test arguments in their reply?

> >The FCC has already accepted the
> >idea that morse testing is no longer needed.
>
> And they've already accepted the idea that less written testing is needed.

We disagree that such is the conclusion to be reached
because of the changed testing and licenseing.

Nor did it 50 years ago. It is easy for me to see that the knowledge
needed 50 years ago was well within the ability of most people to
learn on their own if they wanted to.

No, you want to play this game of "if you are in favor of
ending morse testing, you must be also working to make
the written harder". I won't play...although I have on
severla occasions submitted comments to the VCCs as to how
to make the testing better (not easier, better).

> >Disagree all you
> >want, the FCC doesn't see the parrallel either.

You're dreaming, Ed. The more "new modes" that are out there the less likely that any serious percentage of hams will be using any one, certainly no one will be in as widespread use as CW. There are now enough that the ARS is fairly well disipated across a numer of different modes. Which one will be "the" mode of choice?

The US military does it that way. They take *just* what they need and travel as light as possible. The US Army converted to fast and "light" units many years ago. The idea is to get the most bang out of the least amount of equipment.

>

We disagree on this one. There are many EOC's that still have Morse capability. All that is required is the addition of a set of paddles or key. Most EOC's can swing that additional (minimal) equipment requirement.

Question: Are you implying that the EOC operates as some sort of third party traffic with the Ham as control op?

So what is the solution? Take steps to limit the number of operating modes that Amateurs might use? That sure doesn't sound right. CW is not the mode that is most often used for emergency communications by a long shot, so no regulatory solution, IMHO, should be based on a mode that is not the most widespread.

> There are now enough that the ARS is fairly well disipated
>across a numer of different modes. Which one will be "the" mode of choice?

Which mode is the mode of choice right now for most emergency and public-service communications?

>Did it go to EVERY licensed ham?
>(NOTE - You actually answered this below)

I do not think that governenace by poll is the best way to make decisions. I am a licensed ham. Assume that I get a poll from the FCC about a subject I know nothing about. I look at my choices, think about it for 3 seconds, mark a box and send it in. Is that really useful input? I don't believe so.

IMHO, the process that the FCC uses right now, with a rulemaking process in which anyone is able to make comments any time they think it appropriate, with those inputs evaluated by FCC staff and a decision made by those who are charged to make such decisions is much better than allowing that decision to be made by people who may or may not know anything about it and who may or may not have spent more than a few seconds thinking about the issues.

I prefer that my governement make its decisions with input from knowledgeable people.

>Tit for tat, Dick. Where's your reference for the above information?

It wouldn't take very long poring through QST Product Reviews and manufacturers web pages to determine that virtually every HF transmitter sold today is CW capable, in however a rough form, using only the rig, a single commonly available connector and two wires to touch together. Virtually every rig sold today requires a separate piece of active electronics -- computer/sound card or TNC to be able to run digital modes.

>Or, are you using your crystal ball again?

I don't think any of us need a crystal ball for this one. :-)

Remember too, the digital modes are really just a modern
variation of RTTY (typed copy and printed readout.) The
ability to do that today is very inexpensive (used laptops and
desktop PCs are almost being given away). The additional
equipment needed to do digital is easy to accomplish.

As to "being prepared." I have said this before...BUT, if those
that profess a need to be prepared are thinking of that last
minute effort when a ham would cobble together some simple
CW transciever or to be pressed into service having not
previously done the "preparedness" activities...well, that's
not what be emergency prepared should be.

Those people that talk the talk (need for CE testing to
augment emergency preparedness), but do not, themselves,
walk the walk (participate actively with their local emergency
preparedness organizations such as RACES) have little or
no credibility intheir comments.

To allow only members of a governmental service to set policy
for that service would be against the interests of the
average American citizen. We don't want the ARS to become
like the US Congress. :-)

requirement.

Having it available doesn't mean it is used at all. Most EOC
and/or RACES have the ability (if they have HF rigs), but they
rarely, if ever, use it and few integrate CW into their practice
drills.

> Question: Are you implying that the EOC operates as some sort of third
> party traffic with the Ham as control op?

Absolutely! The emergency ops supported by hams more often
than not involve "3rd party" traffic such as police to first aid,
first aid to Red Cross, etc, etc.

>I also agree with Larry on keeping the lower power limit in at
>least those parts of the bands. As I've said many times before,
>there's much more to be gained with better modulation and
>coding techniques than through brute force power.

To go one further, I would support an overall regulatory reduction in our authorized power levels to NO MORE than 500W PEP on 160, 80 and 40, and no more than 250W on the rest of our allocations, including UHF and above.

If anyone thinks they need more power than that, they should apply to the FCC for an STA, and be prepared to explain why.

I would NOT support any restrictions on ERP, as this inducement would foster more experimentation in antenna design.

>Unfortunately (in terms of protecting our allocations in the future),
>our bands are FAR from "overcrowded" in any reasonable sense
>(looking at spectrum usage compared to other services). I see
>NO need to expand the use of SSB at the expense of the digital

>regulatory requirement for obtaining a license with full HF
>privileges.

It's still a legitimate application, Carl. And he was right on the digital modes arguement. One of the leading "justifications" was the proliferation of digital modes and technilogical advances in that field over manual telegraphy.

I agree completely and would also note that the vast majority
of people would look at that poll, see it has nothing to do with
them and throw it out. They'd not even mail it back. The idea
that the FCC would notice every person in the USA of pending
NPRMs is simply nuts.

> IMHO, the process that the FCC uses right now, with a rulemaking process

Agree again.

> I prefer that my governement make its decisions with input from
knowledgeable
> people.

I think that's true for the vast majority of amateurs who have
filed comments on any issue...BUT, in reality...
the process doesn't guarantee only "knowledgeable" people
will reply. The comment process creates the situation whereby only

"interested" people are most likly to do so. All "interested"
parties may not also be "knowledgeable" : -)

That process (coment period) has, however, served
the FCC and ARS quite well for many decades. Hams may
not have always agreed with the end result, either collectively
(i.e. in some of the loss of spectrum decisions) or as different
groups as in the morse testing issue.

Cheers,
Bill K2UNK

The new IC-746pro decodes and displays RTTY. All that is needed
for full RTTY operation is a keyboard.

> You dingaling.

Seems to me that this shows that NOT being
a part of emergency PREPARATION creates such
an uninformed statement. You do NOT need to hear
anything to copy the digital mode. It would be
pre-arranged that the digital transmissions would be on
XX.YYY frequency and all I'd need do is have my
station set to copy and send on that frequency. As already
stated, to do so requires advance participation in
emergency planning.

Cheers,
Bill K2UNK

more
> than 250W on the rest of our allocations, including UHF and above.

Steve,
Speaking only for myself, I agree with that concept too.
I might be more inclined to use 400 w which I have seen
used in some other countries already (e.g. Great Britain I think).

One example that justifies the lower power limit can be
taken from the typical DXpedition to some remote
site where thousands of contacts are then made all
over the globe with the DX station usually only running
about 100 watts and the vast majority of those contacts
are with other stations running similar or even lower
power. The "big guns" running the KW rigs don't
do it because they need the power, they do it to
"over ride" or simply "blast through" other contending
stations. That is, IMHO, pretty poor operating
practice..

The same is true for operating contests...although maybe
the time has come for the ARRL and CQ magazine
to begin imposing DE-multipliers for running high power.

> If anyone thinks they need more power than that, they should apply to
the
> FCC for an STA, and be prepared to explain why.

Agree again.

> I would NOT support any restrictions on ERP, as this inducement would
> foster more experimentation in antenna design.

Agree still and would add that enforcement of an ERP
would be just about impossible.

> Carl wrote:

OK by me.

But that argument, raised by (?) wasn't accepted as justification
to end morse testing. It was (IMHO) more the argument,
stated by Carl, that "the MAIN argument for eliminating
Morse testing is and always was that it is no longer justified
as a legitimate regulatory requirement for obtaining a license
with full HF privileges.

Cheers,
Bill K2UNK

Uh, yup, right, fer shure good buddy. How is it that you're going to enforce power output, but you can't enforce ERP?

And after it's all said and done, whether the ERP comes from amplifier gain or antenna gain, it's still the same ERP on the air, so all your high sounding bias against "big guns" is just so much envy, it would seem.

With all kind wishes,

Dick:

I've read Stranger in a Strange Land, none of the other sci-fi stuff.
I like my Sci-Fi on TV; don't have time to read it. I'm good for only
about a half-dozen novels a year, if that -- and Atlas Shrugged will
probably displace at least three of them. I read The Fountainhead
years ago, and have been wanting to read AS ever since. Started
to many times, but always had time conflicts, couldn't get any
traction on the book in the two weeks the library let me have it.
Since I know own it, I can whittle away at it. Maybe I'll have to
spend less time here and more time in the bathroom.

>I see you have not gotten to the soliloqy on the meaning of the light at

> They do not put all their eggs in ONE (i.e. small inventory)
> basket.
>

The military has a huge inventory of equipment (we agree). However, when they deploy, they develop a list of what will be required for the mission and take the *least* amount possible to accomplish that mission. That is what I am referring to as "light". In the "old" days, they would just lug it all with them. Operational and cost issues forced them to re-think this strategy and go with the "light" units concept. My point concerning emergency operations was the same. Take the least amount possible to accomplish the mission.

>
> Having it available doesn't mean it is used at all. Most EOC
> and/or RACES have the ability (if they have HF rigs), but they

> drills.
>

I agree that few integrate it into their practice drills (we don't), but I think you'll find that it has been used more than you think when actual EOC activations have occurred. I'm not saying that some guy down at the EOC is saying we *have* to have CW because it is so useful. What is happening is a CW op is using it when they are having problems getting through on HF SSB because of interference issues.

>
> > Question: Are you implying that the EOC operates as some sort of third

>

I've heard some third party traffic at the EOC, but it was never used as a mainstay. However, each EOC is different and I'm not doubting that yours

does it that way.

Don't applaud if that doesn't happen, Steve. If most of Amateur Radio continues
to be behind the technological times, it may be held against us somehow.

Had amateurs not been willing to abandon spark transmissions in favor of CW,
how long do you think their allocations would have continued?

NCI has been there/done that.

Almost. As I recall, when the nominations wer e closed, there were no nominees other than the existing Directors, so there was no need to vote. I see nothing wrong with declaring unopposed candidates elected, mind you; it happens often enough in elections. But, for at least the one election I know about, that is what the outcome was. When did that happen? Has NCI held an election since that time?

True enough, but at least then the FCC staff who evaluate those comments have something to evaluate. It is usually quite clear from reading the comments how knowledgeable the person is, what their interest is and whether they have put more than a few seconds thought and analysis into their comments. It is not at all possible to determine any of that from a check box on a survey form.

The digital modes in common use in Amateur Radio may meet that very narrow definition, but in the rest of radio technology, digital modes move hugh chunks of data that is printed readout, graphics, web pages, computer code and probably a few more that I haven't listed. In addition, much of the voice techology that is in use outside of Amateur Radio is also digital, utilitizing digital techniques to share spectrum orders of magnitude more effectively that the allocation of repeater pairs that sit idle most of the time.

You certainly can. Fancy (and expensive) antennas aren't very good and don't have any secrets in them, regardless of advertising hype.

A good antenna has to be large and installed in a clear, high place. No shortcuts work.

For a start. But I don't think you're serious.

> Do you also
> want to put a lower speed limit on operators there? :-)

Nope.
>
> Has anybody suggested making the lower 25kHz of every HF ham
> band CW-only?

Not formally. But 25 kHz isn't enough - it should be at least 50-75
kHz on most bands. Making just the Extra CW digital subbands CW-only
would mean that one would need an Extra to access them - not a good
thing.

As a bare minimum:

160: 1800-1850
80: 3500-3575
40: 7000-7050
30: 10100-10125
20: 14000-14075
17: 18068-18093
15: 21000-21075
12: 24890-24915
10: 28000-28075

>Why would anybody object to that?

Only reason I can think of is that they want the mode to die out.

Actually, I think Bill oversimplified things. The different layers
of protocol have different advantages. In particular, the forward error
correction of PACTOR leaves RTTY in the shade (even though both use FSK)
just as the forward error correction of PACTOR II leaves PSK31 in the
shade (even though both use PSK).

I'm sure one arbitrary number is just as good as any other arbitrary number, so I recommend 1499W PEP.

Of course I could hardly ever actually use that much power because 97.313(a) defines the REAL "legal limit".

Now the IODHW (International Order of Dismayed Hand Wringers) will rise up a group whine that nobody really pays any attention to 97.313(a), to which the obvious response is "So why would they pay any attention to your limit of 250 or 400 (or whatever)?"
